**Q1** Based on your general knowledge of organ donation and the presentation you just heard, do you support or oppose this new program?

**Q2** Even though a person has declared their wish to be a donor by enrolling on the NYS Donor Registry, family consent will be required in order to preserve a registered donor's rights if they die outside of a hospital setting. Do you support or oppose this requirement?

**Q3** When someone has a heart attack outside of a hospital, New York EMS will make every attempt to save the patient's life. If unable to save the patient, after exhausting all advance life-saving techniques, an EMS physician will declare the patient dead. With this program, a separate, specially equipped team will then be called to initiate a non-invasive medical procedure to preserve the body and transport the deceased to the hospital. Do you support or oppose this process?

**Q4** At the hospital, if the deceased's wishes are not known, the donation process will not proceed unless family consent is obtained. Do you support or oppose this process?

**Community Stakeholders Survey Data**
