BRIEFING PAPER

Office of Field Operations Phoenix Field Division Yuma Satellite Office Updated - August 2, 2011

SUBJECT: UI# 785041-09-0008, ATF Phoenix Group I, Yuma Satellite Office investigation involving suspicious activities by an individual who is acquiring large quantities of novelty grenade bodies and related components. This investigation is in support of ATF's Southwest Border "Gunrunner" Initiative.

PURPOSE:

- To brief the Assistant Director for Field Operations and Deputy Assistant Director, Field Operations of the status of this investigation.
- To brief the Country Attaché of the Mexico City Country Office (MCO)

BACKGROUND:

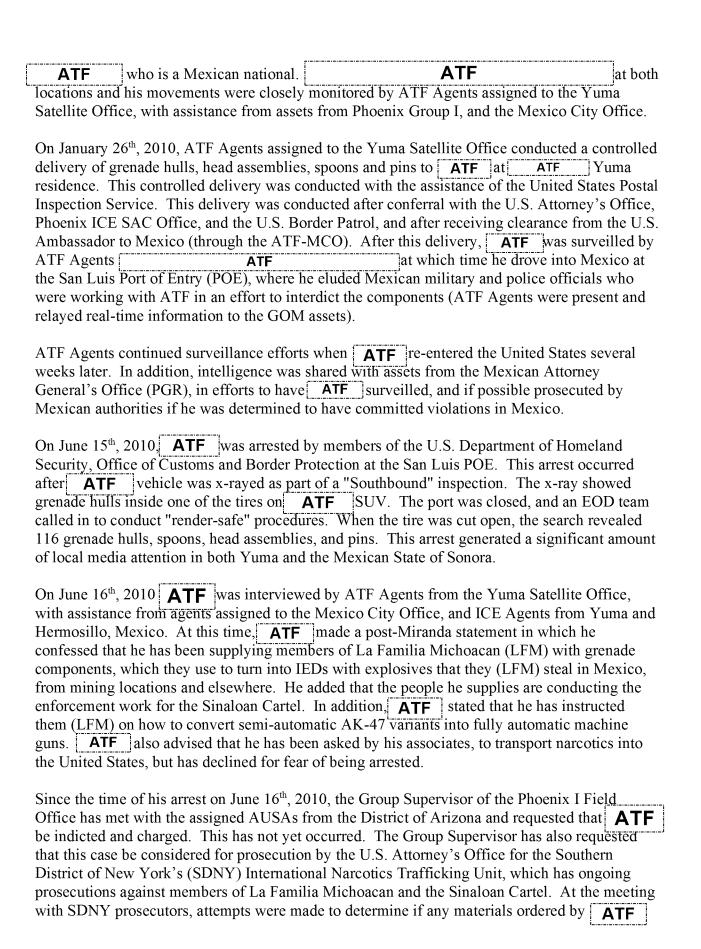

Since late 2006 the Phoenix Field Division has been analyzing the increasing use and seizure in Mexico of military ordnance, specifically hand and rifle grenades, on the part of Mexican Drug Trafficking Organizations (DTOs) in their ongoing battle with each other and the Government of Mexico (GOM). In 2007, Phoenix Field Division personnel along with Phoenix Explosives Enforcement Officer Tony May began working closely with the Mexico Country Office and GOM officials in properly identifying and inventorying previously seized hand and rifle grenades in order to better analyze the source of these items as well as put together an overall report on the increasing use of the same. In support of this effort the Phoenix Field Division, in conjunction with the U.S. Bomb Data Center, created the English/Spanish Southwest Border Ordnance Recognition Guide, ATF Publication 3320.10, dated August 2009. This publication was created in order to provide up to date information for Mexican law enforcement and military officials who are regularly seizing these items and have a need to properly identify and safely handle them. This guide is also being distributed to U.S. law enforcement personnel along the Southwest Border due to recent incidents involving the seizure of actual U.S. grenades as well as illegally manufactured grenades. A result of these efforts has led Mexico and Guatemala to acknowledge problems with internal inventory procedures of military ordnance, specifically hand and rifle grenades. This has led to a much closer working relationship with ATF and U.S. Defense Attaché Offices in these two countries and through this much improved relationship an ability to more effectively track the use and seizure of grenades. One of the concerns has been however that the Mexican DTOs are aware of this potential loss of a steady source of grenades and are availing themselves of other markets, to include the U.S. market for illegally manufactured improvised grenades. Unlike most countries the U.S. sells grenade component parts as "novelty items" which with the addition of fuzes and explosive substances can be readily converted to function as improvised grenades. Several ATF investigations along the Southwest Border over the past several years have resulted in the dismantling of improvised grenade

"factories" as well as the seizure of hundreds of improvised grenades destined for Mexico. The ongoing McAllen, Texas Field Office investigation referenced below is an example of this.

CURRENT INVESTIGATIVE STATUS

This Yuma investigation was initiated due to information gained from the ongoing Houston Field Division, McAllen Field Office investigation (UI#782055-09-0086) of an individual purchasing novelty MK2 (pineapple style) grenade bodies and then assembling them into functional explosive devices. During the Houston Field Division investigation information was obtained from the seller/shipper of these items that an individual in Yuma, Arizona had obtained 120 novelty MK2 bodies. The seller/shipper agreed to cooperate with the Phoenix Field Division in delaying the shipment of these items.

The Yuma Satellite Office has identified the recipient of the grenade bodies as ATF
ATF and DOB: ATF The Yuma Satellite Office verified that ATF and his family have had previous contact with law enforcement agencies going back to 2003 in
and his family have had previous contact with law enforcement agencies going back to 2003 in
relation to suspicious narcotics and alien smuggling activities. It should be noted however that
no criminal record has been verified for ATF at this time. Further investigation into
ATF history indicates a desire to start a company in Mexico and frequent border crossings. ATF is a Mexican national and ATF is a fluent Spanish speaker. In addition on December 5 th , 2008, ATF was involved in the purchase of
crossings. ATF is a Mexican national and ATF is a fluent
Spanish speaker. In addition on December 5th, 2008, ATF was involved in the purchase of
seven (7) AK-47 type WASR Rifles in Tucson, for which he paid \$4,600.00. When interviewed
by ATF Agents assigned to the Yuma Satellite Office, ATF confessed to having purchased
the weapons for re-sale, and admitted to lying on ATF F 4473. A case report was submitted
recommending ATF prosecution for "lying and buying," however the case was declined by
AUSA Tracy Van Buskirk.
·
ATF Special Agents assigned to the Yuma Satellite Office have conducted surveillance on the
suspect on numerous occasions, and on several occasions have observed him receive packages
from UPS, DHL and the U.S. Postal Service, after placing on-line orders with several distributers
of inert grenades and military surplus items. Federal grand jury subpoenas were served on his
internet provider and analysis of the records indicate that ATF has purchased approximately
two thousand grenade hulls, head assemblies, spoons and jungle clips. Extensive surveillance
also led the agents to a hardware store in the Yuma area where the suspect was found to have
purchased drill bits, a tapping tool, and other items which would be consistent with the
manufacture of IEDs from grenade bodies.
· ·
In addition, on November 12 th , 2009, Yuma Special Agents ATF interviewed
ATF who indicated that the suspect had a history of manufacturing
machine-guns and silencers, and had trafficked firearms in the past. This interview also revealed
that the suspect has a primary residence in an exclusive neighborhood in Mazatlan, in the state of
Sinaloa, Mexico. She further indicated that the suspect returns frequently to the United States to
pick up supplies and visit ATF This interview also revealed that the suspect has a
scheduled appearance in a San Diego courthouse in regards to a child custody issue. Agents
from the Yuma Office conducted surveillance on ATF as he attended the child custody
hearing and in another trip to San Diego for the birth of a child that he shares in common with

In early May of 2011, SAC Brandon, ASAC Atteberry and GS ATF met with Criminal Division Chief Cunningham and Supervisory AUSA Morrissey to request that this case be transferred. This case was reassigned to AUSA Josh Parecki of the National Security Section. AUSA Parecki moved diligently in examining all of the evidence which had been gathered in the case, and prepared to move towards securing an indictment (which is imminent). AUSA Parecki concurred with ATF's belief that a search warrant was needed for the thumb drive that ATF had in his possession at the time of his detention at the border and subsequent confession. Exploitation of that thumb drive provided information that indicates that ATF was either trafficking or manufacturing .50 caliber rifles, in addition to his activities pertaining to the securing of grenade components. In August of 2011, ATF Financial Auditors located financial assets which had not previously been located. These assets included two Mexican Bank Accounts. ATF is suspected of having transferred several hundred thousand dollars in funds from those accounts, to accounts in Germany or Switzerland. ATF did not file income taxes during this period, as required of a U.S. Citizen living abroad. In addition, ATF surveillance can corroborate that ATF was residing part time in the United States during the period of these wire transfers. **RECOVERIES:** 116 grenade hulls, head assemblies, spoons and pins were recovered from inside **ATF** tire at the San Luis POE on June 15th, 2010. There have been approximately 12 additional recoveries at various crime scenes in Mexico, samples from these recoveries have been sent to the ATF Laboratory for analysis. **ISSUES/PROBLEMS:** There were problems with the lack of initiative on the part of the previous Assistant U.S. Attorney, who took no action for a period of 10 months in this case despite overwhelming evidence, which included a confession from **ATF** reassigned to another Assistant U.S. Attorney in June of 2011, and significant progress has since been made. has taken his two small children to Mazatlan, where they currently reside with who has been cooperative in this investigation, resides in the State of California. If ATF is apprehended in Mexico, the children will require safe passage back into the United States. ATF is a United States Citizen. His marital status with reference to the female with whom he resides in Mazatlan is unknown. If he is in fact married to the female, deportation efforts initiated by the Mexican Government may become complicated.

or monies utilized by ATF had transferred through the SDNY for consideration in a 21 USC

referral in accordance with the MLAT. To date, no action has been taken by the Government of

In October, 2010 a case report was sent to the ATF Mexico City Office for translation and

846 prosecution. No such nexus could be determined.

Mexico in regards to potential prosecution.

ACTION or FOLLOW-UP:

- The Phoenix Field Division has been and is working closely with the ATF Mexico Country Office (MCO) on this case and they are prepared to assist in any follow-up needed.
- The Phoenix Field Division is also coordinating this investigation with the PGR representative assigned to the Phoenix Field Division office.
- The Phoenix I Field Office Supervisor has traveled to the U.S. Embassy in Mexico and conducted briefings with the DOJ Attaché and the Charge'd Affairs in regards to the unclassified aspects of this investigation.
- ATF personnel assigned to the Mexico City Office will coordinate with GOM assets in the event of ATF arrest, to ensure that his children, who are U.S. citizens, are safely transported back into the United States.
- Coordinate with IRS-CI in regards to bank accounts which have been located. These accounts indicate that ATF has wired several hundred thousand dollars in funds, between bank accounts in Mexico, Germany or Switzerland. ATF did not file taxes or declare income during this period.

EXPECTED OUTCOMES:

• It is expected that ATF will be indicted in mid-August, 2011 for violations of the Arms Export Control Act. Superseding indictments are expected for additional violations, including narcotics conspiracy and other related charges. Additionally, any pertinent information that may be developed as a result of ATF arrest of a public safety nature will be immediately passed on to our Mexican counterparts via the ATF Mexico City Office. Other intelligence or information gathered will be shared with other ATF and DOJ assets as appropriate.

BUDGET IMPACT:

- To date, approximately \$3000.00 in Agent Cashier has been expended in support of this
 investigation. No additional significant funding of this investigation is anticipated at this
 time.
- Politically-Great potential for use to highlight ATF's unique experience and expertise in the explosives arena in furtherance of our efforts to combat Southwest Border related violence.

DOJ POSITION/INTEREST:

- This case should be of intense interest in DOJ mainly due to the growing concern on the
 part of ATF personnel along the Southwest Border of the illegal manufacture of
 improvised grenades for use by DTOs.
- In addition the GOM has in the past blamed the U.S. as being the source of the grenades being seized in Mexico. Due to our efforts over the past several years we have been able to disprove these claims clearly showing that up to this point most of the grenades being

seized are part of Foreign Military Sales to countries such as Guatemala and El Salvador as well as grenades manufactured by and for the Mexican Army. However this case and the case in McAllen if made public or shared with the GOM could raise these claims once again, even if these are technically not "military grenades." They are however equally deadly when used as IEDs.

CONGRESSIONAL INTEREST:

• Yes, especially along U.S./Mexico border region and given the current climate, additional delays may cause criticism which could adversely affect the case.
