This Message Is From an External Sender
This message came from outside your organization.

Dear Steve,

I hope this email finds you well. It has now been around 1 year since your article on 'Challenges in the care of transgender and gender-diverse youth: an endocrinologist's view' was published in *Nature Reviews Endocrinology*, so I wanted to get in touch to give you an update on how the article is doing. I'm also re-sending the Powerpoint slide deck of your figures, which you can use in upcoming talks, and the PDF.

Online, all of our articles have an article metrics page, which contains information on citations and social media activity related to the article. As you can see from your article's metrics page (https://www.nature.com/articles/s41574-021-00535-9/metrics), your article has been shared online regularly and has been cited 5 times so far. We also have access to Google Analytics, which allows us to assess how many people have accessed your article online. Since publication in August 2021, your article has been accessed >2,400 times.

We have been promoting your article through our social media accounts, and will continue to do this over the coming months. It would also be great if you could continue to share the article with your colleagues. If you would like to cite your article the citation is — Rosenthal, S.M. Challenges in the care of transgender and gender-diverse youth: an endocrinologist's view.*Nat. Rev. Endocrinol.* **17**, 581–591 (2021). The article can be read (but not downloaded or printed) via ReadCube at this link (https://rdcu.be/cVFal).

As you can see, feedback on the article has been positive so far, and we hope that it will continue to be useful to your colleagues in the field. In addition, you are very welcome to visit our offices (the team is based in our London offices), and please do let me know if you have any feedback on the article or ideas for topics we could cover in the future.

I very much enjoyed working with you on this article, and hope to work with you again in the future.

With best wishes,
[redacted]

Dear [redacted]

Thank you so much for featuring my article on the cover of the October issue. I am deeply honored and touched, and especially grateful that the science in the care of transgender youth will have greater visibility and hopefully contribute in a positive way to the discourse on this complex subject.

Thank you again to you, and of course to [redacted] (I hope he is in better health, wherever he is) for the opportunity and honor to have written for*Nature Reviews Endocrinology*.

With all best wishes,

Sincerely,

Steve

Dear Stephen,

I hope you are well. I am writing to let you know that we have featured your article on the cover of our October issue to further increase its visibility. The October cover is currently displayed on our journal homepage: https://www.nature.com/nrendo/. I've also attached a copy of the cover for your personal use only.

It was a pleasure working with you and I hope that we can do so again in the future.

Best wishes,

Nature Portfolio is a flagship portfolio of journals, products and services, including *Nature* and the Nature journals. Nature Portfolio is part of Springer Nature, one of the world's leading global research, educational and professional publishers.

Springer Nature is a member of ORCID because we believe in the importance of global, open, research infrastructure, and we recognize the value that ORCID brings to the scientific and scholarly community. Through our membership as an organization, we help sustain ORCID's development and we participate in its governance to help ensure it delivers the services we need. However, it is equally important that you, as researchers and scholars who are the primary users and beneficiaries of ORCID, also have a voice in shaping the future of ORCID.

Therefore, we invite you to readthis important message from ORCID and we encourage you to apply to become (i) an ORCID Researcher Board member or (ii) a member of the newly created ORCID Researchers Advisory Council. This is a rare opportunity to participate in the strategy and governance of a major piece of

Subject: Manuscript accepted for publication in Nature Reviews Endocrinology

Dear Steve,

Manuscript number: NREND-18-124V1C
Title: Challenges in the care of transgender and gender diverse youth: an endocrinologist's view
Authors: Stephen Rosenthal

Thanks again for sending in your revised manuscript and answering my queries. I'm pleased to inform you that your manuscript has now been accepted for publication in Nature Reviews Endocrinology and sent to our production department.

Your manuscript will soon be copy-edited, which involves editing the text for grammar, clarity, consistency and house style before it is typeset. A link to the article E-proof will be sent to you with a request to return your proof corrections within 2 working days. You should receive the article proofs within the next 2 to 3 weeks. If you have not received your E-proof after this time, if you are unavailable during this period or if you have questions about publication timeframes following submission of your proof corrections, please contact the production team at NatRevProduction@nature.com.

We will promote your article on our social media channels once it is published; if you, your co-author(s) or your institutions have a Twitter handle, please could you send this to me? We will then ensure that the handles are tagged in relevant social media posts about your article, so that they are visible to yourself and your followers.

To thank you for writing for Nature Reviews Endocrinology, I would like to offer you and your contributing authors a 1-year personal online subscription to Nature; you will receive details regarding this in the next few weeks. Please let your contributing authors know to look out for the offer in their inboxes. We will also be sending everyone the article PDF when the article is published online and you, as

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.
the corresponding author, will receive a print copy of the journal in which your article appears, as soon as the article is published in a print issue.

Thanks again for writing for Nature Reviews Endocrinology. I have enjoyed working with you on this project.

Best wishes,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted]s live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted] pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted]

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Dear [redacted]

I am in the process of finalizing the offer letter revisions for Dr. [redacted] whom we are bringing on as faculty in Peds Endo. She is med-peds trained and would like to devote 1 half day session per week (to start) with the Adult gender affirming health program that is part of the Dept of Family and Community Medicine. Please see forwarded email from Dr. Deutsch who runs the adult program. I am seeking your advice about next steps and if we need to revise her formal offer letter with the details of how this portion of her clinical time would be covered.

Thanks in advance,

[redacted]

[redacted], MD, MHSc

Hello [redacted],

[redacted] has informed me that an offer is being assembled for her for a full-time faculty position based in Pediatric Endocrinology. I'd be happy to have [redacted] work in my clinic, ideally 2 sessions/week, but 1 session/week would work as well. The clinic is based in my department - FCM - and I believe the preferred structure will be for the funds flow to come to my department and then we would pay for [redacted] as a purchased service. Please let me know whom I should connect my department business contact with in your division, and if you require any supporting language from me for the formal offer.

Best,

Maddie

Successful oocyte cryopreservation using letrozole as an adjunct to stimulation in a transgender adolescent after GnRH agonist suppression

Caitlin E. Martin, M.D., M.S.,[a] Christopher Lewis, M.D.,[b] and Kenan Omurtag, M.D.[a]

[a] Division of Reproductive Endocrinology and Infertility, Department of Obstetrics and Gynecology, and [b] Division of Endocrinology and Diabetes, Department of Pediatrics, Washington University in Saint Louis, Saint Louis, Missouri

Objective: To report a successful case of ovarian hyperstimulation and oocyte cryopreservation in a transgender male adolescent after suppression with a gonadotropin-releasing hormone (GnRH) agonist while using the aromatase inhibitor letrozole to maintain low serum estradiol.
Design: Case report.
Setting: Division of Reproductive Endocrinology and Infertility, Washington University in St. Louis School of Medicine, St Louis, Missouri.
Patient(s): A 15-year-old Tanner II transgender male adolescent with a GnRH agonist implant.
Intervention(s): The GnRH agonist implant was removed. The patient was given letrozole (5 mg daily) while undergoing ovarian stimulation with an antagonist protocol. After oocyte retrieval, the patient began taking testosterone.
Main Outcome Measure(s): Successful oocyte cryopreservation with minimal changes in breast budding.
Result(s): The patient's peak serum estradiol concentration was 510 pg/mL. Twenty-two mature oocytes were cryopreserved. Small increases in breast budding occurred between baseline and the time of oocyte retrieval.
Conclusion(s): We successfully used letrozole to maintain low serum estradiol in a transgender male adolescent during ovarian stimulation. Maintaining low estradiol to minimize pubertal development and possibly prevent gender dysphoria symptoms may make oocyte cryopreservation more desirable for transgender male adolescents. Transgender youth who plan to take gender-affirming hormones before undergoing natal puberty often are first given a gonadotropin-releasing hormone (GnRH) agonist to delay pubertal progression. Some of these patients may desire fertility preservation with sperm or oocyte cryopreservation but may be concerned that puberty will progress during treatment as a result of stopping GnRH agonist treatment and a subsequent increase in endogenous estradiol. For transgender male youth, this concern is based on the fact that the peak serum estradiol concentration can reach 1000–4000 pg/mL during a typical oocyte retrieval cycle. Moreover, in certain patients at risk of hyperstimulation, estradiol concentrations can be even higher if care is not taken to avoid hyperstimulation. Thus, strategies are needed to stimulate the ovaries effectively while maintaining a low estradiol concentration.

One potential strategy is to provide transgender male youth with the nonsteroidal aromatase inhibitor letrozole, which prevents the peripheral conversion of androgens to estradiol. As letrozole can keep estrogen and progesterone concentrations low, it is a

standard part of ovarian hyperstimulation protocols in patients with breast cancer who have estrogen or progesterone-receptor positive disease. In breast cancer patients, letrozole has not been shown to reduce mature oocyte yield (1). Although a case series described the use of letrozole in adults (2), we found no publications in the PubMed database describing the use of letrozole in ovarian stimulation cycles in transgender male youth.

In this case report, we describe our experience using letrozole to maintain low serum estrogen during controlled ovarian hyperstimulation in an adolescent transgender male presenting for fertility preservation.

CASE REPORT

The patient is a 15-year-old transgender male who had been on pubertal blockers since age 10. At age 12, he received a histrelin implant, which contains a GnRH agonist (Vantas; Endo Pharmaceuticals Solutions, Inc., Wilmington, DE). At age 14, the patient was referred by his pediatric endocrinologist to reproductive endocrinology and infertility for fertility preservation. He and his mother presented to investigate the option of cryopreserving oocyte, but were concerned that the patient might progress through female puberty if his histrelin implant was removed and his estrogen concentration were to elevate during ovarian stimulation. A previous case report described stimulation with the GnRH agonist implant in place (3). Histrelin implants are approved for one year of use, but typically are effective for up to two years. Since the patient had his implant in for two years already and was planning on having his implant removed before starting testosterone therapy, the decision was made to undergo stimulation after the removal of the implant. Once the patient decided to proceed with ovarian stimulation, a multidisciplinary team including specialists in pediatric endocrinology, reproductive endocrinology, social work, and psychiatry met several times to discuss logistics and choose the best approach. Written consent was obtained from the patient and his mother to write this case report.

The patient's histrelin implant was removed in December 2019 (Table 1) and 2 months later his antimüllerian hormone concentration was 2.62 ng/mL, follicle-stimulating hormone was 3.6 mIU/mL, estradiol was 23 pg/mL, and luteinizing hormone (LH) was 1.3 mIU/mL (Table 2). At this time, his antral follicle count measured by transabdominal ultrasound was 25 and his breasts were Tanner Stage II with atrophic tissue.

Although ovarian stimulation was planned to begin in March 2020, stimulation was delayed because of COVID19-related closures. In April 2020 and May 2020, the patient received monthly injections of depot leuprolide (3.75 mg). In June 2020, he began a controlled ovarian stimulation protocol using a GnRH antagonist as described elsewhere (4). At this time, he began taking letrozole orally (5 mg daily). At stimulation baseline, his estradiol concentration was undetectable, transabdominal antral follicle count was 25, and breasts were Tanner Stage III with 3.5 × 3.5 cm of tissue on the right and 3.5 × 3.0 cm on the left. After 5 days of stimulation, the patient's estradiol concentration still was undetectable and no follicular growth was noted, so his gonadotropin dose was increased. He received a total of 2550 IU recombinant follicle-stimulating hormone (rFSH) and 2175 IU human menopausal gonadotropin (HMG) over 12 days. His peak estradiol concentration was 510.4 pg/mL. When the lead follicle was ≥20 mm (Table 2 and Fig. 1), an injection of 5000 IU human chorionic gonadotropin (hCG) was given to trigger follicular maturation and resumption of meiosis. Human chorionic gonadotropin was chosen instead of leuprolide acetate because the patient had been on depot leuprolide acetate before stimulation, raising the concern that he might not make enough endogenous LH to trigger final oocyte maturation. A low dose of hCG was used to reduce the risk of severe ovarian hyperstimulation syndrome. Oocytes were retrieved 36 hours later. Of the 36 oocytes obtained, 22 were mature and were cryopreserved. During the procedure, the patient had a small hymenal ring abrasion that did not require suturing.

When evaluated on the day of retrieval, breast development remained at Tanner Stage III, though breast tissue had increased to 4.5 × 5 cm on the right and 4.5 × 4.5 cm on the left. The patient started testosterone therapy 3 days after oocyte retrieval. He was to take letrozole orally (2.5 mg daily) for growth optimization by delaying epiphyseal plate closure. However, because of a miscommunication, he stopped the

letrozole. One week after stimulation, his estradiol concentration was 97.8 pg/mL.

The morning after the patient received the hCG trigger, he experienced shortness of breath and sudden cramping abdominal pain without nausea. The symptoms resolved <30 minutes after onset. His mother reported that, in the past, he occasionally experienced anxiety that presented as shortness of breath. The abdominal pain was localized to the right lower quadrant and was likely because of enlarged ovaries. Because this pain resolved spontaneously and almost immediately, our concern for ovarian torsion was diminished.

Approximately 4 days after retrieval, the patient experienced a menstrual period lasting 6 to 7 days with 3 days of moderate flow. He felt cramping and fatigue for approximately 1 week. His mother noted that he would not have been able to attend school if it had been in session. The patient experienced an additional episode of vaginal bleeding 1 month after this initial period. At that time, the estradiol concentration was undetectable, FSH was 10 mIU/mL, LH was 5.5 mIU/mL, testosterone was 228 ng/dL, and free testosterone was 22.7 ng/dL. These values were consistent with male puberty. In addition, the estradiol was likely low because of the letrozole use, which he restarted a few days before the blood tests. The patient was counseled on menstrual suppression regimens and opted for 150 mg intramuscular Depo-Provera. Menstrual bleeding has stopped. After being on testosterone for 3 months, his breast tissue was atrophic.

During the stimulation, the patient had support from his family, a case manager, his pediatric endocrinologist, and the reproductive endocrinology and infertility team. Since starting testosterone, the patient has been feeling very positive. Overall, he and his family were satisfied with their decision to cryopreserve oocytes.

DISCUSSION

In the United States in 2017, 0.7% of those aged 13–17 years (approximately 150,000 individuals) identified as transgender (5). The Endocrine Society and the World Professional Association for Transgender Health have provided clear guidelines and recommendations surrounding the use of GnRH agonist therapy and gender-affirming hormonal therapy for transgender individuals (6, 7). Additionally, both of these societies recommend counseling on fertility preservation before initiating testosterone or estrogen therapy. However, those working in the field of reproductive endocrinology and infertility need to learn more about how to apply our treatments safely and effectively and to set expectations adequately about the process to transgender youth and adults.

To our knowledge, this is the first case report describing the use of an aromatase inhibitor to maintain low estrogen concentrations during ovarian stimulation of a transgender male adolescent who had been on GnRH agonist therapy to prevent pubertal progression. Moravek (8) describes rising levels of estradiol during stimulation as concerning for transgender men and suggests using letrozole to reduce this concern. In a qualitative study, transgender youth expressed feelings of dysphoria when considering oocyte cryopreservation (9). Armuand et al. (2) described using letrozole during ovarian stimulation in transgender men ages 19–35 years. Despite using letrozole, Armuand et al. (2) report that these men experienced gender dysphoria, but were able to cope with these feelings effectively. The investigators point out that the procedure itself was not distressing to patients, but the experiences leading up to retrieval that linked transgender men to their incongruent sex assigned at birth, such as breast tenderness and transvaginal ultrasounds, were distressing (2). Our patient found the minimal degree of breast progression and menstruation distressing; however, he did not report gender dysphoria or suicidal ideation during the stimulation. In a systematic review, Baram et al. (10) also suggest using letrozole to maintain low levels of estrogen. Letrozole has been used effectively in patients with estrogen- and progesterone-receptor positive breast cancers undergoing ovarian stimulation. Letrozole appears not to reduce mature oocyte yield (1) and generally is a well-tolerated oral medication. To further minimize estrogen rise, a GnRH agonist can be used instead of hCG to trigger oocyte maturation (11).

A prior case report described ovarian stimulation in a transgender male adolescent who retained his histrelin implant (3). Although that team considered removing the histrelin implant, the family was concerned about the psychologic effects of removal and opted to keep the implant in place (3). During the stimulation, a "low slow" approach was used in providing rFSH and HMG. Although the stimulation was successful, only four mature oocytes were obtained. After speaking with that team about their experience, we decided to start with a higher dose of rFSH and HMG. We obtained 22 mature oocytes. This robust response may have been because we removed the histrelin implant and started at a higher dose of rFSH and HMG. Histrelin implants can be left in place while testosterone therapy is started. Our patient had his implant removed in December 2019, two years after placement. The histrelin implant is approved for one year; however, it may be effective for up to two years if left in place. The implant often is not covered by insurance and can cost approximately $5400 if paid for out of pocket (12).

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00036

Obtained via CPRA by Judicial Watch, Inc.

The hypothalamic-pituitary-gonadal axis typically resumes function 3 and 6 months after implant removal. If within two years of implant placement, some patients choose to keep the implant in place while starting testosterone. In the initially planned timeline, stimulation was to begin in March 2020; however, this was delayed because of the COVID19 pandemic. The patient took GnRH agonist injections while waiting for our clinic to resume nonemergent procedures.

There are other fertility preservation options for transgender males apart from oocyte cryopreservation. Data show that transgender male adults desire biological children (13). One study reported 35.9% of surveyed transgender adolescents desired biological children and 26.3% were unsure if they wanted biological children (14). Although oocyte cryopreservation before testosterone therapy as an adolescent is one option, some patients may choose to delay oocyte cryopreservation until adulthood. Stimulation is typically performed after stopping testosterone for 3–6 months (15, 16), however, a recent case report described successful stimulation immediately after testosterone cessation (17). For those not interested in undergoing oocyte cryopreservation, ovarian tissue cryopreservation is another option that could be performed during gender-affirming surgery, however, there is not much data regarding outcomes after testosterone use (8).

We encountered a few minor challenges during this case. First, we used an abdominal probe instead of a transvaginal probe for sonographic monitoring to assess follicular development. Second, we had a low level of concern for not being able to access the patient's ovaries on the day of retrieval given his low body mass index. However, we had discussed this possibility with the family ahead of time. We also discussed with the patient and his family ahead of the retrieval that the probe could cause a vaginal laceration at the time of oocyte retrieval. Although the patient did have a small hymenal ring abrasion, which was likely caused during the vaginal preparation with normal saline and a speculum, we did not need to suture it.

CONCLUSION

Specialists should consider using letrozole as an adjunct to the controlled ovarian hyperstimulation protocol when stimulating ovaries for fertility preservation in transgender male adolescents. We were successful in stimulating this patient who was transitioning from using a GnRH agonist implant to testosterone therapy. This case report catalogs the unique needs of each of the four phases of the oocyte cryopreservation process (prestimulation, stimulation, procedural, and postprocedural) that are necessary for preparing these patients. Although we demonstrate the utility of using letrozole in a transgender adolescent, letrozole could also be used in transgender male adults. We note the importance of including a multidisciplinary team to ensure the patient's well-being during a stressful time. Finally, we note that a strategy to keep estradiol low may make the oocyte cryopreservation process more appealing to transgender male youth, allowing them the opportunity to preserve their fertility.

Criopreservación satisfactoria de ovocitos utilizando Letrozol como adyuvante para la estimulación ovárica en un adolescente transgénero tras supresión con agonista de GnRH.

Objetivo: Comunicar un caso exitoso de hiperestimulación ovárica y criopreservación de ovocitos en un varón adolescente transgénero tras supresión con agonista de homona liberadora de gonadotrpinas (GnRH-a) con utilización concomitante del inhibidor de aromatasa Letrozol para mantener el estradiol sérico bajo.

Diseño: Comunicación de un caso.

Entorno: División de Endocrinología Reproductiva e Infertilidad, Universidad de Washington en la escuela de medicina de St Louis, St Louis, Missouri.

Paciente(s): Varón adolescente transgénero de 15 años, Tanner II con un implante de GnRH-a.

Intervención(es): Se retiró el implante de GnRH-a. El paciente recibió Letrozol (5 mg diarios) mientras se realizaba estimulación ovárica con un protocolo de antagonistas. Después de la recuperación de ovocitos, el varón empezó a tomar Testosterona.

Medida(s) del resultado(s) principal(es): ovocitos criopreservados con éxito con cambios mínimos em el desarrollo mamario.

Resultado(s): El pico de estradiol sérico del paciente fue de 510 pg/mL. Se criopreservaron 22 ovocitos maduros. Se observó un pequeño incremento en el desarrollo mamario entre el inicio del tratamiento y la recuperación de ovocitos.

Conclusión(es): Se utilizó Letrozol con éxito para mantener bajo el nivel de estradiol sérico en un varón adolescente transgénero durante la estimulación ovárica. Mantener el estradiol sérico bajo para minimizar el desarrollo puberal y probablemente prevenir síntomas de disforia de género podría hacer más deseable la criopreservación de ovocitos para los varones adolescentes transgénero.

Palabras clave: Transgénero, varón adolescente transgénero, criopreservación de ovocitos, criopreservación de fertilidad, letrozol, inhibidor de aromatasa.

Hello. Please see attached.

Maddie

Maddie Deutsch, MD MPH is a Professor of Clinical Family & Community Medicine and the founding Medical Director of the UCSF Gender Affirming Health Program.

Dr. Deutsch serves as the faculty lead for the implementation of sexual orientation and gender identity (SOGI) data collection workflows at UCSF Health, and is a member of the Data Equity Work Group. Dr. Deutsch is also a Clinician Co-Lead for Diversity Equity, Inclusion, and Belonging at UCSF Health, and is a Faculty Leader for the UCSF School of Medicine Differences Matter Initiative. Dr. Deutsch serves as the editor of the UCSF Guidelines for the Care of Transgender and Gender Nonbinary People, which are accessed by several thousand individual visitors each month. Dr. Deutsch also attends on a part-time basis in the emergency department at UCSF-Parnassus.

Dr. Deutsch has been the PI or Co-I for a range of studies in the area of transgender and sexual minority health. Dr. Deutsch is a member of the Editorial Boards for the journals LGBT Health, Transgender Health, and International Transgender Health. Dr. Deutsch was the Chapter Lead for Primary Care for the 8th Revision of the World Professional Association for Transgender Health (WPATH) Standards of Care, serves on the WPATH Board of Directors, and is the current President of that organization's US chapter (USPATH). She has served as the scientific chair or co-chair for numerous professional conferences and continuing education activities, and has authored or co-authored more than 40 peer-reviewed publications and several textbook chapters.

Subject: Differences Matter: Tuesday Mtg Pre-Work and Details

Hello Differences Matter Team,

We are looking forward to our first meeting on Tuesday and can't wait to get the group together for the first time! Sending a few requests and details:

1. **Virtual:** Please note Tuesday's meeting will be virtual. All meetings moving forward will likely be in-person.
2. **Project Charter:** To prepare for Tuesday, please read our Project Charter which is in thisBox folder. We hope you will use this folder to catalog the work you do as it progresses. Each work group has its own folder. This is also where we will keep slide decks from our meetings and share any common resources that might be helpful.
3. **Bios and Headshots:**In advance of our meeting, please send me a short bio and headshot.

Please let me know if you have any questions.
Thank you,
[redacted]

Subject: Re: Epic immersion at UCSF / SFDPH

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

[redacted] – I did discuss this with [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

[redacted]

Subject: [redacted] immersion at UCSF / SFDPH

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Hi Maddie,

I'm the senior health and medicine editor at The Conversation. I just listened to the SciLine media briefing on youth gender identity and transitioning, and it was fantastic. Thank you – your presentation was so informative and helpful.

Your mention of how journalistic pieces can sometimes cherry pick or leave out key scientific details really resonated with me, and I wanted to reach out to tell you about the model at The Conversation and see if I can interest you in writing a research-based explainer for us.

If you're not familiar with The Conversation, it is a news/analysis website with content written by academics, edited by journalists and aimed at the general public. Our goal is to bring academic expertise to a broader audience, and our global content typically gets up to 40 million reads per month. Our funding comes from foundations and university members, and UCSF is a partner on our site.

All of the pieces on our site are authored by scholars, but the editors on staff (who are trained journalists like myself) collaborate closely with scholars in the editing process to make the pieces widely accessible. Here, for instance, is a piece that I worked on a little while back with Carl Streed and Frances Grimstad on sex designation: https://theconversation.com/not-everyone-is-male-or-female-the-growing-controversy-over-sex-designation-172293

Would you be interested in writing an explainer piece for us in the ballpark of 1,100 words (our typical length) sometime in the coming month or two? The timing is very flexible.

Here are some of the notes I wrote down during your talk that I think would be excellent to address:

- How do experts determine when someone is in puberty? (briefly explain the stages, range of measures)
- Explain puberty blockers, hormone treatments and how they "put the breaks on" development and the degree to which they have lasting effects.
- Discuss the biological mechanisms (e.g. gonads stop making estrogen or testosterone hormone and how this can send the body back to an earlier stage of development).
- Discuss the excellent safety record, impacts on bone density and overall development such as height.
- Mention how these are multidisciplinary decision-making processes by people with appropriate expertise.
- Discuss dosing, how it's ramped up later in puberty.
- Brief mention of fertility considerations and freezing of eggs and sperm

I know it's an incredibly hectic time of year and understand if you don't have the bandwidth for it. But I'd love to have the opportunity to work with you and I know a piece like this would be incredibly beneficial to readers, so I hope you'll consider it. If so, I'm happy to jump on a call with you in the coming weeks to fill you in a bit more on the process.

Many thanks for your time!

Amanda

- Explain puberty blockers, hormone treatments and how they "put the breaks on" development and the degree to which they have lasting effects.
- Discuss the biological mechanisms (e.g. gonads stop making estrogen or testosterone hormone and how this can send the body back to an earlier stage of development).
- Discuss the excellent safety record, impacts on bone density and overall development such as height.
- Mention how these are multidisciplinary decision-making processes by people with appropriate expertise.
- Discuss dosing, how it's ramped up later in puberty.
- Brief mention of fertility considerations and freezing of eggs and sperm

I know it's an incredibly hectic time of year and understand if you don't have the bandwidth for it. But I'd love to have the opportunity to work with you and I know a piece like this would be incredibly beneficial to readers, so I hope you'll consider it. If so, I'm happy to jump on a call with you in the coming weeks to fill you in a bit more on the process.

Many thanks for your time!

Amanda

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted] pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted]

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted] pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted]

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi Dr. Rosenthal,

I was hoping to connect with you at WPATH but couldn't find the opportunity. If you're available, I would love to meet with you virtually and get your guidance on pursuing a PhD and general career advice in the transgender field! Thank you for your time.

Best Regards,

[redacted]

Dear [redacted],

Thanks very much for your email and resume. We don't currently have any PhD opportunities on the horizon for 2023 at the UCSF Child and Adolescent Gender Center, but perhaps we can arrange a zoom call so I can get a better understanding of what you would hope to pursue. I will be away June 9-14 at the Endocrine Society meeting in Atlanta. If you could contact me after June 14, we can then arrange to get a zoom call on our calendars.

Thanks and best wishes,

Steve Rosenthal

Subject: PhD Position Inquiry Transgender Health

This Message Is From an External Sender
This message came from outside your organization.

Hello Dr. Rosenthal,
My name is [redacted] I am very interested in transgender research which is strongly reflected in my research endeavours. My first research project in Summer 2020 titled [redacted] has been submitted and was presented at the American College of Cardiology 2021 Annual Conference and chosen for additional media promotion. During fourth year in my Bachelor of Science in Honours Pharmacology degree at the University of Alberta, I worked on [redacted] which was presented internationally at the World Congress of Nephrology 2021 Meeting and nationally at the Canadian Society of Nephrology 2021 Meeting. Both of these projects were presented at UBC's 6th Annual Women's Health Symposium virtually. In Summer 2021, I conducted another study '[redacted] was presented at the American Physiological Society New Trends in Sex and Gender Medicine 2021 Conference. Additionally, I was chosen to Co-Chair their Transgender Medicine session which highlighted new up-and-coming research and priorities in the transgender population. The results of this project were then presented at the Organization for the Study of Sex Differences 2022 Conference in Marina Del Rey, California alongside my MSc thesis '[redacted] Outside of my research projects, I strive to be a transgender activist and have published blogs for UBC ([redacted]) and UofC ([redacted]). My advocacy and research excellence have been highlighted by funding history of over $38k, one of which is the highly competitive Alberta SPORU Graduate studentship ($30k) which has funded my MSc work. In addition to this, I have been awarded 1st place Oral Presentation by the Cumming School of Medicine, a Diversity Scholarship by the American Physiological Society, a Undergraduate Excellence Award by the Organization for the Study of Sex Differences and various travel awards by the University of Calgary. Outside of research, I have led two internationally attended conferences with over 100 registrants with Hypertension Canada (Hypertension Across the Lifespan, January 2021) and the CIHR IGH Sex and Gender Trainee Network (Transgender Health: Personal, Clinical and Research Perspectives). I have extensive leadership experience as I sit as a chair member for Hypertension Canada's Membership Committee, Libin Trainee Initiatives, Libin Cardiovascular Institute Education Committee and the University of Calgary Lead for CIHR IGH Sex and Gender Trainee Network.
These experiences highlight my passion and advocacy for transgender research which is why I am interested in your work. I am very interested in your field of research and would like to expand the field of transgender research with your mentorship. If possible, could I make an appointment with you to learn more about your research and any potential Ph.D. opportunities for the Fall 2023 year you might be providing?
Thank you for your time. I look forward to hearing from you. Attached is my resume and CCV.
Best Regards,

[redacted]

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

+ [redacted] to the thread.

Best,
Won

Subject: Re: Form submission from: Contact Us

Maddie, thanks for sending the statement over and appreciate the updates. As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Subject: CAGC Celebration

Dear CAGC Team,

I would like to arrange a CAGC celebration given our anniversary and ongoing amazing work! [redacted] has offered an *outdoor* backyard space in SF. I propose either **Friday, October 28 at 5 pm or Saturday, October 29 at 10 am** (brunch). It could be potluck. [redacted] is there a way to get division money for catering instead?

Please let me know if you are available on these dates and we can pick the one that works for most.

Maddie, thanks for sending the statement over and appreciate the updatesAs expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Subject: Re: Form submission from: Contact Us

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted].

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping

Obtained via CPRA by Judicial Watch, Inc.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

+ [redacted] to the thread.

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC).
2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

Phone Number: 202-431-7425
Subject: Genital surgeries on minors
I am a : Someone Else
Message: I'm a producer for Fox News. Ahead of imminent coverage, please let me know how many genital surgeries you have performed on minors in the past year. Your published guidelines say these operations on minors are appropriate on a "case by case basis." How many? Also, are you worried about being sued into the ground like Tavistock? Deadline in 3 hours. Thanks.

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC).
2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Subject: Re: Form submission from: Contact Us

Maddie, thanks for sending the statement over and appreciate the updatesAs expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Subject: Re: Form submission from: Contact Us

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

Subject: Epic immersion at UCSF / SFDPH

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

This message came from outside your organization.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,
[redacted]

[redacted] & the SF DPH crew - please respond by **9/27** with blocks of dates during which Epic can come shadow either at The General or other locations in the network to understand how we collect SO/GI and pain-points in that process. I know this is an active effort on our parts right now to optimize collection, so this is a great opportunity.

Epic folks - I'm assuming we are targeting before the end of the calendar year, but please let us know if there are more specific windows of time you'd be available, and we can hone availability based on that.

Thanks,
[redacted]

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

[redacted] – I did discuss this with [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted]and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted]and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Maddie, thanks for sending the statement over and appreciate the updates. As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Subject: Re: Form submission from: Contact Us

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

Subject: Re: Form submission from: Contact Us

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

Subject: Re: Form submission from: Contact Us

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Maddie, thanks for sending the statement over and appreciate the updatesAs expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,

Subject: Re: Form submission from: Contact Us

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Subject: Re: Form submission from: Contact Us

Maddie, thanks for sending the statement over and appreciate the updates. As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

This Message Is From an External Sender
This message came from outside your organization.

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

External Mail

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,

Subject: Re: Epic immersion at UCSF / SFDPH

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

This Message Is From an External Sender
This message came from outside your organization.

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

[redacted] – I did discuss this with [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

[redacted]

This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF &

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for [redacted] to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Maddie, thanks for sending the statement over and appreciate the updates As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted].

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

Maddie, thanks for sending the statement over and appreciate the updates As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

I know there is more conversation to come but wanted to share this timely update this evening.

Best,
[redacted]

Subject: Re: Form submission from: Contact Us

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted].

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

two. We felt it urgent to get the statement out right away.

Subject: Re: Form submission from: Contact Us

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites.

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted].

Please let me know your thoughts.

Thanks,
Steve

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Subject: Re: Form submission from: Contact Us

Maddie and All,

First, Maddie, I'm so glad you removed the pediatric content from the UCSF guidelines, as much has happened science/evidence-wise to support our interdisciplinary model of care since those guidelines were written in 2016.

To All: We also have to make a major decision as to whether or not to temporarily remove specific names of CAGC team members. They appear (to varying degrees) in at least 3 UCSF websites:

1. There's a reference to me (and link to my bio on the adult Transgender site (though I didn't see a direct link to the CAGC). 2. The CAGC website, itself, and 3. UCSF EDI website managed by [redacted]

Please let me know your thoughts.

Thanks,
Steve

Subject: Re: Form submission from: Contact Us

An unfortunate segment. I am assuming they focused on Vanderbilt because it is located where their base is located. I've taken down our peds content in the guidelines for now and instead direct people to the SOC8. The content they referenced is 6 years old anyway and slated for updating next year. I've also made a few light edits to the rest of our website to minimize any ability for the content to be weaponized.

Maddie, thanks for sending the statement over and appreciate the updates. As expected, we were part of tonight's segment on the issue of gender affirming care for minors – characterized by the show as "mutilation of children for profit." While the primary focus and the bulk of the rhetoric was focused on Vanderbilt University, there was a brief segment on UCSF where screenshots of some of UCSF's web content related to gender affirming surgeries was shared. UCLA was also briefly referenced, along with a few other hospitals.

Hello Ha, thanks for this reply. Yes I agree that we not respond. I've also spread the word throughout our team and partner clinics, and have provided neutral scripting for front line staff. I've requested that they forward any inquiries that come in to me, and I will then turn them over to [redacted]

I have a meeting next week with [redacted] to discuss some of the scope of practice/credentialing/clinical policy issues we've discussed. We have an action plan for communications. I think the main area of concern that remains is security and safety. I know we are trying to set up a follow up meeting. Has there been any progress with UCPD or otherwise on this front? A gynecologist at Boston Children's Hospital had her home address found and posted online by right wing groups, and she now has a security detail. A pediatrician at Children's LA had her cell phone number found via a FOIA request for her NIH grant paperwork, it was also posted online.

Also I am including a link to a statement released 2 days ago jointly by USPATH and WPATH. The staffs are still wrapping up from the WPATH conference this weekend, and will post a more formalized version on the website in the coming week or two. We felt it urgent to get the statement out right away.

Thank you, Maddie.

[redacted] alerted me to this. I recommend we not respond. The Tucker Carlson show does not follow ethical journalistic standards nor is it a news program, but an opinion program. Whether we respond or not, this will be a negative story based on falsehoods and misleading claims. They will use any response from us in any way that suits their preconceived, false narrative, and will likely generate more attention to their partisan cause.

Happy to discuss. Please reach out to me directly if it'd be helpful to connect.

+ [redacted] to the thread.

Best,
Won

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Hi [redacted],

No worries! I didn't feel pestered! I just wanted to be sure you knew that I was away and not ignoring you! My "Other Support" (OS) hasn't changed since 10/21. Just in case you need it, I have attached my OS on the new form (completed in April of this year).

I hope you have a good visit with your mother! This is so important!

Best wishes,

Steve

Thanks, Steve. I did not mean to pester. I'll be away for the next few weeks as I'm visiting my mom for the first time in 2 years and teeing things up before I leave this weekend. I won't need it until return 9/15/22 if that is helpful with triaging/prioritizing given your deadlines and catching up.

Sincerely,
[redacted]

Hi Steve,
I hope you are doing well. Has your funding changed since October 2021? I've attached your Other Support document I last submitted. My annual K23 report is due and I need to provide an updated other support document if anyone's funding has changed. If it has not, nothing to do. If it has, could I get an updated version in the new NIH format? I'm happy to reach out to your financial person if that'd be helpful.

Thanks for your support! Also, thanks for your edits on the TYCUS manuscript. It's definitely been interesting working with so many co-authors.

Hi all,
What if we targeted late January / early February?
That way [redacted] would (hopefully) be able to attend, and that would give us all time to ensure folks are available.
[redacted] - do you have any restrictions during that time? I was hoping to secure a time when you would be available to talk through some of the build issues we've encountered.
Thanks,
[redacted]

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,
[redacted]

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial

Obtained via CPRA by Judicial Watch, Inc.

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

@[redacted] – I did discuss this with [redacted] and [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Dear Professor Rosenthal,

May I first introduce myself as a member of the editorial team at Polity in Cambridge, UK – I hope you are well.

I'm writing to ask whether you might be willing to review a 4-page proposal I have received from [redacted], for a book entitled*Puberty Blockers and the Transgender Revolution*. If you would be so kind as to agree, I would send you the proposal and a set of questions, and would ideally receive your views by 9th October. We could offer an honorarium of $120 (or 6 Polity paperbacks) for the review and I'd be very grateful for your thoughts.

(I will be away from tomorrow until 26th September, but will be checking my Gmail address, CCed, and will be able to send the materials from there.)

Kind regards,

[redacted]

Apologies for the delay! I was able to take some much needed time off and am now catching up on correspondence. Regarding the conference, this occurs from 10:30-11:30 central time on Thursday mornings, so would be 8:30-9:30AM pacific time. Generally it is a 45-50 minute talk with about 10-15 minutes for questions. Regarding content, a talk on research priorities and outcome measurement in transgender healthcare and/or a presentation on your process and lessons learned in building a transgender center of excellence would be of interest to our audience.

Given the virtual format, we could arrange additional meetings at your convenience that day individually or in groups. I know that [redacted] and I would like to meet with you, as well as [redacted] (2 of our other GAHT focused endocrinologists). We have a number of folks in our pediatric center and in internal medicine, gynecology, and plastics who would also be interested in meeting with you. I anticipate we would sort out number and timing of meetings as the date draws closer. Please let me know what other questions you have. I am very excited that you are able to do this!

This Message Is From an External Sender
This message came from outside your organization.

Dr. Deutsch,
I am the co-director for our adult transgender center at Washington University in St. Louis. I would like to invite you to speak at our endocrine division's research conference series about your work in transgender healthcare and building the UCSF Gender Affirming Health Program. The conference reaches audiences in pediatric and adult endocrinology as well as others doing work in obesity and metabolism. We would also advertise your talk to our center collaborators medicine, gynecology, and surgery, so I anticipate you would have a multi-disciplinary audience. The plan is for an in-person conference at this point. The division provides an honorarium and covers travel. There are many of us who would look forward to meeting with you while you are here to discuss research opportunities and ways to optimize the services our center provides. We have grown substantially in the last 2 years.

These conferences occur weekly on Thursday mornings September-April. If you are available on March 2, 2023 that is one of the dates we currently have available. However, I would be happy to work with you to find another that works best with your schedule in the spring if needed.
Thank you very much for considering!

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

This Message Is From an External Sender
This message came from outside your organization.

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

External Mail

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,
[redacted]

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am adding in [redacted] and [redacted] from SF DPH Primary Care.

[redacted] & the SF DPH crew - please respond by **9/27** with blocks of dates during which Epic can come shadow either at The General or other locations in the network to understand how we collect SO/GI and pain-points in that process. I know this is an active effort on our parts right now to optimize collection, so this is a great opportunity.

Epic folks - I'm assuming we are targeting before the end of the calendar year, but please let us know if there are more specific windows of time you'd be available, and we can hone availability based on that.

Thanks,

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

Subject: Epic immersion at UCSF / SFDPH

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Subject: Re: Staff Meeting 9/27

Hi Steve,

Thanks very much for the update - yes, lots to update!
I forwarded the meeting invite to [redacted] and will ask him to join right at the beginning if possible.

Here are some agenda items -

1. [redacted] study - [redacted] 5-10 min

2. CAGC Personnel updates - [redacted] leaving Oakland CAGC, [redacted] & [redacted] joined from pediatric psychiatry. Practice Coordinator in SF has accepted (I think [redacted] told me she starts in Oct 2022). Other updates re: NP hires? Psychology? SW? Ped Endo Faculty?
3. Workflow w/LOS review now that [redacted] and [redacted] have joined?
4. CAGC capacity issues and adult transition program - Adult GAHP now w/new provider Steve Nguyen, MD (they/them)
5. Security concerns - [redacted] (Vice Chair of Operations at BCH) and [redacted] [redacted] (Communications) along with UCPD and UCSF PD lieutenants joined the Peds Endo Division meeting on Friday, 09/23 to provide updates and their personal contact information if any concerns arise. Scripting to be shared for front line staff (front desk, LVN, SW, etc). Crisis planning in process. Website updates?
6. Updates on move to Pritzker Building?
7. SOC8 out - not sure we'll have any time to discuss this

Best,
[redacted]

Apologies for the delay! I was able to take some much needed time off and am now catching up on correspondence. Regarding the conference, this occurs from 10:30-11:30 central time on Thursday mornings, so would be 8:30-9:30AM pacific time. Generally it is a 45-50 minute talk with about 10-15 minutes for questions. Regarding content, a talk on research priorities and outcome measurement in transgender healthcare and/or a presentation on your process and lessons learned in building a transgender center of excellence would be of interest to our audience.

Given the virtual format, we could arrange additional meetings at your convenience that day individually or in groups. I know that [redacted]) and I would like to meet with you, as well as [redacted] focused endocrinologists). We have a number of folks in our pediatric center and in internal medicine, gynecology, and plastics who would also be interested in meeting with you. I anticipate we would sort out number and timing of meetings as the date draws closer. Please let me know what other questions you have. I am very excited that you are able to do this!

This Message Is From an External Sender
This message came from outside your organization.

Dr. Deutsch,
I am the co-director for our adult transgender center at Washington University in St. Louis. I would like to invite you to speak at our endocrine division's research conference series about your work in transgender healthcare and building the UCSF Gender Affirming Health Program. The conference reaches audiences in pediatric and adult endocrinology as well as others doing work in obesity and metabolism. We would also advertise your talk to our center collaborators medicine, gynecology, and surgery, so I anticipate you would have a multi-disciplinary audience. The plan is for an in-person conference at this point. The division provides an honorarium and covers travel. There are many of us who would look forward to meeting with you while you are here to discuss research opportunities and ways to optimize the services our center provides. We have grown substantially in the last 2 years.

These conferences occur weekly on Thursday mornings September-April. If you are available on March 2, 2023 that is one of the dates we currently have available. However, I would be happy to work with you to find another that works best with your schedule in the spring if needed.
Thank you very much for considering!

Hello, I now must apologize for my significantly delayed reply. Yes, I would be happy to do this. Let me know if you are still interested and we can sort out a date.

Best,

Maddie

Apologies for the delay! I was able to take some much needed time off and am now catching up on correspondence. Regarding the conference, this occurs from 10:30-11:30 central time on Thursday mornings, so would be 8:30-9:30AM pacific time. Generally it is a 45-50 minute talk with about 10-15 minutes for questions. Regarding content, a talk on research priorities and outcome measurement in transgender healthcare and/or a presentation on your process and lessons learned in building a transgender center of excellence would be of interest to our audience.

Given the virtual format, we could arrange additional meetings at your convenience that day individually or in groups. I know that [redacted] and I would like to meet with you, as well as [redacted] and [redacted] (2 of our other GAHT focused endocrinologists). We have a number of folks in our pediatric center and in internal medicine, gynecology, and plastics who would also be interested in meeting with you. I anticipate we would sort out number and timing of meetings as the date draws closer. Please let me know what other questions you have. I am very excited that you are able to do this!

Hello. March 2 could work. Please let me know what topics you wish to have covered, how long I'd speak, other meetings, etc... and then we can sort out timing and honorarium etc...

Cheers,

Maddie

Dr. Deutsch,
I am the co-director for our adult transgender center at Washington University in St. Louis. I would like to invite you to speak at our endocrine division's research conference series about your work in transgender healthcare and building the UCSF Gender Affirming Health Program. The conference reaches audiences in pediatric and adult endocrinology as well as others doing work in obesity and metabolism. We would also advertise your talk to our center collaborators medicine, gynecology, and surgery, so I anticipate you would have a multi-disciplinary audience. The plan is for an in-person conference at this point. The division provides an honorarium and covers travel. There are many of us who would look forward to meeting with you while you are here to discuss research opportunities and ways to optimize the services our center provides. We

have grown substantially in the last 2 years.

These conferences occur weekly on Thursday mornings September-April. If you are available on March 2, 2023 that is one of the dates we currently have available. However, I would be happy to work with you to find another that works best with your schedule in the spring if needed.
Thank you very much for considering!

Hi Steve, A report on top surgery in transgender and nonbinary adolescents and a related editorial caught my eye. I thought this was not standard of care until the age of legal majority because of issues of regret and potential physician legal liability, and that puberty blocking therapy to prevent this sort of thing was the standard of care. Am I mistaken? [redacted]

JAMA Pediatrics | Original Investigation

Top Surgery and Chest Dysphoria Among Transmasculine and Nonbinary Adolescents and Young Adults

Mona Ascha, MD; Daniel C. Sasson, BA; Rachita Sood, MD; Jeremy W. Cornelius, MA; Jacob M. Schauer, PhD; Adariane Runge, MS; Abigail L. Muldoon, MA; Noopur Gangopadhyay, MD; Lisa Simons, MD; Diane Chen, PhD; Julia F. Corcoran, MD, MHPE; Sumanas W. Jordan, MD, PhD

IMPORTANCE Transgender and nonbinary (TGNB) adolescents and young adults (AYA) designated female at birth (DFAB) experience chest dysphoria, which is associated with depression and anxiety. Top surgery may be performed to treat chest dysphoria.

OBJECTIVE To determine whether top surgery improves chest dysphoria, gender congruence, and body image in TGNB DFAB AYA.

DESIGN, SETTING, AND PARTICIPANTS This is a nonrandomized prospective cohort study of patients who underwent top surgery between December 2019 and April 2021 and a matched control group who did not receive surgery. Patients completed outcomes measures preoperatively and 3 months postoperatively. This study took place across 3 institutions in a single, large metropolitan city. Patients aged 13 to 24 years who presented for gender-affirming top surgery were recruited into the treatment arm. Patients in the treatment arm were matched with individuals in the control arm based on age and duration of testosterone therapy.

EXPOSURES Patients in the surgical cohort underwent gender-affirming mastectomy; surgical technique was at the discretion of the surgeon.

MAIN OUTCOMES AND MEASURES Patient-reported outcomes were collected at enrollment and 3 months postoperatively or 3 months postbaseline for the control cohort. The primary outcome was the Chest Dysphoria Measure (CDM). Secondary outcomes included the Transgender Congruence Scale (TCS) and Body Image Scale (BIS). Baseline demographic and surgical variables were collected, and descriptive statistics were calculated. Inverse probability of treatment weighting (IPTW) was used to estimate the association of top surgery with outcomes. Probability of treatment was estimated using gradient-boosted machines with the following covariates: baseline outcome score, age, gender identity, race, ethnicity, insurance type, body mass index, testosterone use duration, chest binding, and parental support.

RESULTS Overall, 81 patients were enrolled (mean [SD] age, 18.6 [2.7] years); 11 were lost to follow-up. Thirty-six surgical patients and 34 matched control patients completed the outcomes measures. Weighted absolute standardized mean differences were acceptable between groups with respect to body mass index, but were not comparable with respect to the remaining demographic variables baseline outcome measures. Surgical complications were minimal. IPTW analyses suggest an association between surgery and substantial improvements in CDM (−25.58 points; 95% CI, −29.18 to −21.98), TCS (7.78 points; 95% CI, 6.06-9.50), and BIS (−7.20 points; 95% CI, −11.68 to −2.72) scores.

CONCLUSIONS AND RELEVANCE Top surgery in TGNB DFAB AYA is associated with low complication rates. Top surgery is associated with improved chest dysphoria, gender congruence, and body image satisfaction in this age group.

Recent studies estimate that up to 9% of adolescents and young adults (AYA) identify as transgender or nonbinary (TGNB).[1] Many TGNB youth designated female at birth (DFAB) experience chest dysphoria, defined as distress related to the development of breasts.[2] Chest dysphoria can lead to negative physical and emotional consequences, such as lack of participation in exercise and sports, chest-binding practices that can be physically harmful when not performed safely, psychosocial distress, functional limitations, and suicidal ideation.[2-4] A retrospective review by our group of 156 TGNB DFAB AYA aged 12 to 18 years found that chest dysphoria was associated with greater anxiety and depression independent of gender dysphoria, degree of appearance congruence, and social transition status.[5] TGNB youth may perform chest binding to relieve gender dysphoria, improve social acceptance, and reduce misgendering.[3] However, chest binding may cause skin irritation, musculoskeletal pain, and shortness of breath.[6] Prior research has shown that most TGNB youth who perform chest binding desire definitive top surgery.[3]

Top surgery (ie, mastectomy or reduction) is a common gender-affirming surgery sought by TGNB DFAB individuals and has been shown to improve chest dysphoria and quality of life in adults.[7-9] Top surgery among TGNB DFAB patients increased 15% in 2020 compared with 2019.[10] While outcomes of top surgery in adults are well reported, outcomes in youth are not well described.[11-13] A qualitative study of 30 TGNB DFAB AYA reported that patients who underwent top surgery experienced near or total resolution of chest dysphoria, lack of surgical regret, and improved quality of life and functioning.[4] The Chest Dysphoria Measure (CDM) was recently introduced to assess chest dysphoria in TGNB patients, and youth who had not received top surgery had CDM scores nearly 10 times higher than those who did receive top surgery.[2] Despite these promising findings, these studies are limited by their retrospective design. There is a need for robust prospective studies in TGNB youth to guide evidence-based practices, especially with increasing proposed legislation to criminalize gender-affirming health care for minors.

The present study evaluates the association of top surgery with chest dysphoria, gender congruence, and body image in TGNB DFAB AYA. We hypothesize that top surgery will significantly improve chest dysphoria compared with patients who do not undergo top surgery. To our knowledge, this is the first and only prospective matched cohort study evaluating top surgery in youth to date.

Key Points

Question Does gender-affirming top surgery improve chest dysphoria, gender congruence, and body image in transmasculine and nonbinary adolescents and young adults?

Findings This nonrandomized, multicenter, prospective, control-matched study showed that top surgery was associated with statistically significant improvement in chest dysphoria, gender congruence, and body image at 3 months postsurgery. Surgical complications were minimal.

Meaning This study suggests that gender-affirming top surgery is associated with improved chest dysphoria, gender congruence, and body image in this age group.

Methods

Study Sample and Design

This is a multicenter, prospective, matched cohort study, in which TGNB DFAB AYA were recruited between December 2019 and April 2021 to 1 of 2 study arms: patients undergoing surgical mastectomy (treatment group) or patients not undergoing surgical mastectomy (control group). There was no attempt to randomize patients. Patients in the treatment group were recruited from Northwestern Memorial Hospital, The University of Illinois at Chicago, or Ann & Robert H. Lurie Children's Hospital of Chicago at their preoperative consults for top surgery. Inclusion criteria for treatment patients were 13 to 24 years of age at the time of surgery, transmasculine or nonbinary gender identity, DFAB, and English speaking. Gender-affirming hormone therapy was not a requirement in order to recruit patients who may not be interested in hormones but were interested in top surgery.[14] Control patients were recruited from Ann & Robert H. Lurie Children's Hospital of Chicago's Gender and Sex Development Program. Inclusion criteria for control patients were 13 to 24 years of age, presenting for gender-affirming care, transmasculine or nonbinary gender identity, DFAB, and English speaking.

Multicenter institutional review board approval was obtained. Oral and written informed consent were obtained from patients older than 18 years, and from parents when patients were younger than 18 years. Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) reporting guidelines were followed.

Intervention and Matching

All patients in the treatment arm were assessed for surgical readiness according to World Professional Association for Transgender Health guidelines Standards of Care version 7.[15] Health care professionals tailored surgical techniques to each individual's presentation and preferences. Preoperative and postoperative care protocols varied by institution, and no attempt to standardize surgical technique or protocol was made. Patients in the control group did not receive surgical intervention for chest dysphoria during the study period. Control patients who underwent top surgery during the study period were removed from the study. Two control patients were matched to each treatment patient; the 2:1 matching rate was chosen to account for expected control patient attrition, with a goal of a final 1:1 matching rate for analysis. Patients were matched by age (±1 year) and duration of testosterone therapy (±1 year) at the time of surgery.

Study Variables and Baseline Measures

Demographic variables, date of testosterone therapy initiation, and surgical details were collected via patient medical record review. Race and ethnicity information was obtained from the patient medical record; categories for these variables are

provided by the electronic medical record. Age, gender identity, sex designated at birth, and chest binding practices at initial presentation were collected with a survey distributed through Research Electronic Data Capture hosted at Northwestern University.

Parental Support of Gender Variance—Child/Youth

The Parental Support of Gender Variance (PSGV-CY) is a 21-item questionnaire assessing the respondent's perception of their relationship with their parents and perceived support for their gender identity.[16] Items are scored on a 5-point Likert scale (1 = strongly disagree, 5 = strongly agree), with higher scores indicating greater parental support. The PSGV-CY score was only measured at baseline assessment.

Patient-Reported Outcomes

Patient-reported outcomes were obtained via Research Electronic Data Capture preoperatively as a baseline and 3 months postoperatively for surgery patients or postbaseline for control patients. The 3-month time frame was chosen as a period beyond immediate postsurgical pain and euphoria, while remaining in proximity to the study intervention.

Chest Dysphoria

The primary outcome measure of this study is the CDM. The CDM is a 17-item questionnaire that measures aspects of chest dysphoria.[2] It is the only validated instrument published to date that measures chest dysphoria in TGNB AYA patients. Questions assess physical functioning, hygiene, exercise, intimate partnerships, and disruption of plans. Items are rated on a 4-point scale (0 = never, 3 = all the time) and summed, with higher scores indicating greater chest dysphoria (range, 0-51). This measure has high internal consistency (Cronbach α = 0.79 for postsurgical patients, and α = 0.89 for nonsurgical patients).[2]

Gender Congruence

The Transgender Congruence Scale (TCS) is a 12-item questionnaire that evaluates congruence between gender identity and life experience. The TCS comprises 2 subscales, appearance congruence (TCS-AC) and gender identity acceptance (TCS-GIA). The 9-item TCS-AC measures the degree to which respondents feel their external appearance represents their gender identity. The 3-item TCS-GIA measures the degree to which patients accept their self-identified gender identity rather than the gender identity designated by society. Items are rated on a 5-point scale (1 = strongly disagree, 5 = strongly agree) and summed, with higher scores representing favorable gender congruence. The TCS has strong internal consistency (Cronbach α = 0.94 for TCS-AC, α = 0.77 for TCS-GIA, and α = 0.92 for TCS).[17]

Body Image

The Body Image Scale (BIS) is a 30-item questionnaire that assesses satisfaction with various body parts, rated on a 5-point scale (1 = very satisfied, 5 = very dissatisfied) and summed.[18,19] The BIS includes primary sex characteristics, secondary sex characteristics, and neutral (nonsex-related) body parts.[18,20] The BIS includes subscales based on 6 primary, 14 secondary, and 10 neutral characteristics. The BIS has moderate internal consistency (Cronbach α = 0.65 for primary characteristics, α = 0.84 for secondary characteristics, and α = 0.81 for neutral characteristics).[20]

Data Collection and Analysis

Primary (CDM) and secondary (TCS, BIS) outcomes were analyzed with inverse probability treatment weighting (IPTW) propensity score analysis with linear regression adjustments. As robustness checks, we also estimated association of top surgery with outcomes via nearest-neighbor and poststratification matching, linear regression analysis with covariate adjustment, sensitivity analyses, and analysis of gain scores (secondary analyses).

The IPTW propensity score analysis was performed to improve balance of covariates between surgery groups and control groups on baseline measures.[21] The propensity score analysis first involved estimating the probability of receiving surgery using a gradient boosted machine as a function of the following covariates: race, ethnicity, baseline outcome scores for outcomes of interest, age, insurance type, body mass index, testosterone use duration, chest binding, and parental support of gender variance score. Probability of treatment was computed based on propensity scores, and IPTW analyses used weights inversely proportional to the probability of treatment. Balance was checked among covariates with unweighted absolute standardized mean differences (SMDs) and weighted absolute SMDs after matching. To minimize the association of remaining imbalance between the surgery and control groups after weighting, our final IPTW analysis used (weighted) linear adjustments for covariates that did not exhibit satisfactory balance after weighting. Prior to IPTW analysis, we excluded control patients with low chest dysphoria (CDM score <19), high transgender congruence (TCS score >50), and low body image dissatisfaction (BIS score <50) to better ensure that the surgery and control groups were comparable. The final cohort for IPTW analysis included 25 control patients and 35 surgical patients. Methods describing the secondary analyses are available in the online supplement (eMethods in the Supplement).

Subgroup analysis was conducted for patients younger than 18 years. This was done because the age of 18 is often used as an arbitrary cutoff for insurance companies for reimbursing care. The same covariates were used in these models, except for age. IPTW propensity score analysis was recalculated for the subgroup and outliers were removed in a similar fashion. The final cohort for IPTW subgroup analysis included 9 control patients and 15 surgical patients. All analyses were performed using R (The R Project) version 4.0.1 and RStudio (The R Project) version 1.3.959.[22]

Results

Table 1 compares baseline characteristics between surgery and control groups (mean [SD] age, 18.6 [2.7] years), with unweighted absolute SMDs and weighted absolute SMDs after

Abbreviations: ADHD, attention-deficit/hyperactivity disorder; BMI, body mass index; BIS, Body Image Scale; CDM, Chest Dysphoria Measure; NA, not applicable; PSGV, Parental Support of Gender Variance; TCS, Transgender Congruence Scale.

[a] Unweighted standardized mean differences were calculated for the entire cohort.

[b] Weighted standardized mean differences were calculated after excluding patients with CDM scores less than 19, TCS scores more than 50, and BIS scores less than 50.

[c] Indicates covariate was not used in propensity score matching.

[d] Race and ethnicity were self-identified.

propensity score matching. There were 36 patients in the surgery group and 34 patients in the control group. The planned 2:1 matching rate resulted in the anticipated 1:1 final matched rate; recruitment of control patients was difficult given the limited number of available patients and lack of testosterone-matched and age-matched controls for some surgical patients. Eleven patients were lost to follow-up (6 surgical patients and 5 control patients). Drop-out patients had significantly greater median (IQR) baseline CDM (52.0 [46.0-53.0] vs 29.0 [23.0-35.8]) and BIS (103.0 [91.5-109] vs 87.0 [75.3-96.8]) compared with retained patients. Reasons for dropping out of the study are unknown. After propensity score matching, most absolute SMDs improved with weighting, but did not achieve desired balance of less than 0.1 for all covariates.

Average age was comparable in the treatment and control groups. Most patients in both groups identified as transmasculine, were White, were not Hispanic/Latinx, and were never smokers (Table 1). Testosterone use in months was comparable in both groups; eFigure 1 in the Supplement illustrates testosterone use vs age for the surgical and control groups. Two

Table 2. Inverse Probability Treatment Weighting Propensity Score Model Results for Entire Cohort[a]

Outcome	Unweighted mean (SD)		Weighted PS model (surgery estimate [95% CI])
	Control (n = 25)	Surgery (n = 35)	
Primary outcome			
3-mo CDM score	30.50 (8.37)	3.80 (3.47)	- 25.58 (- 29.18 to - 21.98)
Secondary outcomes			
3 month			
TCS	36.90 (4.25)	44.40 (3.59)	7.78 (6.06-9.50)
TCS AC	26.80 (4.64)	33.50 (3.23)	7.11 (5.44-8.79)
BIS	91.90 (15.80)	77.00 (13.00)	- 7.20 (- 11.68 to - 2.72)
BIS secondary	38.50 (8.08)	34.10 (7.37)	- 0.11 (- 2.27 to 2.05)

Abbreviations: AC, appearance congruence; BIS, Body Image Scale; CDM, Chest Dysphoria Measure; PS, Propensity Score; TCS, Transgender Congruence Scale.

[a] Summary statistics and models were calculated after excluding patients with CDM scores less than 19, TCS scores more than 50, and BIS scores less than 50.

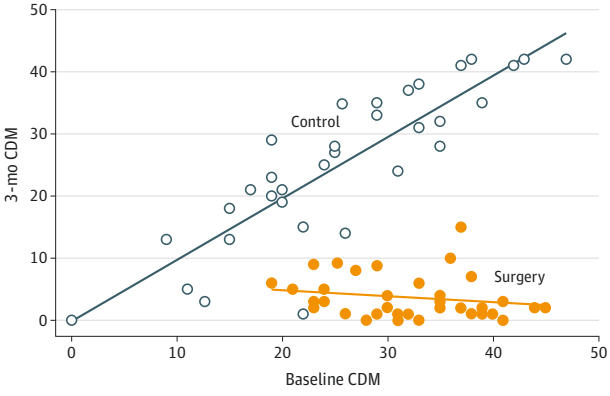
patients in the control group and 1 patient in the surgical group were not taking testosterone. Seventeen surgical patients reported performing chest binding, while 9 control patients reported binding. Complete case analysis was performed comparing demographic variables between complete and incomplete patient medical records. There were no statistically significant findings between complete and incomplete cases.

The most common surgical technique was double incision mastectomy with nipple areolar complex grafting (n = 24 [67%]), followed by nipple-sparing mastectomy (n = 10 [28%]), and periareolar mastectomy (n = 2 [6%]). The resection weight was calculated as the average value of both breasts. Median (IQR) resection weight in grams was 329.5 (111.9-552.8). Seven patients (19%) received concomitant liposuction and 29 patients (81%) received drains. Median (IQR) drain duration was 8.3 (7.0-9.0) days. Complications were minimal, with 1 hematoma (3%), 2 seromas (6%), and 1 instance of nipple loss (3%). There were no incidences of infection or delayed wound healing.

Chest Dysphoria

An exploratory data analysis was performed. Covariates including age, body mass index, and testosterone use in months appeared normally distributed. **Table 2** outlines IPTW analysis results for the primary and secondary outcomes of interest. Summary statistics for 3-month outcomes scores in each group are also reported. eFigure 2 in the Supplement illustrates boxplot distribution of propensity scores for each group. eFigure 3 in the Supplement illustrates mean and standard deviation of propensity scores across quintiles for each group. The IPTW model estimated a 25.58 (95% CI, -29.18 to -21.98) point decrease in CDM for the surgery group relative to the control group. The **Figure** illustrates 3-month CDM as a function of baseline CDM. Three-month CDM scores for all surgery patients were low, regardless of baseline CDM score. The mean (SD) difference between baseline and 3-month scores in the treatment group was -28.12 (8.32). In contrast, among control patients, CDM scores did not appear to change significantly at 3 months. The mean (SD) difference between baseline and 3-month scores in the control group was -0.52 (6.29). **Table 3** outlines subgroup analysis of outcomes among patients under 18 years. The IPTW model estimated a 25.48 (95% CI, -32.85 to -18.11) point decrease in CDM for the surgery group relative to the control group.

Figure. Baseline vs 3-Month Chest Dysphoria Measure (CDM) Scores Among Surgery and Control Patients



The x-axis represents the baseline or preoperative CDM score and the y-axis represents the 3-month CDM score. A higher CDM score indicates worsening chest dysphoria. Three-month CDM scores for all surgery patients were low, regardless of baseline CDM score. Surgery patients with high baseline CDM scores experienced greater decreases in CDM scores after top surgery, as indicated by the cluster of points at the bottom right of the graph. Among control patients, there appears to be a linear trend in baseline CDM scores vs 3-month CDM scores, indicating that CDM scores remained unchanged or increased at 3 months.

Gender Congruence

The IPTW model estimated a 7.78 (95% CI, 6.06-9.50) point increase in TCS for the surgery group relative to the control group (Table 2). Results for the TCS-AC subscore were similar (Table 2).

Table 3 reports results for the cohort of individuals younger than 18 years. The IPTW model estimated a 5.36 (95% CI, 0.47-10.24) point increase in TCS for the surgery group relative to the control group. Results for the TCS-AC subscore were similar (Table 3).

Body Image Dissatisfaction

The IPTW model estimated a 7.20 (95% CI, -11.68 to -2.72) point decrease in BIS for the surgery group relative to the control group (Table 2), indicating reduced body dissatisfaction. Results for the BIS secondary subscore did not demonstrate a significant association between surgery and score improvement (Table 2).

Table 3 reports results for the younger than 18 years cohort. The IPTW model estimated a 7.83 (95% CI, -13.98 to -1.67)

Table 3. Inverse Probability Treatment Weighting Propensity Score Model Results for the Younger than 18 Years Cohort

Outcome	Mean (SD)		Weighted PS model (surgery estimate [95% CI])
	Control (n = 9)	Surgery (n = 15)	
Primary outcome			
3-mo CDM score	32.80 (8.89)	3.47 (3.14)	-25.48 (-32.85 to -18.11)
Secondary outcomes			
3 month			
TCS	38.10 (3.06)	45.30 (3.92)	5.36 (0.47-10.24)
TCS AC	27.30 (2.4)	34.40 (3.83)	5.41 (0.83-10.00)
BIS	97.30 (14.20)	79.90 (12.40)	-7.83 (-13.98 to -1.67)
BIS secondary	40.00 (7.30)	35.20 (6.58)	0.99 (-2.52 to 4.51)

Abbreviations: AC, appearance congruence; BIS, Body Image Scale; CDM, Chest Dysphoria Measure; PS, propensity score; TCS, Transgender Congruence Scale.

point decrease in BIS for the surgery group relative to the control group. Results for the BIS secondary subscore did not demonstrate a significant association between surgery and score improvement (Table 3).

Secondary Analyses

Results for the secondary analyses are available in the eResults in the Supplement. eTables 1 through 3 in the Supplement present these results, which are similar to those of the IPTW analysis.

Discussion

To our knowledge, we present the first and largest prospective matched study evaluating quantitative outcomes of top surgery among TGNB DFAB AYA. We found that top surgery was associated with significant improvement in chest dysphoria (measured by the CDM) 3 months postoperatively; patients receiving surgery exhibited substantial decreases in CDM from presurgery to postsurgery and their reductions in CDM were significantly greater than those for patients who did not undergo top surgery. Top surgery also led to significant improvements in gender congruence (TCS) and body image satisfaction (BIS) at 3 months postoperatively. Surgical complications were minimal and comparable with those in adult patients.[23-28]

Chest dysphoria can be treated with top surgery, and patients with minimal or no chest dysphoria may not require or desire top surgery. We removed participants with baseline CDM scores of less than 19 from the control group prior to conducting our primary analysis; this was the lowest CDM score in the surgery group. We acknowledge that several control patients with low CDM scores have not sought top surgery because of minimal chest dysphoria. Surgeons should consider treating patients with a diagnosis of gender dysphoria and who experience the negative mental and physical health effects of chest dysphoria.

In our practice, there is no predetermined timeline for gender-affirming medical or surgical treatment; patients are assessed individually by a multidisciplinary team for readiness. There is no evidence to support delaying surgery for eligible patients based on age. With all other covariates remaining equal, patients' baseline outcome score was significantly associated with improvement in the 3-month outcome score in the IPTW models. For all outcome measures, the effect size of improvement was less than 1 point, and the clinical significance of this finding is minimal. This does not support the notion that dysphoria will improve over time without intervention. Treatment patients demonstrated significant improvement and a greater effect size in all measures after surgery compared to control patients.

TGNB youth frequently encounter systemic barriers to care. Obtaining insurance coverage for top surgery is a common problem; while World Professional Association for Transgender Health Standards of Care version 7 do not recommend a specific age for top surgery, many insurance plans deny coverage for patients younger than 18 years.[29] Medicolegal barriers exist as many states have ratified legislation prohibiting, and even criminalizing, medical and surgical therapy in TGNB minors.[30,31] This can lead to delays in care and health care avoidance, which result in worsening mental health burden.[32] The American Academy of Pediatrics and the Pediatric Endocrine Society have issued statements in support of providing gender-affirming medical and surgical care to TGNB minors, contending that it is effective, safe, the standard of care, and should be covered by insurers.[33-35] In this study, patients younger than 18 years demonstrated parallel trends of improved CDM, TCS, and BIS compared with the entire cohort, demonstrating the robustness of our findings in this age subgroup. Findings from this study can help dispel misconceptions that gender-affirming treatment is experimental and support evidence-based practices of top surgery. Our retrospective review demonstrated associations between chest dysphoria and anxiety and depression; top surgery can improve chest dysphoria, thereby leading to improvements in quality of life.[5] Our results also corroborate studies that gender-affirming therapy improves mental health and quality of life among TGNB youth.

Limitations

Our study is not without limitations. Analyses omit 11 patients whose outcomes were not measured due to attrition. Furthermore, we acknowledge that patients in the treatment group who were able to access surgery may have greater socioeconomic status and parental support, possibly introducing sampling bias. Patients in the control group may have desired top

surgery but were unable obtain it due to both medical and nonmedical barriers; this could not be controlled during analysis. We were unable to achieve a high degree of balance on baseline measures between surgery and control groups, even after propensity score adjustments. Weighted SMDs exceeded 0.1 for many covariates, rendering analyses susceptible to confounding. As a sensitivity analysis, we computed E-values in the Supplement to quantify the potential effect of confounding; reported E-values suggest an extremely high degree of confounding would need to be present to negate estimated treatment effects. We acknowledge that there may be differences between groups and intrinsic differences in the gender experience that are unmeasurable. In the future, control patients should be better matched to treatment patients, with matching using several demographic variables and baseline outcome measures. This will permit estimation of a causal effect on subsequent analyses. Some insurance plans require testosterone therapy for 1 year prior to surgery; this may negatively affect nonbinary patients who do not undergo testosterone therapy and may have limited inclusion of this patient population in our cohort.[2] Nonbinary patients continue to be underrepresented in the literature; subgroup analysis of nonbinary patients was not possible due to small sample size and future studies should focus on this population. One-year follow up data are currently being collected to determine the long-term effect of top surgery on chest dysphoria, gender congruence, and body image satisfaction.

Conclusions

To our knowledge, we present the first prospective study evaluating the association of top surgery with chest dysphoria and gender congruence in TGNB DFAB AYA. Top surgery in this age group is associated with improved chest dysphoria, gender congruence, and body image satisfaction.

EDITORIAL

Top Surgery in Adolescents and Young Adults—Effective and Medically Necessary

Kishan M. Thadikonda, MD; Katherine M. Gast, MD, MS

There are an estimated 1.6 million transgender people in the United States, of which 300 000 are younger than 18 years.[1] Transgender, nonbinary, and gender expansive/nonconforming (TNG) patients experience health disparities including increased levels of poverty, homelessness, and suicidality.[2] Among transgender youth, one-half consider suicide and over a third attempt it.[3]

Adolescent gender-affirming care is recognized by the American Academy of Pediatrics, Pediatric Endocrine Society, American Academy of Family Physicians, American Academy of Child and Adolescent Psychiatry, and American Medical Association as medically necessary and potentially lifesaving.[4] Puberty suppression is associated with significantly decreased depressive symptoms, behavioral and emotional problems, improved general functioning, and lower lifetime suicidal ideation.[3,5] Gender-affirming hormonal therapy in adolescent patients including estrogen and testosterone has been shown to significantly increase levels of general well-being and decrease levels of suicidal ideation.[6]

Related article

The majority of adolescents currently seeking gender-related care identify on the masculine spectrum.[7] Among young patients, chest dysphoria worsens over time with testosterone therapy, causing increased distress, limitations in functioning, and suicidal ideation.[8,9] TNG patients bind their chests to alleviate dysphoria, which results in negative effects on respiratory, musculoskeletal, skin, breast, pain, and psychosocial domains.[10] Waiting for chest surgery until age 18 years induces harm and undue suffering for many patients. Gender-affirming top surgery has been shown to have major positive effects on mental health and quality-of-life metrics including self-confidence, body comfort, body satisfaction, and emotional well-being.[10] Regret in gender-affirming surgery is rare, affecting approximately 1% among all procedures.[11]

Despite strong evidence demonstrating the effectiveness of gender-affirmation care and expert medical opinion, 2022 has been a record year for proposed legislation against gender-diverse patients. According to the Human Rights Campaign, one of the nation's largest lesbian, gay, bisexual, transgender, queer or questioning (LGBTQ+) advocacy groups, more than 300 bills have been introduced in states around the US, with 20 states introducing bills that limit or ban gender-related medical treatment for patients younger than 18 years.[12] In April 2021, Arkansas became the first state to outlaw providing gender-affirming care to minors.

In the setting of dire health disparities and inconsistent access to care both geographically and through insurance coverage, additional research demonstrating the benefit of gender-affirming surgery in this population is needed. This article by Ascha et al[13] is the first to look at patient-reported outcomes in adolescent and young adult (AYA) patients after top surgery. It is a multicenter, prospective, matched study looking at AYA TNG patients who pursue top surgery vs those who do not. The article focuses on comparing patient-reported outcome measures (PROMs) surrounding chest dysphoria, body image, and gender congruence.

The authors show that AYA TNG patients between the ages of 12 and 21 years who have top surgery have reduced dysphoria, improved body image, and increased gender congruence following chest surgery. Additionally, when compared with patients who did not undergo chest surgery, patients who had surgery did significantly better when using the same outcome measures. A subgroup analysis of patients younger than 18 years demonstrated the same results supporting chest surgery as an effective treatment modality in the AYA TNG patient population despite common insurance-mandated age requirements.

We commend the authors on designing this study with every effort made to eliminate confounding variables. However, it is important to note that despite this being a multicenter, prospective, matched cohort study there were still significant differences among patients who received and did not receive surgery when it came to variables such as parental support, ethnicity, chest binding, and testosterone use, among others. The authors of the study acknowledged this and attempted to adjust for any confounding with their data analysis approach but were unable to completely account for intrinsic differences between the groups. We agree with their assertion that further research comparing surgical and nonsurgical patients should focus specifically on matching with respect to key variables that may influence outcomes.

TNG outcomes research is limited by the quality and availability of validated PROMs as recent systematic reviews have demonstrated.[14] While the authors have made an effort to use 3 well-documented PROMs, only the Transgender Congruence Scale has been validated in the TNG population, albeit not to assess the effects of gender-affirmation surgery. The Body Image Scale has been validated in the transgender patient population but not with nonbinary patients. The Chest Dysphoria Measure, which is the primary outcome in this study, has not yet been validated for use. While the improvement across all these outcome measures in the surgical cohort is impressive given the absence of a well-validated outcome measure for gender-affirmation surgery, it is important to remember that developing validated PROMs is essential in what is sure to be heavily scrutinized research. Future research should

focus on rigorous methodology for development of PROMs in gender-affirmation surgery as well modifications and validation of existing well-accepted instruments such as the BODY-Q, FACE-Q, and BREAST-Q in patients seeking gender-affirmation surgery.

While the study was designed to be inclusive of all AYA TNG patients, nonbinary patients represented 13% of the patients total and only 8% of the surgical cohort. As the authors noted in their discussion, nonbinary patients are not well understood as a patient population when it comes to gender-affirmation surgery and are often included in studies with transgender patients despite clear differences. Future research needs to exclusively focus on studying goals, expectations, and satisfaction of nonbinary patients seeking gender-affirmation surgery rather than combining them with transgender patients.

This study represents an important milestone in gender-affirmation research as it shows that not only is top surgery safe in AYA patients, but it is effective in reducing dysphoria, which is known to be associated with worse health outcomes in TNG patients. It will be important to follow up young cohorts like this forward in time to prove that these benefits are not temporary and endure as patients age. Despite legislative efforts to curb gender-affirming care in the pediatric population, there has been undeniable forward progress overall. Further research efforts like this will continue to support gender-affirming care and break down barriers to surgical treatment for this vulnerable patient population.

#GSFC Is Only 5 Days Away!

Dear Parents and Caregivers,

If you haven't gotten your tickets yet, there is less than a week left to register for the **2022 Annual Online Family Conference.**

As a reminder, the conference will be entirely online and features workshops for families in beginning of their journey, as well as several in-depth sessions and advanced topics for even the most experienced parents, guardians, and caregivers.

There will also be **opportunities to meet with other parents, guardians, and caregivers** in our dedicated Community Space — After attending workshops, come by and process what you have learned.

We look forward to seeing you all on October 1st and 2nd!

Purchase Your Ticket Today >

Workshop Block Three | 2:30pm (PDT)

Using Gender Support Plans

For many caregivers and educators, even the possibility of a young person announcing a change in their gender status at school seems overwhelming if not impossible. However, some transgender students are taking this courageous step and successfully doing so while remaining enrolled in their educational institution. What are the key elements of a positive experience? What preparation, training and conditions need to be considered as students and their families make the difficult decision to support a child's authentic gender in the classroom? After exploring key principles that must be considered when a student shares their gender with their school community, the session will present specific tools and resources for supporting a student to safely and successfully do so.

Intro to Neo-Identities and Neopronouns

An Introduction to Neo-identities and Neopronouns" serves as an introduction to neo-identities and neopronouns. This presentation will cover basic terminology, the origins of neo-identities, and what role neo-identities and neo-pronouns play in gender creativity. We will also dive into how neo-identities and neopronouns are especially stigmatized within and outside of the LGBTQ+ community, and how you can advocate for your child at school and in public. Following this, we will have a Q&A and I will provide further resources to practice using neopronouns and to learn more about neo-identities.

Being a Black Family Inside the Rainbow

Gender minority children are present in every corner of the world. Their lived experiences will vary depending on the social construct in which they find themselves. Black families have increasingly accepted their gender minority children, but continue to face very real social, religious, and cultural resistance to full acceptance. The purpose of this workshop is to center Black families as we probe the myriad successes and challenges that Black families may experience along the journey of launching our wonderful gender minority children into safe, productive, and happy lives.

'Are You OK?' - Documenting the Survival and Joy of Trans Youth Across America

Award-winning queer/trans identified photographer and author Jesse Freidin will present portraits and interviews from his national series 'Are You Ok?' which documents trans and nonbinary youth's reaction to anti-trans legislation across the country. Participants will learn how to create safe and affirming dialogues with their trans children around these difficult issues, while helping them see the power and activism of their own personal experiences. Through creativity, trans people and our allies can speak out and become our own saviors. This workshop will give you the tools to do just that.

Gender Affirming Surgery Decisions - Highlighting Patient, Parent, and Surgeon Perspectives

Making decisions about gender affirming surgery can feel exciting, overwhelming, scary and a multitude of other emotions all at the same time. In this session we'll hear from a patient who had top surgery, a parent who has supported their child through surgery and surgeon Dr. Facque from The Gender Confirmation Center. We will touch on questions such as…How do you know surgery is the right decision? How as a parent/caregiver can I best support my child? What is recovery like? How do I prepare myself and my child? And so much more. Audience questions are encouraged!

Subject: Re: Staff Meeting 9/27

Hi Steve,

Thanks very much for the update - yes, lots to update!
I forwarded the meeting invite to [redacted] and will ask him to join right at the beginning if possible.

Here are some agenda items -

1. [redacted] study - [redacted] 5-10 min
2. CAGC Personnel updates - [redacted] leaving Oakland CAGC, [redacted] & [redacted] joined from pediatric psychiatry. Practice Coordinator in SF has accepted (I think [redacted] told me she starts in Oct 2022). Other updates re: NP hires? Psychology? SW? Ped Endo Faculty?
3. Workflow w/LOS review now that [redacted] and [redacted] have joined?
4. CAGC capacity issues and adult transition program - Adult GAHP now w/new provider Steve Nguyen, MD (they/them)
5. Security concerns - [redacted] (Vice Chair of Operations at BCH) and [redacted] (Communications) along with UCPD and UCSF PD lieutenants joined the Peds Endo Division meeting on Friday, 09/23 to provide updates and their personal contact information if any concerns arise. Scripting to be shared for front line staff (front desk, LVN, SW, etc). Crisis planning in process. Website updates?
6. Updates on move to Pritzker Building?
7. SOC8 out - not sure we'll have any time to discuss this

Best,
[redacted]

Young Adult Psychological Outcome After Puberty Suppression and Gender Reassignment

WHAT'S KNOWN ON THIS SUBJECT: Puberty suppression has rapidly become part of the standard clinical management protocols for transgender adolescents. To date, there is only limited evidence for the long-term effectiveness of this approach after gender reassignment (cross-sex hormones and surgery).

WHAT THIS STUDY ADDS: In young adulthood, gender dysphoria had resolved, psychological functioning had steadily improved, and well-being was comparable to same-age peers. The clinical protocol including puberty suppression had provided these formerly gender-dysphoric youth the opportunity to develop into well-functioning young adults.

abstract

BACKGROUND: In recent years, puberty suppression by means of gonadotropin-releasing hormone analogs has become accepted in clinical management of adolescents who have gender dysphoria (GD). The current study is the first longer-term longitudinal evaluation of the effectiveness of this approach.

METHODS: A total of 55 young transgender adults (22 transwomen and 33 transmen) who had received puberty suppression during adolescence were assessed 3 times: before the start of puberty suppression (mean age, 13.6 years), when cross-sex hormones were introduced (mean age, 16.7 years), and at least 1 year after gender reassignment surgery (mean age, 20.7 years). Psychological functioning (GD, body image, global functioning, depression, anxiety, emotional and behavioral problems) and objective (social and educational/professional functioning) and subjective (quality of life, satisfaction with life and happiness) well-being were investigated.

RESULTS: After gender reassignment, in young adulthood, the GD was alleviated and psychological functioning had steadily improved. Well-being was similar to or better than same-age young adults from the general population. Improvements in psychological functioning were positively correlated with postsurgical subjective well-being.

CONCLUSIONS: A clinical protocol of a multidisciplinary team with mental health professionals, physicians, and surgeons, including puberty suppression, followed by cross-sex hormones and gender reassignment surgery, provides gender dysphoric youth who seek gender reassignment from early puberty on, the opportunity to develop into well-functioning young adults. *Pediatrics* 2014;134:696–704

Transgender adolescents experience an incongruence between their assigned gender and their experienced gender and may meet the Diagnostic and Statistical Manual of Mental Disorders 5 criteria for gender dysphoria (GD).[1] Fifteen years ago, pubertal delay was introduced as an aid in the treatment of a gender dysphoric adolescent.[2] Although not without debate, blocking pubertal development has rapidly become more widely available[3–7] and is now part of the clinical management guidelines for GD.[8–12]

Gonadotropin-releasing hormone analogs (GnRHa) are a putatively fully reversible[13] medical intervention intended to relieve distress that gender dysphoric adolescents experience when their secondary sex characteristics develop. A protocol designed by Cohen-Kettenis and Delemarre-van de Waal[14] (sometimes referred to as "the Dutch model")[4,7] considers adolescents, after a comprehensive psychological evaluation with many sessions over a longer period of time, eligible for puberty suppression, cross-sex hormones (CSH), and gender reassignment surgery (GRS) at the respective ages of 12, 16, and 18 years when there is a history of GD; no psychosocial problems interfering with assessment or treatment, for example, treatment might be postponed because of continuous moving from 1 institution to another or repeated psychiatric crises; adequate family or other support; and good comprehension of the impact of medical interventions.[12] Puberty suppression is only started after the adolescent actually enters the first stages of puberty (Tanner stages 2–3), because although in most prepubertal children GD will desist, onset of puberty serves as a critical diagnostic stage, because the likelihood that GD will persist into adulthood is much higher in adolescence than in the case of childhood GD.[15,16]

Despite the apparent usefulness of puberty suppression, there is only limited evidence available about the effectiveness of this approach. In the first cohort of adolescents who received GnRHa, we demonstrated an improvement in several domains of psychological functioning after, on average, 2 years of puberty suppression while GD remained unchanged.[16] The current study is a longer-term evaluation of the same cohort, on average, 6 years after their initial presentation at the gender identity clinic. This time, we were not only interested in psychological functioning and GD, but added as important outcome measures objective and subjective well-being (often referred to as "quality of life"), that is, the individuals' social life circumstances and their perceptions of satisfaction with life and happiness.[17–19] After all, treatment cannot be considered a success if GD resolves without young adults reporting they are healthy, content with their lives, and in a position to make a good start with their adult professional and personal lives.[20] Because various studies show that transgender youth may present with psychosocial problems,[21,22] a clinical approach that includes both medical (puberty suppression) and mental health support (regular sessions, treatment when necessary, see Cohen-Kettenis et al[12]) aims to improve long-term well-being in all respects.

In the present longitudinal study, 3 primary research questions are addressed. Do gender dysphoric youth improve over time with medical intervention consisting of GnRHa, CSH, and GRS? After gender reassignment, how satisfied are young adults with their treatment and how do they evaluate their objective and subjective well-being? Finally, do young people who report relatively greater gains in psychological functioning also report a higher subjective well-being after gender reassignment?

METHODS

Participants and Procedure

Participants included 55 young adults (22 transwomen [natal males who have a female gender identity] and 33 transmen [natal females who have a male gender identity]) of the first cohort of 70 adolescents who had GD who were prescribed puberty suppression at the Center of Expertise on Gender Dysphoria of the VU University Medical Center and continued with GRS between 2004 and 2011. These adolescents belonged to a group of 196 consecutively referred adolescents between 2000 and 2008, of whom 140 had been considered eligible for medical intervention and 111 were prescribed puberty suppression (see de Vries et al[16]). The young adults were invited between 2008 and 2012, when they were at least 1 year past their GRS (vaginoplasty for transwomen, mastectomy and hysterectomy with ovariectomy for transmen; many transmen chose not to undergo a phalloplasty or were on a long waiting list). Nonparticipation (n = 15, 11 transwomen and 4 transmen) was attributable to not being 1 year postsurgical yet (n = 6), refusal (n = 2), failure to return questionnaires (n = 2), being medically not eligible (eg, uncontrolled diabetes, morbid obesity) for surgery (n = 3), dropping out of care (n = 1), and 1 transfemale died after her vaginoplasty owing to a postsurgical necrotizing fasciitis. Between the 55 participants and the 15 nonparticipating individuals, Student's t tests revealed no significant differences on any of the pretreatment variables. A similar lack of differences was found between the 40 participants who had complete data and the 15 who were missing some data.

Participants were assessed 3 times: pre-treatment (T0, at intake), during treatment (T1, at initiation of CSH), and post-treatment (T2, 1 year after GRS). See Table 1 for age at the different time points. The VU University Medical Center medical ethics committee approved the study, and all participants gave informed consent.

TABLE 1 Age at Different Treatment Milestones and Intelligence by Gender

Variable	All Participants[a] ($N = 55$)		Transwomen (Natal Males) ($N = 22$)	Transmen (Natal Females) ($N = 33$)
Age, y	Mean (SD)	Range	Mean (SD)	Mean (SD)
At assessment PreT	13.6 (1.9)	11.1–17.0	13.6 (1.8)	13.7 (2.0)
At start of GnRHa	14.8 (1.8)	11.5–18.5	14.8 (2.0)	14.9 (1.9)
At start of CSH	16.7 (1.1)	13.9–19.0	16.5 (1.3)	16.8 (1.0)
At GRS	19.2 (0.9)	18.0–21.3	19.6 (0.9)	19.0 (0.8)
At assessment PostT	20.7 (1.0)	19.5–22.8	21.0 (1.1)	20.5 (0.8)
Full-scale intelligence[b]	99.0 (14.3)	70–128	97.8 (14.2)	100.4 (14.3)

PostT, post-treatment; PreT, pre-treatment.

[a] Comparisons between those who had complete data ($n = 40$) and those who had missing data on the CBCL/ABCL ($n = 15$) reveal no significant differences between the groups in age at any point in the study or in natal sex.

[b] WISC-R, the WISC-III, or the WAIS-III at first assessment, depending on age and time.[45–47]

Measures

Time was the predominate independent variable. Other demographic characteristics were incorporated in some models, including, age, natal sex, Full Scale Intelligence, and parent marital status; where significantly different they are reported.

Gender Dysphoria/Body Image

There was 1 indicator measuring GD (Utrecht Gender Dysphoria Scale [UGDS]) and 3 indicators measuring body image (Body Image Scale [BIS] with primary, secondary, and neutral subscales). Higher UGDS (12 items, 1–5 range, total score ranging from 12–60) total scores indicate higher levels of GD, for example, "I feel a continuous desire to be treated as a man/woman."[23] There are separate versions of the UGDS for males and females with mostly different items, permitting no gender difference analyses. BIS (30 items, 1–5 range) higher scores indicate more dissatisfaction with primary sex characteristics (important gender-defining body characteristics, eg, genitals, breasts), secondary sex characteristics (less obvious gender-defining features, eg, hips, body hair), and neutral (hormonally unresponsive) body characteristics (eg, face, height).[24] The male and the female BIS are identical except for the sexual body parts. The UGDS and the BIS of the natal gender were administered at T0 and T1. At T1, we chose the UGDS of the assigned gender, because no physical changes had occurred yet and some were still treated as their assigned gender. This way, however, decreased GD caused by social transitioning was not measured. At T2 young adults filled out the versions of their affirmed gender.

Psychological Functioning

There were 10 indicators assessing psychological functioning. To assess global functioning, the Children's Global Assessment Scale (CGAS) was used.[25] The Beck Depression Inventory (BDI; 21 items, 0–3 range) indicates presence and severity of depressive symptoms.[26] Spielberger's Trait Anger (TPI) and Spielberger's Trait Anxiety (STAI; 10 and 20 items, respectively, 1–4 range) scales of the State-Trait Personality Inventory were administered to assess the tendency to respond with anxiety or anger, respectively, to a threatening or annoying situation.[27,28]

Behavioral and emotional problems were assessed by the total, internalizing, and externalizing T scores as well as clinical range scores for these 3 indices (T score >63) of the Child/Adult Behavior Checklist (CBCL at T0 and T1, ABCL at T2), the Youth/Adult Self-Report (YSR at T0 and T1, ASR at T2).[29–31] Items referring to GD in the CBCL/YSR and ABCL/ASR were scored as 0 (for more explanation, see Cohen-Kettenis et al[32]).

Objective and Subjective Well-Being (T2 Only)

A self-constructed questionnaire was used to ask the young adults about their current life circumstances, such as living conditions, school and employment, and social support (objective well-being), and satisfaction with treatment (subjective well-being). Three instruments further assessed subjective well-being. To measure quality of life, the WHOQOL-BREF (quality of life measure developed by the World Health Organization) was administered (24 items, 4 domains: Physical Health, Psychological Health, Social Relationships, and Environment, 1–5 range with higher scores indicating better quality of life).[17] The Satisfaction With Life Scale (SWLS, 5 items, 5–35 range, 20 being neutral) was used to assess life satisfaction.[18] Higher scores on the Subjective Happiness Scale (SHS, 4 items, 7-point Likert scale, average score 1–7) reflect greater happiness.[19]

Data Analyses

General Linear Models examined the repeated measures with an analysis of variance-based model, incorporating continuous and categorical predictors, and correcting for the unbalanced cell sizes. Linear and quadratic effects of the 14 indicators across 3 time points, with time as the within-subjects factor, and sex as a between-subjects factor in a second set of analyses are reported in Tables 2 and 3 and Fig 1. A linear effect signifies an overall change across T0 to T2. A quadratic effect signifies that the change was not continuous, such as when an indicator does not improve from T0 to T1 but improves from T1 to T2. It is possible to have both a significant linear and quadratic effect on the same

[a] Participants who had complete data at all 3 waves were included. Some assessments were added to the study later, yielding fewer total participants for those scales.

indicator. Other potential between-subjects factors (age, total IQ, parental marital status) were examined but excluded owing to a lack of relationship with the 14 indicators at T0. The 1 exception, age predicting secondary sex characteristics, is described below in the findings. We compared T2 sample means to population norms for subjective well-being using 1-sample *t* tests from previously published validation studies. Finally, we examined T2 subjective well-being correlations with residual change scores from T0 to T2 on the 14 indicators (an indicator of who improved relatively more or less over time).

All measures used were self-reported, except the CGAS (attending clinician) and the CBCL/ASR (parents). Each participant was given all measures at each of 3 assessments. Numbers varied across indicators owing to the later inclusion of the YSR, CGAS, BDI, TPI, and STAI, yielding 8 persons who had missing data at T0 and a clinician error yielding missing data at T1 for 10 participants on the UGDS. Dutch versions were used (see de Vries et al[16]).

RESULTS

Gender Dysphoria and Body Satisfaction

Figure 1 and Table 2 show that GD and body image difficulties persisted through puberty suppression (at T0 and T1) and remitted after the administration of CSH and GRS (at T2) (significant linear effects in 3 of 4 indicators, and significant quadratic effects in all indicators). Time by sex interactions revealed that transwomen reported more satisfaction over time with primary sex characteristics than transmen and a continuous improvement in satisfaction with secondary and neutral sex characteristics. Transmen reported more dissatisfaction with secondary and neutral sex characteristics at T1 than T0, but improvement in both from T1 to T2. Age was a significant covariate with secondary sex characteristics (the only significant demographic covariate with any outcome indicator in the study), indicating that older individuals were more dissatisfied at T0, but the age gap in body satisfaction narrowed over time ($F(1, 42) = 8.18$; $P < .01$).

Psychological Functioning

As presented in Table 3, significant linear effects showed improvement over time in global functioning (CGAS), CBCL/ABCL total, internalizing and externalizing *T* scores, and YSR/ASR total and internalizing *T* scores. Quadratic effects revealed decreases from T0 to T1 followed by increases from T1 to T2 in depression and YSR/ASR internalizing *T* scores. Quadratic trends revealed decreases from T0 to T1, followed by increases from T1 to T2 in depression and YSR/ASR internalizing *T* scores. For all CBCL/ABCL and YSR/ASR indicators except YSR/ASR externalizing, the percentage in the clinical range dropped significantly (McNemar's test, *P* value <0.05) from T0 to T1, from T0 to T2, or from T1 to T2.

Over time, transmen showed reduced anger, anxiety, and CBCL/ABCL externalizing *T* scores, whereas transwomen showed stable or slightly more symptomatology on these measures. Transwomen improved in CBCL/ABCL total *T* scores in a quadratic fashion (all the improvement between T1 and T2),

$_{xy}$ Percent clinical range, shared subscripts indicate no significant difference in values. In no case was an increase in percent in the clinical range significant from 1 time point to any other time point, indicating an overall decline or stability of clinical symptoms over time.

[a] Participants who had complete data at all 3 waves were included. Some assessments were added to the study later, yielding fewer total participants for those scales.

whereas transmen improved steadily across the 3 time points (linear effect only).

Objective Well-Being

At T2, the participants were vocationally similar to the Dutch population except they were slightly more likely to live with parents (67% vs 63%), and more likely, when studying, to be pursuing higher education (58% vs 31%).[33]

Families were supportive of the transitioning process: 95% of mothers, 80% of fathers, and 87% of siblings. Most (79%) young adults reported having 3 or more friends, were satisfied with their male (82%) and female peers (88%), and almost all (95%) had received support from friends regarding their gender reassignment. After their GRS, many participants (89%) reported having been never or seldom called names or harassed. The majority (71%) had experienced social transitioning as easy.

Subjective Well-Being

None of the participants reported regret during puberty suppression, CSH

treatment, or after GRS. Satisfaction with appearance in the new gender was high, and at T2 no one reported being treated by others as someone of their assigned gender. All young adults reported they were very or fairly satisfied with their surgeries.

Mean scores on WHOQOL-BREF, the SWLS, and the SHS are presented in Table 4, together with scores from large validation and reliability studies of these measures,[17,19,34] revealing similar scores in all areas except WHOQOL-Environment subdomain, which was higher for the participants than the norm. There were some differences across gender; transwomen scored higher than transmen on the SWLS (mean = 27.7; SD = 5.0 vs mean = 23.2; SD = 6.0; t (52) = 2.82; $P < .01$) and on the psychological subdomain of the WHOQOL (mean = 15.77; SD = 2.0 vs mean = 13.92; SD = 2.5; t (53) = 2.95; $P < .01$).

Correlations With Residual Change Scores

The residual change scores of secondary sex characteristics, global functioning, depression, anger, anxiety, and YSR total, internalizing and externalizing from T0 to T2, were significantly correlated with the 6 T2 quality of life indicators. Most correlation coefficients were within the moderate to large magnitude (eg, 0.30–0.60), except depression, which was highly correlated (0.60–0.80) (see Table 5).

DISCUSSION

Results of this first long-term evaluation of puberty suppression among transgender adolescents after CSH treatment and GRS indicate that not only was GD resolved, but well-being was in many respects comparable to peers.

The effectiveness of CSH and GRS for the treatment of GD in adolescents is in line with findings in adult transsexuals.[35,36] Whereas some studies show that poor surgical results are a determinant of postoperative psychopathology and of dissatisfaction and regret,[37,38] all young adults in this study were generally satisfied with their physical appearance and none regretted treatment. Puberty suppression had caused their bodies to

not (further) develop contrary to their experienced gender.

Psychological functioning improved steadily over time, resulting in rates of clinical problems that are indistinguishable from general population samples (eg, percent in the clinical range dropped from 30% to 7% on the YSR/ASR[30]) and quality of life, satisfaction with life, and subjective happiness comparable to same-age peers.[17,19,34] Apparently the clinical protocol of a multidisciplinary team with mental health professionals, physicians, and surgeons gave these formerly gender dysphoric youth the opportunity to develop into well-functioning young adults. These individuals, of whom an even higher percentage than the general population were pursuing higher education, seem different from the transgender youth in community samples with high rates of mental health disorders, suicidality and self-harming behavior, and poor access to health services.[21,22,39,40]

In this study, young adults who experienced relatively greater improvements in psychological functioning were more likely to also report higher levels of subjective postsurgical well-being. This finding suggests value to the protocol that involves monitoring the adolescents' functioning, physically and psychologically, over many years, and providing more support whenever necessary.

This clinic-referred sample perceived the Environmental subdomain (with items like "access to health and social care" and "physical safety and security") of the WHOQOL-BREF as even better than the Dutch standardization sample.[17] Whereas in some other contexts transgender youth may experience gender-related abuse and victimization,[22,41,42] the positive results may also be attributable to supportive parents, open-minded peers, and the social and financial support (treatment is covered by health insurance) that gender dysphoric individuals can receive in the Netherlands.

Both genders benefitted from the clinical approach, although transwomen showed more improvement in body image satisfaction (secondary sex characteristics) and in psychological functioning (anger and anxiety). None of the transmen in this study had yet had a phalloplasty because of waiting lists or

a desire for improved surgery techniques. This finding warrants further study of the specific concerns of young transmen.

Despite promising findings, there were various limitations. First, the study sample was small and came from only 1 clinic. Second, this study did not focus on physical side effects of treatment. Publications on physical parameters of the same cohort of adolescents are submitted or in preparation. A concurring finding exists in the 22-year follow-up of the well-functioning first case now at age 35 years who has no clinical signs of a negative impact of earlier puberty suppression on brain development, metabolic and endocrine parameters, or bone mineral density.[43] Third, despite the absence of pretreatment differences on measured indicators, a selection bias could exist between adolescents of the original cohort that participated in this study compared with nonparticipants.

Age criteria for puberty suppression and CSH are under debate, although they worked well for adolescents in the current study. Especially in natal females, puberty will often start before the age of 12 years. Despite the fact that developing evidence suggests that cognitive and affective cross-gender identification, social role transition, and age at assessment are related to persistence of childhood GD into adolescence, predicting individual persistence at a young age will always remain difficult.[44] The age criterion of 16 years for the start of CSH may be problematic especially for transwomen, as growth in height continues as long as cross-sex steroids are not provided (causing the growth plates to close). Therefore, psychological maturity and the capacity to give full informed consent may surface as the required criteria for puberty suppression and CSH[45] in cases that meet other eligibility criteria.

CONCLUSIONS

Results of this study provide first evidence that, after CSH and GRS, a treatment protocol including puberty suppression leads to improved psychological functioning of transgender adolescents. While enabling them to make important age-appropriate developmental transitions, it contributes to a satisfactory objective and subjective well-being in young adulthood. Clinicians should realize that it is not only early medical intervention that determines this success, but also a comprehensive multidisciplinary approach that attends to the adolescents' GD as well as their further well-being and a supportive environment.

ACKNOWLEDGMENTS

The authors thank the young adults and their parents for their repeated participation in this study over the years.

Subject: CAGC Faculty Update

Hi [redacted],

Shana Tovah to you and your family!

Do you have any updates re CAGC faculty? Has [redacted] officially accepted (independent of the offer letter)? From what I understand, the offer letter is still being worked on to include [redacted] time in the adult transgender clinic. Also, given that [redacted] will soon no longer be seeing patients at the Oakland-CAGC, does this strengthen our case for hiring an additional pediatric endocrinologist—e.g. [redacted]? Has there been any f/u communication with [redacted] from Ali as Search Committee Chair?

We have our monthly CAGC Staff Meeting today at 5:15 PM, and I'd like to update the team on the status of faculty recruitment—in particular, if I can say anything about [redacted]

Thanks and best wishes,

Steve

Hi all,
What if we targeted late January / early February?
That way [redacted] & [redacted] would (hopefully) be able to attend, and that would give us all time to ensure folks are available.
@[redacted] - do you have any restrictions during that time? I was hoping to secure a time when you would be available to talk through some of the build issues we've encountered.
Thanks,
[redacted]

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

External Mail

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,
[redacted]

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am adding in [redacted] and [redacted] from SF DPH Primary Care.

[redacted] & the SF DPH crew - please respond by **9/27** with blocks of dates during which Epic can come shadow either at The General or other locations in the network to understand how we collect SO/GI and pain-points in that process. I know this is an active effort on our parts right now to optimize collection, so this is a great opportunity.

Epic folks - I'm assuming we are targeting before the end of the calendar year, but please let us know if there are more specific windows of time you'd be available, and we can hone availability based on that.

Thanks,

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

visit on the calendar.

Thanks,

Maddie

This Message Is From an External Sender
This message came from outside your organization.

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

@[redacted] - I did discuss this with [redacted] and [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

[redacted] she/her (?)

Subject: Epic immersion at UCSF / SFDPH

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

This Message Is From an External Sender
This message came from outside your organization.

Good morning Dr. Rosenthal,

Happy Monday! My name is [redacted] and I am the Policy Communications Coordinator at Whitman-Walker Institute. I'm reaching out to you because I am contacting providers who specialize in gender-affirming care for youth. There are two projects I'm working on that I would greatly appreciate your support and involvement with!

1. **There is just one week left to comment on HHS' proposed 1557 rule** implementing the Health Care Rights Law of the ACA. Part of this rule will include explicit anti-discrimination protections for LGBTQI communities. We have prepared a writing guide that contains tips and prompts for commenting. **Please submit a comment here (comments can be made anonymously) and share this opportunity widely with your networks!** Your voice as a provider is critical to convey a strong message of support for these protections.

2. As I'm sure you're aware, there is rampant misinformation about gender-affirming care and many statewide attacks on access to this vital care. Because of this, I am working closely with our communications firm to form a network of providers who can engage with the public about issues affecting transgender youth. **If you are interested in engaging with the media (writing and/or speaking), please email me the following (or use this form) by Friday, September 30.**

    - How you prefer your name to appear in print
    - Pronouns
    - Title and affiliation
    - Two to three sentence biography, including your expertise in LGBTQI health
    - Whether you are interested in writing (e.g. opinion pieces), speaking with the press, or both

Thank you in advance for your time and participation. Please don't hesitate to reach out to me if you have any questions!

Good morning Dr. Rosenthal,

Happy Monday! My name is [redacted] and I am the Policy Communications Coordinator at Whitman-Walker Institute. I'm reaching out to you because I am contacting providers who specialize in gender-affirming care for youth. There are two projects I'm working on that I would greatly appreciate your support and involvement with!

1. **There is just one week left to comment on HHS' proposed 1557 rule** implementing the Health Care Rights Law of the ACA. Part of this rule will include explicit anti-discrimination protections for LGBTQI communities. We have prepared a writing guide that contains tips and prompts for commenting. **Please submit a comment here (comments can be made anonymously) and share this opportunity widely with your networks!** Your voice as a provider is critical to convey a strong message of support for these protections.

2. As I'm sure you're aware, there is rampant misinformation about gender-affirming care and many statewide attacks on access to this vital care. Because of this, I am working closely with our communications firm to form a network of providers who can engage with the public about issues affecting transgender youth. **If you are interested in engaging with the media (writing and/or speaking), please email me the following (or use this form) by Friday, September 30.**

    - How you prefer your name to appear in print
    - Pronouns
    - Title and affiliation
    - Two to three sentence biography, including your expertise in LGBTQI health
    - Whether you are interested in writing (e.g. opinion pieces), speaking with the press, or both

Thank you in advance for your time and participation. Please don't hesitate to reach out to me if you have any questions!

Warmly,
[redacted]

Dear Dr. [redacted]

We would like to know if there is an opportunity for [redacted] to attend as an observer in the gender diversity unit led by Dr Steve Rosenthal, between March - May 2023?

[redacted] is finishing his training in pediatric endocrinology at our university and will be in charge of trans children in [redacted]

Thank you very much in advance.

Dear [redacted],

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted], in [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and [redacted], who can provide additional information.

Best wishes,

Steve

Dear Steve,

I want to introduce you to our resident [redacted]

[redacted] wants to rotate with your gender-diverse care team.

[redacted] is in charge of the care of a large population of transgender children and adolescents in [redacted].

We would be very grateful if he could rotate in your service as an "observer physician" during March, April and May 2023.

Please, if it is possible, Are you so kind to tell us how to proceed?

A big hug [redacted]

Subject: RE: Supporting LGBTQI Rights in Healthcare

This Message Is From an External Sender
This message came from outside your organization.

Hi Steve,

Thank you for your reply, and I can certainly understand your position given the current landscape. We are working with our communications firm to make clear to reporters that some providers will need to remain anonymous or use a pseudonym. If this appeals to you and any other UCSF CAGC faculty in the future, please let me know.

Secondly, I'm leading an initiative to form a coalition of health care organizations that provide gender-affirming care to youth. The goal is to have this coalition engage with the public about issues affecting transgender youth and provide expert medical opinions to combat the rampant misinformation we are seeing across the country. I also hope this can be a (virtual) space where pediatric gender clinics can express the challenges they are facing and share resources to support each other. Do you think UCSF CAGC would be interested in joining this coalition?

Thank you again for all that you do, and hope to stay in touch!

Warmly,
[redacted]

CAUTION: This message originated outside the organization. Please be cautious of the contents.

Hi [redacted],

We really appreciate the work you are doing, but until the current landscape calms down a bit, UCSF CAGC faculty have been advised to leave media commentary to national association groups like the Children's Hospital Association and the American Academy of Pediatrics. Please do keep us in mind for the future, however, as we are supportive of, and grateful for, your work and mission.

Thanks very much,

Steve Rosenthal

This Message Is From an External Sender
This message came from outside your organization.

Good morning Dr. Rosenthal,

Happy Monday! My name is [redacted] and I am the Policy Communications Coordinator at Whitman-Walker Institute. I'm reaching out to you because I am contacting providers who specialize in gender-affirming care for youth. There are two projects I'm working on that I would greatly appreciate your support and involvement with!

1. **There is just one week left to comment on HHS' proposed 1557 rule** implementing the Health Care Rights Law of the ACA. Part of this rule will include explicit anti-discrimination protections for LGBTQI communities. We have prepared a writing guide that contains tips and prompts for commenting. **Please submit a comment here (comments can be made anonymously) and share this opportunity widely with your networks!** Your voice as a provider is critical to convey a strong message of support for these protections.

2. As I'm sure you're aware, there is rampant misinformation about gender-affirming care and many statewide attacks on access to this vital care. Because of this, I am working closely with our communications firm to form a network of providers who can engage with the public about issues affecting transgender youth. **If you are interested in engaging with the media (writing and/or speaking), please email me the following (or use this form) by Friday, September 30.**

    - How you prefer your name to appear in print
    - Pronouns
    - Title and affiliation
    - Two to three sentence biography, including your expertise in LGBTQI health
    - Whether you are interested in writing (e.g. opinion pieces), speaking with the press, or both

Thank you in advance for your time and participation. Please don't hesitate to reach out to me if you have any questions!

Warmly,
[redacted]

Pink & Blue: Traversing the Joys and Sorrows of Living in a Gendered World

Pink & Blue is a short film directed by AfroFil Am Non-Binary Queer filmmaker Carmen LoBue (they/them) and Written & Produced by 1st Gen Nigerian Trans Genderqueer lead actor Kaydx (they/he/ẹmi), about the joys and sorrows of first-time parenting for a Trans couple of color. In the film, After a surprise first-time pregnancy, a Trans couple of color wrestles with how the new baby will affect their relationship and how to raise their child in a binary world. In this workshop we will watch the film and create an open conversation around the themes of the fim: gender as construct, community, living in a gendered society and more.

Bottom Surgery - Phalloplasty Info Session

This presentation will cover the surgical journey of a young patient as they navigate towards the goal of aligning their bodies with their identity in the form of phalloplasty. It informs the patient and family/allies through various phases from online research, picking the right surgical team, preparing for the consultation as well as a description of the specific surgical approach that Dr. Ley performs. This is followed by a detailed description of the surgical procedure and an extensive dive into post operative care and long term expectations.

Subject: Oct 6 - IHPS 50th Anniversary Symposium

Hello friends,

For those who are interested, IHPS is hosting a health policy symposium on 10/6 930am-3pm, including two featured talks on:

- "How Government Uses Research to Craft Policy" and
- "Health Journalists and Using Research to Communicate Health Policy"

It's likely going to be a day chock-full of interesting learnings and connections here and there, so wanted to let all of you know about it! Plus, there's free lunch! See below for more and to register!

Very best,
[redacted]

The Philip R. Lee Institute for Health Policy Studies invites you to celebrate a half-century of pushing the traditional boundaries of academia and health studies.

Please RSVP below at your earliest convenience as space is limited.
(Lunch provided)

Agenda:

Opening Remarks: Talmadge King, MD, Dean, UCSF School of Medicine

Video Remarks: Admiral Rachel Levine, MD, Assistant Secretary for Health, US Department of Health and Human Services

"How Government Uses Research to Craft Policy": Panel discussion with state and local government officials discussing the importance of evidence-based research in policy-making for health and healthcare.

Moderator: Peter V. Lee, former CEO Covered California
Panelists:

- Scott Wiener, California State Senator, District 11
- Alice Hm Chen, Chief Medical Officer, Covered California

Celebration of the Harold S. Luft Mentoring Award Winners:

- 2020, Mary Whooley, MD
- 2021, Pamela Ling, MD
- 2022, Urmimala Sarkar, MD

"Health Journalists and Using Research to Communicate Health Policy":Panel discussion with national and local health journalists discussing the importance of communicating policy-focused research to advance equity in health and health care.

Moderator: David Rousseau (Kaiser Health News publisher)

- Ana Ibarra, CalMatters
- Dan Diamond, The Washington Post
- Joanne Kenan, formerly Politico, currently Johns Hopkins School Public Health Commonwealth Fund Journalist in Residence

Poster Session: Exploring current work in the IHPS 12 core focus areas below

- Access to Care & Insurance
- Aging & Long-term Care
- Adolescent & Children's Health
- Gender & Reproductive Health
- Healthcare Value & Economics
- Healthcare Workforce & Education
- Health Equity
- Industry Influences on Health
- Informatics & Digital Health
- Patient Experience & Quality of Care
- Social & Environmental Determinants of Health
- Substance Use & Mental Health

Dear [redacted]

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted], in [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and

Dear Steve,

I want to introduce you to our resident [redacted]

[redacted] wants to rotate with your gender-diverse care team.

[redacted] is in charge of the care of a large population of transgender children and adolescents in [redacted].

We would be very grateful if he could rotate in your service as an "observer physician" during March, April and May 2023.

Please, if it is possible, Are you so kind to tell us how to proceed?

Hi [redacted],

I wanted to be sure you saw the message that I just received from [redacted]. I'm sorry that as of now, UCSF is still not accepting international observerships due to COVID restrictions. I would recommend inquiring again at the beginning of 2023.

[redacted]:
Is there the possibility for [redacted] to observe remotely, via Telehealth? We anticipate that we will likely still have some of our Child and Adolescent Gender Center (CAGC) clinics by Telehealth (Tuesday afternoons starting at Noon, Pacific Time) in the March-May, 2023 time-frame. I'm not sure if this would be of interest, but just wanted to suggest this possibility.

Thanks,

Steve

Hey [redacted] & [redacted]:

You may both already know Dr. Rosenthal (cc'd) who directs the UCSF Child & Adolescent Gender Center (which I recently joined)! He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

Dear Steve, thank you very much

Yes, we had a kind answer from [redacted] several months ago. We would just like to see if you were reconsidered without COVID restriction, by 2023
I am going to talk with [redacted] about the chance to do telemedicine with you. Is a great possibility for me too!

Moreover, if you could invite us to any education talk (o line) could be great!

Are you travelling to Buenos Aires in March?
Thank you very much to all your group for the support!

Also, I am sending a small study about quality of life in chilean children with gender diversity

regards!

Subject: Re: [redacted] -- observer physician

Dear [redacted],

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted], in [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and [redacted], who can provide additional information.

Best wishes,

Steve

Dear Steve,

I want to introduce you to our resident [redacted]

[redacted] wants to rotate with your gender-diverse care team.

[redacted] is in charge of the care of a large population of transgender children and adolescents in [redacted].

We would be very grateful if he could rotate in your service as an "observer physician" during March, April and May 2023.

Please, if it is possible, Are you so kind to tell us how to proceed?

A big hug [redacted]

Thanks for looping me in here, [redacted]-- and Dr. Rosenthal, it's great to be connected again, although I wish it were in better circumstances!

We'd love to be included on the call to learn more about what contact you've had with the Times reporters -- I'm not able to join at 5, but [redacted] should be able to hop on with you!

Hey [redacted]

You may both already know Dr. Rosenthal (cc'd) who directs the UCSF Child & Adolescent Gender Center (which I recently joined)! He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

Hi Everyone,
I checked with our GME office and telehealth /remote observation require GME approval if the observation is more than 3 days, and currently they are not allowing that for international observers. Hopefully by 2023 all restrictions will be lifted!

Thanks,

Dear Steve, thank you very much

Yes, we had a kind answer from [redacted], several months ago. We would just like to see if you were reconsidered without COVID restriction, by 2023
I am going to talk with [redacted] about the chance to do telemedicine with you. Is a great possibility for me too!

Moreover, if you could invite us to any education talk (o line) could be great!

Are you travelling to Buenos Aires in March?
Thank you very much to all your group for the support!

Also, I am sending a small study about quality of life in chilean children with gender diversity

regards!

> Is there the possibility for [redacted] to observe remotely, via Telehealth? We anticipate that we will likely still have some of our Child and Adolescent Gender Center (CAGC) clinics by Telehealth (Tuesday afternoons starting at Noon, Pacific Time) in the March-May, 2023 time-frame. I'm not sure if this would be of interest, but just wanted to suggest this possibility.

Dear Steve,

I want to introduce you to our resident [redacted]

[redacted] wants to rotate with your gender-diverse care team.

[redacted] is in charge of the care of a large population of transgender children and adolescents in [redacted].

We would be very grateful if he could rotate in your service as an "observer physician" during March, April and May 2023.

Please, if it is possible, Are you so kind to tell us how to proceed?

A big hug [redacted]

09/27/2022 CAGC Staff Meeting Minutes

1) [redacted] study - [redacted]
   a) [redacted]
   b) [redacted]
   c) [redacted]
2) CAGC Personnel updates –
   a) [redacted] (ped endo) leaving East Bay CAGC, effective now – no longer seeing new patients and will work with [redacted] to ensure warm hand-off of existing patients
   b) [redacted] (Tue/Wed PM) & [redacted] (child & adol psych) (Tue PM) joining West Bay CAGC for new intake visits, templates open and hoping to fill
   c) Practice Coordinator 2 in SF has accepted (per [redacted] will in Oct 2022) – coming from UCSF inpatient setting, will need some onboarding time for ambulatory setting
   d) Other updates:
      i) NP hires still need to be presented by [redacted], will try for the next meeting.
      ii) Psychology hire – no updates.
      iii) SW hire – [redacted] hopefully official soon, other position no update.
      iv) Ped Endo faculty hire – no new updates.
      v) [redacted] and [redacted] will come back as consultants, a few hours/week
3) Psychopharm visits now available! - [redacted] (Tue/Wed PM) & [redacted] (Tue PM)
   a) Place Psych referral and use the smarphrase .GENDERPHARMREFER so it will be routed to [redacted] for scheduling, patients should have a therapist in place already given limited time during med management visits, no current capacity for LOS but maybe in the future
      i) [redacted] can see SF Medi-Cal patients, will investigate if this can be expanded to other Medi-Cal patients (Alameda requested)
      ii) [redacted] can see non SF Medi-Cal patients
4) Workflow w/LOS review now that [redacted] and [redacted] have joined?
   a) [redacted] and [redacted] will work with [redacted] [redacted] to start reviewing letters
   b) Turnaround time for review is 1-2 weeks
   c) Will update [redacted] regarding new workflow
5) CAGC capacity issues and adult transition program
   a) As of 07/31/2022 – West Bay CAGC has 902 active patients, 323 (36%) are 18+ years old
   b) Large burden of adult patients are falling on [redacted] and impacting her schedule availability – using E-Visits and on-demand telephone encounters to try and accommodate for now
   c) The UCSF GAHP now has a new provider [redacted] (they/them) – can get patients in within 2-3 months
   d) Request for ALL CAGC providers to transition young adult patients who are on stable GAHT regimens – everyone needs to do their part and we have the opportunity right now w/increased capacity at the UCSF GAHP
   e) Plan to utilize new PC2 to help with screening new patients who are 18 yrs old or nearly 18 yrs old and route to UCSF GAHP if more appropriate
6) Security concerns
   a) [redacted] (Vice Chair of Operations at BCH) and [redacted] (Executive Director of Strategic Communications, cell [redacted]) along with UCPD and UCSF PD lieutenants joined the Peds Endo Division meeting on Friday, 09/23 to provide updates

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

and their personal contact information if any concerns arise – expressed strong support and commitment to our CAGC program
   i) West Bay - UCSF PD Lt [redacted] - [redacted]@ucsf.edu, cell [redacted]
   ii) East Bay - UCPD Lt [redacted] - [redacted]@ucsf.edu, cell [redacted]
b) Scripting has been drafted and will be shared with front line staff (front desk, LVN, RN, SW, etc) when finalized
c) Crisis planning in process.
d) Website updates:
   i) Hours and addresses no longer on the website
   ii) Discussion of whether providers want to be removed or stay on the website – agreement that we should have a consensus
   iii) [redacted] to consult w/expert in the field
   iv) Suggestion to make all personal logins require two-factor authentication (personal e-mail, social media accounts, etc)

7) Updates on move to Pritzker Building – still pending, Steve will check in with [redacted]

8) Save the Date: CAGC 10 year anniversary celebration on 10/29/2022 brunch/lunch
   a) [redacted] will e-mail [redacted] about reserving Pritzker Building rooftop for venue
   b) Alternate location will be [redacted]'s backyard in [redacted]

9) SOC8 out! – not discussed today, but something to review in the future

Dear [redacted]

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted], in [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and [redacted], who can provide additional information.

Best wishes,

Steve

Dear Steve,

I want to introduce you to our resident [redacted]

[redacted] wants to rotate with your gender-diverse care team.

[redacted] is in charge of the care of a large population of transgender children and adolescents in [redacted].

We would be very grateful if he could rotate in your service as an "observer physician" during March, April and May 2023.

Please, if it is possible, Are you so kind to tell us how to proceed?

A big hug [redacted]

Hey [redacted]:

You may both already know Dr. Rosenthal (cc'd) who directs the UCSF Child & Adolescent Gender Center (which I recently joined)! He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

Hi Dr. Rosenthal -- thank you for the call yesterday! I appreciate that you were able to take the time to explain everything to [redacted] and I.

[redacted] and I connected afterwards and had heard that your hospital comms team was also working on a plan. Would it be possible to connect us with them? Just so we can make sure we're all aligned!

Thank you,
[redacted]

Thanks for looping me in here, [redacted] -- and Dr. Rosenthal, it's great to be connected again, although I wish it were in better circumstances!

We'd love to be included on the call to learn more about what contact you've had with the Times reporters -- I'm not able to join at 5, but [redacted] or [redacted] should be able to hop on with you!

Hi [redacted],

I have cc'd [redacted] is Senior Public Information Representative for the UCSF Office of Communications.

[redacted],
I happened to mention to [redacted] a couple of days ago about concerns with particular NYT reporters related to bone studies from our 4—site NIH grant. He suggested I speak with representatives from HRC and GLAAD, and that zoom call took place yesterday with [redacted] from GLAAD and [redacted] from HRC. I found it to be a helpful and informative discussion.

Thanks,

Steve

Subject: CAGC Faculty Update

Hi [redacted],

Shana Tovah to you and your family!

Do you have any updates re CAGC faculty? Has [redacted] officially accepted (independent of the offer letter)? From what I understand, the offer letter is still being worked on to include [redacted] time in the adult transgender clinic. Also, given that [redacted] will soon no longer be seeing patients at the Oakland-CAGC, does this strengthen our case for hiring an additional pediatric endocrinologist—e.g. [redacted]? Has there been any f/u communication with [redacted] from [redacted] as Search Committee Chair?

We have our monthly CAGC Staff Meeting today at 5:15 PM, and I'd like to update the team on the status of faculty recruitment—in particular, if I can say anything about [redacted].

Thanks and best wishes,

Steve

Hi team. Sorry for the delay

I am working on the proforma together with our DA [redacted] to justify hiring [redacted] in addition to [redacted] and I have a formal in person meeting with Dr. [redacted] scheduled for Monday Oct 10th to ask him –
Can you send me the comments from the members of the committee that reviewed her application, a copy of her CV and her cover letter for the position so I can send them to him ahead of time? I think it is buried in my email if I have it

Thanks!!!!

I am working on the finalized offer letter for [redacted] right now the hold up is with the chair's office with regard to the additional asks that [redacted] had (downpayment for her home, clinics in adult gender center)– I have let her know that we are working on it.

And yes we should be able to hire [redacted]- I am working on the justification for the clinical support with [redacted] stepping down in that role and I have a meeting with [redacted] on person on October 10th to officially make the ask- [redacted] knows that I am working on it!
I would like to meet with [redacted] at our scheduled meeting to make the ask in person – he is just coming back from vacation and is out for the Jewish holidays as well so its hard to catch him.
I am fairly certain he will say yes though!

Subject: CAGC Faculty Update

Hi [redacted],

Shana Tovah to you and your family!

Do you have any updates re CAGC faculty? Has [redacted] officially accepted (independent of the offer letter)? From what I understand, the offer letter is still being worked on to include [redacted] time in the adult transgender clinic. Also, given that [redacted] will soon no longer be seeing patients at the Oakland-CAGC, does this strengthen our case for hiring an additional pediatric endocrinologist—e.g. [redacted]? Has there been any f/u communication with [redacted] from [redacted] as Search Committee Chair?

We have our monthly CAGC Staff Meeting today at 5:15 PM, and I'd like to update the team on the status of faculty recruitment—in particular, if I can say anything about [redacted].

Thanks and best wishes,

Steve

Hey [redacted] & [redacted]

You may both already know Dr. Rosenthal (cc'd) who directs the UCSF Child & Adolescent Gender Center (which I recently joined)! He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

Subject: Re: Search Committee decision

Thanks for the update [redacted].

Any word from Dr. [redacted] if we can make a second offer?

I have not heard from [redacted], but I had told her that I would likely let her know by the end of August, which has passed. She may contact me and at some point, I would like to reach out to her to let her know that we are still interested in her as well.

Thanks for your help,
[redacted]

Subject: Happy Hour and/or Dinner on Thursday Night

Hello everyone!

Would folks like to get together for happy hour and/or dinner on Thursday evening after our meeting? There's a Japanese restaurant with a good happy hour very close to our building.

Also, is everyone staying at The Line Hotel? If so, it is definitely walking distance to our new building, and there are also lots of restaurants around it.

For lunch on Thursday, we'll order via a food delivery service from somewhere local and cover the cost of lunch.

[redacted]. I'm sure we'll be noisy enough for you to quickly find us.

They'll be a few documents that [redacted] will be sending out early next week (e.g., agenda, retention data, etc.)

Thanks,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is 69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Obtained via CPRA by Judicial Watch, Inc.

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical

Subject: Re: CSW II/III Job Description

Hi [redacted], Steve and [redacted],

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is 69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR

Hi team. Sorry for the delay

I am working on the proforma together with our DA [redacted] to justify hiring [redacted] in addition to [redacted] and I have a formal in person meeting with Dr. [redacted] scheduled for Monday Oct 10th to ask him –
Can you send me the comments from the members of the committee that reviewed her application, a copy of her CV and her cover letter for the position so I can send them to him ahead of time? I think it is buried in my email if I have it

Thanks!!!!

[redacted]

Cc: [redacted] <[redacted]@ucsf.edu>
Subject: Re: Search Committee decision

Thanks for the update [redacted].

Any word from Dr. [redacted] if we can make a second offer?

I have not heard from [redacted], but I had told her that I would likely let her know by the end of August, which has passed. She may contact me and at some point, I would like to reach out to her to let her know that we are still interested in her as well.

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is 69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]'s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Hi [redacted], Steve and [redacted]

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]'s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers,

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hey [redacted],

You may both already know Dr. Rosenthal (cc'd) who directs the UCSF Child & Adolescent Gender Center (which I recently joined)! He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

Subject: Thank you! Submit your announcements

Dear Colleagues,

Thank you for attending the department meeting today. The slides from the meeting are attached here.

We heard an update from [redacted], Division Chief of Pediatric Endocrinology. Don't miss her update! Watch the recording **here**.

New Process

We are implementing a new process for collecting department announcements. Please submit your announcements using **this short, 4-question form**. Note that you may have to login with your UCSF credentials.

We kindly ask that all announcements are sent through the form by the end of the week, Friday, Sept. 23.

What kind of announcements should I submit?

- **Recognition**
- **Shout-outs**
- **Clinical achievements**
- **Awards**
- **Publications**
- **Media mentions**

Please be sure that your form submission contains a concise description of the announcement and any relevant information (URLs, images, etc.).

Please note that items may be edited for clarity and style. Additionally, while some announcements may not be highlighted in the department meeting, they may be promoted on social, on our blog, or newsletter.

Thank you,

Hi all,
What if we targeted late January / early February?
That way [redacted] would (hopefully) be able to attend, and that would give us all time to ensure folks are available. [redacted]) - do you have any restrictions during that time? I was hoping to secure a time when you would be available to talk through some of the build issues we've encountered.
Thanks,
[redacted]

Good Morning,

Thanks for the updates.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

External Mail

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Adding in [redacted] from UCSF, we'll want to make sure someone from his team is included in the preparation for this visit.

@[redacted] – I did discuss this with [redacted] a few months back and they said after the Marin go live would be fine.

I think the next steps would be to schedule some time with IT and Operational leads to further refine the agendas [redacted] sent over.

Circling back to this, post UGM. 😊

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Subject: WPATH SOC8 changes, social work flow, discharge planning

Hello all,

WPATH SOC8 is out and no longer requires a mental health "letter". So we can now focus on patient-centered assessments. A single "letter" is provided by any qualified provider to attest to the patient's need for and appropriateness for surgery. In general, this letter should be able to come from the treating surgeon. Our new social worker, [redacted]'s focus will be on perioperative assessment and support, rather than formal gender dysphoria assessments and letter writing.

Please change your workflows accordingly. It remains to be seen how insurance companies will respond to these changes, but we should begin following SOC8 and then sort out insurance issues as they arise.

Please begin referring all of your surgical patients (once they have decided to pursue surgery here) to REF452 Transgender Care Social Work, so that [redacted] can outreach and assess for needs.

Also, [redacted] and I have been working on 2 initiatives:

1. We would like [redacted] to work directly with discharge planning, when appropriate, to assist with postop needs, for example, finding a trans-affirming SNF, making sure IHSS workers are trans-inclusive, making sure social supports actually show up etc.... Can you please each provide the contact for your discharge planning teams? Ideally, [redacted] will be able to shadow these teams to better understand their flow.

2. [redacted] would like to observe surgical cases, to become more familiar with the procedures and after-care needs. Are any of you able to host her for OR cases? Ideally, she will follow the patient from pre-op to PACU, and to the floor if an in-patient case.

3. Once up and running, [redacted] will round on inpatients with high psychosocial needs. We will work out a mechanism for this.

Thank you for all you do.

Maddie

Subject: Surgery observing, assessments, other things

Hi there. I know we'd discussed your interest in shadowing surgeons. For some reason they have been a little dodgy about shadowing lately. I'm not sure what is going on. Right now I am working on trying to get [redacted] into the OR as much as possible as a priority. Once that is sorted, let's revisit our efforts to get you in too.

Also, when we met last week, we ran out of time - which is a good thing, having so many good topics to discuss - but when I had asked you about knowing about surgery referrals, I meant more the actual mechanics now that [redacted] is here, and also how we are going to deal with the updates in SOC8, which is evolving. Perhaps we can put this on our agenda for this week.

Lastly, I'd like to take you to lunch or dinner. This could be lunch during work hours or dinner on a Monday evening if that works for you. With some advance planning, I could come meet you at Lakeshore for lunch if that works better. Please let me know.

Cheers,

Maddie

Hi [redacted]very nice to meet you and [redacted]. Thank you Steve for the intro and for the call last night.

Here are my available windows next week:
Tuesday 1:30-3:30 ET /10:30-12:30 PT
Wednesday 12:30p-2:30p ET/9:30-11:30a PT

I have smaller pockets of time on Thursday late morning or later afternoon. Just let me know what works for you all.

Thank you and I look forward to catching up next week.

He just mentioned to me that Megan Twohey and Christina Jewett are working on an investigative piece for the NYT about trans youth care (focus unclear – maybe about the four-site NIH-funded research study that looks at gender-affirming medical care for minors). They've been submitting FOIA requests for it and have at times seemed confrontational. Was this on your radar?

From: BCH Office of the President <[redacted]@ucsf.edu> on behalf of [redacted]@ucsf.edu>
Sent: Monday, October 03, 2022 3:30 PM PDT
Subject: Announcement: New CMO for UCSF Benioff Children's Hospitals

Dear Colleagues,

I am pleased to announce that following a nationwide search, [redacted], MD, MBA, FAAP, has been selected to serve as chief medical officer (CMO) for UCSF Benioff Children's Hospitals, a newly created role that will be central to our growth and vision as a cross-bay children's health system. [redacted] will begin this new role October 17, 2022.

A dedicated and experienced physician leader, [redacted] shares BCH's commitment to delivering high-value, patient-centric care with equity and empathy. She has a proven track record strengthening quality of care through patient and clinician engagement and implementing clinical and operational best practices that lead to sustained, measurable results.

In this critical new cross-bay role, [redacted] will oversee clinical activities for BCH Oakland and San Francisco, building upon our institutional commitment to quality and safety, and unifying medical practice standards across our organization. While this new role consolidates our campus specific CMO positions to further align the clinical culture across BCH, plans for site-specific physician leadership will be shared following [redacted]'s arrival.

Reporting directly to me with a dotted line to UCSF Health physician leadership, [redacted] will be responsible for aligning inpatient and outpatient services with the overall mission and vision of UCSF Health, the BCH strategic plan, and the pediatric academic priorities of UCSF. She will work closely with Chief Nursing Officer [redacted], to monitor, manage, and improve clinical operations, and will partner with Chief Clinical Strategy Officer [redacted], MD, PhD, to optimize faculty engagement and patient satisfaction, while supporting our medical directors and other physician leaders.

[redacted] is currently the chief health officer for University Hospitals Health System (UHHS) in Cleveland, OH, the Case Western Reserve University affiliated hospital system, where she leads strategy and operations to improve value and outcomes for 45,000 employee health plan members. In prior roles, [redacted] served as the chief experience officer and the system physician advisor for UHHS, leading provider alignment efforts and chairing system quality review and peer learning programs, to ensure consistent medical standards of care.

A practicing pediatric intensive care physician, [redacted] also works in the Division of Pediatric Critical Care Medicine at Rainbow Babies & Children's Hospital, serves as medical director for the UH Physician Credentialing Verification, and is an assistant professor at Case Western Reserve University School of Medicine. Her expertise in high-value care, clinical transformation, safety, and medical quality has made her a trusted spokesperson for community and national public health issues.

[redacted] holds a Master of Business Administration from Weatherhead School of Management, Case Western Reserve University, and a doctorate in medicine from Case Western Reserve University School of Medicine.

I'd like to thank the members of our search committee, led by [redacted] for their excellent work and dedication, as well as [redacted], MD, and [redacted] for serving as interim CMO for BCH Oakland and CMO for BCH San Francisco, respectively.

With this key appointment, we are building a bright future together and fostering a more unified organizational culture as we continue our journey toward becoming one of the nation's preeminent children's health care providers.

Please join me in extending a warm BCH welcome to [redacted].

Sincerely,

[redacted]

Subject: WPATH SOC8 changes, social work flow, discharge planning

Hello all,

WPATH SOC8 is out and no longer requires a mental health "letter". So we can now focus on patient-centered assessments. A single "letter" is provided by any qualified provider to attest to the patient's need for and appropriateness for surgery. In general, this letter should be able to come from the treating surgeon. Our new social worker, [redacted]'s focus will be on perioperative assessment and support, rather than formal gender dysphoria assessments and letter writing.

Please change your workflows accordingly. It remains to be seen how insurance companies will respond to these changes, but we should begin following SOC8 and then sort out insurance issues as they arise.

Please begin referring all of your surgical patients (once they have decided to pursue surgery here) to REF452 Transgender Care Social Work, so that [redacted] can outreach and assess for needs.

Also, [redacted] and I have been working on 2 initiatives:

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

1. We would like [redacted] to work directly with discharge planning, when appropriate, to assist with postop needs, for example, finding a trans-affirming SNF, making sure IHSS workers are trans-inclusive, making sure social supports actually show up etc.... Can you please each provide the contact for your discharge planning teams? Ideally, [redacted] will be able to shadow these teams to better understand their flow.

2. [redacted] would like to observe surgical cases, to become more familiar with the procedures and after-care needs. Are any of you able to host her for OR cases? Ideally, she will follow the patient from pre-op to PACU, and to the floor if an in-patient case.

3. Once up and running, [redacted] will round on inpatients with high psychosocial needs. We will work out a mechanism for this.

Thank you for all you do.

I'll need to talk to a couple of my managers to verify whether I am cleared for travel during that period of time – I have a client who is beginning their Hyperdrive rollout in late January. They won't roll out to a larger group of users until mid February, so earlier in that window is probably better for me (personally), but I'll need to get confirmation that I'm able to get backup coverage for my other responsibilities.

I'll try to get more clarity on whether or not I'll be able to travel in that window and update the thread. I'll defer to [redacted] on the availability of other Epic folks.

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,

Hello all,

I met with [redacted] this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Hey Maddie,

Hope all is well and that you had a great WPATH conference! I wanted to touch base about slides for the conference next week. Let me know if you have those and if there's anything I can help with. Thanks!

Hello Maddie,

Thanks so much again for all your work and collaboration with us.

I wanted to check in on slides for your upcoming conference presentation. If possible, could you send those to us by this Friday (9/16)? Please let me know.

Thanks so much!

Hello again Maddie,

I hope you're having a wonderful summer so far! Thanks again for confirming the information below.

As I mentioned last month, we'd like to collect your **slides for your presentation** at our Advancing Excellence in Transgender Health conference by **September 9, 2022**.

You can send your slides directly to me via email, dropbox link, google drive link, or any other method that might be easiest. If you have questions, or if there's any way I can be helpful, please let me know.

Thank you again for your participation in the conference, and I look forward to reviewing your slides in one month!

Bio: Maddie Deutsch, MD, MPH is a Professor of Clinical Family & Community Medicine at the University of California - San Francisco, where she is the Medical Director of the UCSF Gender Affirming Health Program. She is the President of the US Professional Association for Transgender Health (USPATH) and the Chapter Lead for Primary Care in the World Professional Association for Transgender Health (WPATH) Standards of Care, 8th Version. Dr. Deutsch has served as PI or Co-I on numerous studies in the field of transgender health. She has authored or co-authored more than 40 peer reviewed publications and numerous textbook chapters.

Headshot attached

Objectives:

1. Recognize key considerations in cancer screening for trans and gender expansive individuals
2. Describe approaches to perioperative hormone management
3. Interpret available data on cardiovascular risk in the context of gender affirming hormone therapy

Hello again,

I've received some clarity around the MyCE login. Since you presented last year, you can visit the website here (https://myce.hms.harvard.edu/portal). You can either login with last year's information (if you recall it), or reset the password and login that way. Everything should be on the portal from there.

Thank you so much!

Dear Dr. Deutsch,

On behalf of myself and the course directors, [redacted], I am writing to invite you to present at the 8th annual "Advancing Excellence in Transgender Health" conference organized by The Fenway Institute as a Harvard Medical School accredited course, to be held October 13, 2022, through October 16, 2022. In order to ensure the health and wellbeing of our participants and speakers, this year we will once again host our conference virtually.

The course will begin with a pre-conference training, from 1pm-6:30pm on Thursday, October 13th, for attendees who would like to access a few basic training sessions before the full three-day conference.

We are hoping you could present on "Primary and Preventative Health Needs for Transgender People" onFriday, October 14th, 2022, from 12:30 PM to1:30 PM (EST). We are happy to help think through how to organize, re-title, and/or structure the session if needed.

Please let us know if you are available and interested in presenting at this year's conference by June 22nd.

Learning objectives and citations for your session will be due in July. Also, as a part of our commitment to equity and economic justice, we are offering a $1,000 honorarium for all presenters. An invoice and W9 will need to be submitted for payment.

I look forward to hearing back from you.

Many thanks in advance and best wishes,

[redacted]

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Subject: Re: [redacted] immersion at UCSF / SFDPH

Hello all,

I met with Will this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.
Thanks!

Cc: [redacted], [redacted] <[redacted]@ucsf.edu>; [redacted], [redacted] <[redacted]@ucsf.edu>
Subject: WPATH SOC8 changes, social work flow, discharge planning

Hello all,

WPATH SOC8 is out and no longer requires a mental health "letter". So we can now focus on patient-centered assessments. A single "letter" is provided by any qualified provider to attest to the patient's need for and appropriateness for surgery. In general, this letter should be able to come from the treating surgeon. Our new social worker, [redacted]'s focus will be on perioperative assessment and support, rather than formal gender dysphoria assessments and letter writing.

Please change your workflows accordingly. It remains to be seen how insurance companies will respond to these changes, but we should begin following SOC8 and then sort out insurance issues as they arise.

Please begin referring all of your surgical patients (once they have decided to pursue surgery here) to REF452 Transgender Care Social Work, so that [redacted] can outreach and assess for needs.

Also, [redacted] and I have been working on 2 initiatives:

1. We would like [redacted] to work directly with discharge planning, when appropriate, to assist with postop needs, for example, finding a trans-affirming SNF, making sure IHSS workers are trans-inclusive, making sure social supports actually show up etc.... Can you please each provide the contact for your discharge planning teams? Ideally, [redacted] will be able to shadow these teams to better understand their flow.

2. [redacted] would like to observe surgical cases, to become more familiar with the procedures and after-care needs. Are any of you able to host her for OR cases? Ideally, she will follow the patient from pre-op to PACU, and to the floor if an in-patient case.

3. Once up and running, [redacted] will round on inpatients with high psychosocial needs. We will work out a mechanism for this.

Thank you for all you do.

Maddie

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and SFDPH.

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,

Subject: RE: Epic immersion at UCSF / SFDPH

Circling back to this, post UGM. 😊

As [redacted] mentioned, we're planning an immersion trip at **UCSF** that will include shadowing at Maddie's clinic on a **Wednesday afternoon** and then to potentially a provider at the Child & Adolescent Gender Center on **either Tuesday or Thursday**.

It's our hope to be able to combine this visit with an immersion at **SFDPH** as well. '
What we need to know:

- which clinics/areas/providers are available for shadowing?
- are SOGI stakeholders we could meet with outside of shadowing, and what days work best?

I'm attaching a real tentative customer itinerary for an idea of what we're looking for and the SGN Immersion agenda template that I'll finalize once we've nailed down specifics.

At Epic, it's our goal to have this trip completed before the end of 2022, ideally between the months of Oct-Dec, so that the trip isn't short notice.

We appreciate your cooperation and support to make this trip happen and hope to hear for you soon.

Thanks,

External Mail

Hi everyone,
This is in follow-up to my prior emails about an immersive experience where members of Epic can shadow at UCSF & SFDPH and understand how we collect SO/GI as well as discuss what is going well and ongoing pain points.
I wanted to connect us all together on a single email chain to finalize dates since it will be over multiple sites and multiple dates.
There are plans for Epic to visit Maddie's clinic at UCSF on a Wednesday afternoon, and then potentially shadow a provider at the Child & Adolescent Gender Center on either Tuesday or Thursday.
On the SFDPH side, I know we had talked about a visit to a primary care location and not sure if we also want to include an experience shadowing inpatient registration since that its own unique workflows we are currently trying to optimize.
For those interested in hosting, please respond to this email with potential blocks of dates that would work well so we can coordinate timing, and please feel free to add anyone I inadvertently missed on this email.

Good Morning,

Thanks for the updates.

From SFDPH/SFHN primary care, we would recommend spending some time with Castro Mission Health Center, which is a community primary care location. We are relatively flexible. Would also not recommend a holiday week, but otherwise, no significant date restrictions. We can be flexible on the day/time of week so can see depending on the week what may work best with other schedule restrictions.

We can consider additional clinics as well if there is interest in a campus-based clinic at ZSFG or other locations.

Best,
[redacted]

Great, thanks [redacted] for describing the landscape, and others for replies. Let's please agree that 9/27 is the deadline for interested entities to provide time blocks. Anyone not providing a time block by then will have to wait and see what the finalized block is and then fit in accordingly.

Other than holiday weeks, and regarding the Gender Affirming Health Program at Montgomery St, I do not have any full weeks where I will not have at least one day of availability looking ahead into the Spring.

Best,

Maddie

Just adding some additional information from the Epic side:

We have a number of immersion trips planned for some other organizations before the end of the year. If we would like to get this scheduled before the end of the year, we could probably make that happen but [redacted] and I may not be included in the group of folks Epic is able to send due to other conflicts (other Epic development responsibilities, additional immersion trips). So we COULD still do before the end of the year, but other folks

If we started looking towards the beginning of next year, there might be some more flexibility in who is able to attend ([redacted] and myself might be able to attend), but ultimately, we can adjust based on what works best for UCSF and [redacted]

Good Morning,

I'm in process of identifying some potential locations from Primary Care. There may be a preference to consider a smaller off-campus/community clinic rather than on-campus.

If there is a strong preference for an on-campus clinic at the General, we can certainly include that as well.

Just to confirm, we are looking for one primary care site?

Regardless, we have multiple clinics that would be great for this type of visit so regardless of the week, I am certain we can have a primary care site participate.

Best,

Hello all,

I met with Will this week at the WPATH conference. We need to get on this right away. In the months that have passed since we began discussing this with EpIC, they have used their "slot" for a trip out west with a scheduled visit at Stanford, where they will be spending a week. We may have missed the boat for this year and need to act right away to get something on the schedule. EpIC folks, I will host you any time on a Tues (telemed only), Wed, or Fri in my clinic. Others, please weigh in. Let's set a deadline of 9/27 for UCSF/SFDPH people to respond to availability so we can get this crucial visit on the calendar.

Thanks,

Maddie

Subject: EpIC immersion

Hi there - quick note. I met with [redacted] from Epic when I was WPATH. He was very eager to find a time to meet with me. I was really busy with many roles at the conference and I carved out some time for him. It was SO awkward! He did not ask me a single question! He spent the whole time rambling about what he does and all kinds of tangents, non-sequiturs, and dense tech talk. I repeatedly asked him if he had any questions for me and he just would say "no" and then ramble on! After about 15 minutes, I basically told him I needed to go do something else. He followed me to the elevator still talking about who knows what, and kept talking while the elevator door closed.

TL;DR, I wonder if this EpIC visit will be useful or if it will be more of a "check the box" for them.

Subject: Re: EpIC immersion

I'm looking at it more from what we might gain (I don't really care if they get anything out of it). I figure this is an opportunity to highlight the pain points we've experienced and see if they either have a suggestion for how to fix it based on other institutions or if they can go back to Epic and make a fix for it. Hopefully it won't be a total waste of time!

Subject: EpIC immersion

Hi there - quick note. I met with [redacted] from Epic when I was WPATH. He was very eager to find a time to meet with me. I was really busy with many roles at the conference and I carved out some time for him. It was SO awkward! He did not ask me a single question! He spent the whole time rambling about what he does and all kinds of tangents, non-sequiturs, and dense tech talk. I repeatedly asked him if he had any questions for me and he just would say "no" and then ramble on! After about 15 minutes, I basically told him I needed to go do something else. He followed me to the elevator still talking about who knows what, and kept talking while the elevator door closed.

TL;DR, I wonder if this EpIC visit will be useful or if it will be more of a "check the box" for them.

Yes agreed. Mostly I'm remarking because [redacted] had mentioned he may not be able to make it, and maybe we can steer it in that direction. My meeting with him was a 100% total waste of time.

Cc: [redacted]@ucsf.edu>; [redacted]@ucsf.edu>
Subject: WPATH SOC8 changes, social work flow, discharge planning

Hello all,

WPATH SOC8 is out and no longer requires a mental health "letter". So we can now focus on patient-centered assessments. A single "letter" is provided by any qualified provider to attest to the patient's need for and appropriateness for surgery. In general, this letter should be able to come from the treating surgeon. Our new social worker, [redacted] [redacted]s focus will be on perioperative assessment and support, rather than formal gender dysphoria assessments and letter writing.

Please change your workflows accordingly. It remains to be seen how insurance companies will respond to these changes, but we should begin following SOC8 and then sort out insurance issues as they arise.

Please begin referring all of your surgical patients (once they have decided to pursue surgery here) to REF452 Transgender Care Social Work, so that [redacted] can outreach and assess for needs.

Also, [redacted] and I have been working on 2 initiatives:

1. We would like [redacted] to work directly with discharge planning, when appropriate, to assist with postop needs, for example, finding a trans-affirming SNF, making sure IHSS workers are trans-inclusive, making sure social supports actually show up etc.... Can you please each provide the contact for your discharge planning teams? Ideally, [redacted] will be able to shadow these teams to better understand their flow.

2. [redacted] would like to observe surgical cases, to become more familiar with the procedures and after-care needs. Are any of you able to host her for OR cases? Ideally, she will follow the patient from pre-op to PACU, and to the floor if an in-patient case.

3. Once up and running, [redacted] will round on inpatients with high psychosocial needs. We will work out a mechanism for this.

Thank you for all you do.

Maddie

Hello! Sorry for the delay. Please see below and attached.

Best,

Maddie

Bio: Maddie Deutsch, MD, MPH is a Professor of Clinical Family & Community Medicine at the University of California - San Francisco, where she is the Medical Director of the UCSF Gender Affirming Health Program. She is the President of the US Professional Association for Transgender Health (USPATH) and the Chapter Lead for Primary Care in the World Professional Association for Transgender Health (WPATH) Standards of Care, 8th Version. Dr. Deutsch has served as PI or Co-I on numerous studies in the field of transgender health. She has authored or co-authored more than 40 peer reviewed publications and numerous textbook chapters.

Headshot attached

Objectives:

1. Recognize key considerations in cancer screening for trans and gender expansive individuals
2. Describe approaches to perioperative hormone management
3. Interpret available data on cardiovascular risk in the context of gender affirming hormone therapy

Hello again,

I've received some clarity around the MyCE login. Since you presented last year, you can visit the website here (https://myce.hms.harvard.edu/portal). You can either login with last year's information (if you recall it), or reset the password and login that way. Everything should be on the portal from there.

Thank you so much!

Dear Dr. Deutsch,

On behalf of myself and the course directors, [redacted], [redacted], and [redacted] PA-C, I am writing to invite you to present at the 8th annual "Advancing Excellence in Transgender Health" conference organized by The Fenway Institute as a Harvard Medical School accredited course, to be held October 13, 2022, through October 16, 2022. In order to ensure the health and wellbeing of our participants and speakers, this year we will once again host our conference virtually.

The course will begin with a pre-conference training, from 1pm-6:30pm on Thursday, October 13th, for attendees who would like to access a few basic training sessions before the full three-day conference.

We are hoping you could present on "Primary and Preventative Health Needs for Transgender People" onFriday, October 14th, 2022, from 12:30 PM to1:30 PM (EST). We are happy to help think through how to organize, re-title, and/or structure the session if needed.

Please let us know if you are available and interested in presenting at this year's conference by June 22nd.

Learning objectives and citations for your session will be due in July. Also, as a part of our commitment to equity and economic justice, we are offering a $1,000 honorarium for all presenters. An invoice and W9 will need to be submitted for payment.

I look forward to hearing back from you.

Many thanks in advance and best wishes,

[redacted]

Hello again,

I've received some clarity around the MyCE login. Since you presented last year, you can visit the website here (https://myce.hms.harvard.edu/portal). You can either login with last year's information (if you recall it), or reset the password and login that way. Everything should be on the portal from there.

Bio: Maddie Deutsch, MD, MPH is a Professor of Clinical Family & Community Medicine at the University of California - San Francisco, where she is the Medical Director of the UCSF Gender Affirming Health Program. She is the President of the US Professional Association for Transgender Health (USPATH) and the Chapter Lead for Primary Care in the World Professional Association for Transgender Health (WPATH) Standards of Care, 8th Version. Dr. Deutsch has served as PI or Co-I on numerous studies in the field of transgender health. She has authored or co-authored more than 40 peer reviewed publications and numerous textbook chapters.

Headshot attached

Objectives:

1. Recognize key considerations in cancer screening for trans and gender expansive individuals
2. Describe approaches to perioperative hormone management
3. Interpret available data on cardiovascular risk in the context of gender affirming hormone therapy

First, I'm so sorry to hear you were sick, but I hope the time off was restorative.

For bio and objectives you can send those directly to me, and we'll upload those on our end.

Thanks!

Hi [redacted],

I'm sorry for the delay. I'm just working through a backlog after being out with covid followed by pre-planned time off. I've logged into the portal and updated my disclosures, but there does not seem to be any other option for me to do things like update bio or objectives. Any thoughts?

Hello again,

I've received some clarity around the MyCE login. Since you presented last year, you can visit the website here (https://myce.hms.harvard.edu/portal). You can either login with last year's information (if you recall it), or reset the password and login that way. Everything should be on the portal from there.

Thank you so much!

Subject: Invitation to present at Fenway HMS 2022 Transgender Health Course

This Message Is From an External Sender
This message came from outside your organization.

Dear Dr. Deutsch,

On behalf of myself and the course directors, [redacted] I am writing to invite you to present at the 8th annual "Advancing Excellence in Transgender Health" conference organized by The Fenway Institute as a Harvard Medical School accredited course, to be held October 13, 2022, through October 16, 2022. In order to ensure the health and wellbeing of our participants and speakers, this year we will once again host our conference virtually.

The course will begin with a pre-conference training, from 1pm-6:30pm on Thursday, October 13th, for attendees who would like to access a few basic training sessions before the full three-day conference.

We are hoping you could present on "Primary and Preventative Health Needs for Transgender People" onFriday, October 14th, 2022, from 12:30 PM to1:30 PM (EST). We are happy to help think through how to organize, re-title, and/or structure the session if needed.

Please let us know if you are available and interested in presenting at this year's conference by June 22nd.

Learning objectives and citations for your session will be due in July. Also, as a part of our commitment to equity and economic justice, we are offering a $1,000 honorarium for all presenters. An invoice and W9 will need to be submitted for payment.

I look forward to hearing back from you.

Many thanks in advance and best wishes,

[redacted]

1. We would like [redacted] to work directly with discharge planning, when appropriate, to assist with postop needs, for example, finding a trans-affirming SNF, making sure IHSS workers are trans-inclusive, making sure social supports actually show up etc.... Can you please each provide the contact for your discharge planning teams? Ideally, [redacted] will be able to shadow these teams to better understand their flow.

2. [redacted] would like to observe surgical cases, to become more familiar with the procedures and after-care needs. Are any of you able to host her for OR cases? Ideally, she will follow the patient from pre-op to PACU, and to the floor if an in-patient case.

3. Once up and running, [redacted] will round on inpatients with high psychosocial needs. We will work out a mechanism for this.

Thank you for all you do.

Maddie

Subject: SAVE THE DATE: UCSF Child and Adolescent Gender Center 10-Year Anniversary Celebration

Dear Esteemed and Treasured Colleagues,

We are excited to finally gather and reconnect for our postponed 10-year anniversary of the UCSF Child and Adolescent Gender Center! Thank you all for your past and ongoing contributions to the UCSF CAGC - it's wonderful to see how this program has grown over the years. We plan to have an in-person lunch celebration in Dogpatch/Potrero Hill near the Mission Bay campus (location to be confirmed after we hear back about whether we have the Rooftop of the new Nancy Friend Pritzker Psychiatry Building reserved). Please save-the-date and be on the lookout for additional details to come!

Please RSVP so we can get an approximate headcount for food. We are so grateful to the UCSF Division of Pediatric Endocrinology for supporting our clinic and sponsoring this celebration - THANK YOU, [redacted]

Why: To celebrate the 10-year anniversary of the UCSF Child and Adolescent Gender Center
When: Saturday, 10/29/2022 from 11:00am-2:00pm
Where: TBD in SF Dogpatch/Potrero Hill

Lunch will be served - please send me food allergies or restrictions if you plan to join!

Best,
[redacted] Steve, [redacted] & [redacted] (CAGC Party Planning Committee!)

[redacted] and I were talking about getting a nice celebratory cake as well.

For local options, I like SF Kebab. La Fromagerie makes really delicious sandwiches as well (which might be an easier food to consume). We should probably keep in mind that people may trickle in and out so maybe think about foods that don't need to be very hot to stay delicious!

Any other ideas?

Dear Esteemed and Treasured Colleagues,

We are excited to finally gather and reconnect for our postponed 10-year anniversary of the UCSF Child and Adolescent Gender Center! Thank you all for your past and ongoing contributions to the UCSF CAGC - it's wonderful to see how this program has grown over the years. We plan to have an in-person lunch celebration in Dogpatch/Potrero Hill near the Mission Bay campus (location to be confirmed after we hear back about whether we have the Rooftop of the new Nancy Friend Pritzker Psychiatry Building reserved). Please save-the-date and be on the lookout for additional details to come!

Please RSVP so we can get an approximate headcount for food. We are so grateful to the UCSF Division of Pediatric Endocrinology for supporting our clinic and sponsoring this celebration - THANK YOU, [redacted]

Why: To celebrate the 10-year anniversary of the UCSF Child and Adolescent Gender Center
When: Saturday, 10/29/2022 from 11:00am-2:00pm
Where: TBD in SF Dogpatch/Potrero Hill

Lunch will be served - please send me food allergies or restrictions if you plan to join!

Best,
[redacted] Steve, [redacted] & [redacted] (CAGC Party Planning Committee!)

Dear Dr. Rosenthal:

On behalf of the Foundation for Advanced Education in the Sciences (FAES), thank you in advance for your participation in the 2022 Endocrinology Review Course. FAES policies and procedures have recently changed, and as such, we must collect a signed agreement from each speaker in the course. Please review, sign, and return the attached agreement no later than October 14, 2022.

In order to receive payment for your participation in this course, you will be asked to complete a W-9 form via DocuSign. Please be sure to complete your W-9 form by October 14, 2022, as well.

Please do not hesitate to let me know if you have any questions or concerns. Thank you.

Sincerely,

Dear Steve, thank you very much

Yes, we had a kind answer from [redacted] several months ago. We would just like to see if you were reconsidered without COVID restriction, by 2023
I am going to talk with [redacted] about the chance to do telemedicine with you. Is a great possibility for me too!

Moreover, if you could invite us to any education talk (o line) could be great!

Are you travelling to Buenos Aires in March?
Thank you very much to all your group for the support!

Also, I am sending a small study about quality of life in chilean children with gender diversity

regards!

Dear [redacted]

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted], in [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and [redacted], who can provide additional information.

Best wishes,

Dear Dr. Rosenthal:

On behalf of the Foundation for Advanced Education in the Sciences (FAES), thank you in advance for your participation in the 2022 Endocrinology Review Course. FAES policies and procedures have recently changed, and as such, we must collect a signed agreement from each speaker in the course. Please review, sign, and return the attached agreement no later than October 14, 2022.

In order to receive payment for your participation in this course, you will be asked to complete a W-9 form via DocuSign. Please be sure to complete your W-9 form by October 14, 2022, as well.

Please do not hesitate to let me know if you have any questions or concerns. Thank you.

Sincerely,

Carline Coote

Subject: CAGC Move to Pritzker

Dear [redacted],

I hope this finds you well! I wanted to check in with you about when the CAGC providers will be able to [redacted]. Some of our providers will continue to work remotely while some will work in person (some will have a combination of in-person and remote clinics). As a reminder, we have CAGC clinics every Tuesday afternoon, starting with a conference from noon-1 PM, and then clinic. [redacted]

Thanks very much,

Steve

Subject: BCH Diversity Website Text

Hi Steve & [redacted],

I created a Word document with the BCH Diversity Website text. There's some notes about surgery - not sure if we want to keep or leave as is - since you worked on the UCSF Health website editing, maybe we should make similar changes in order to be consistent?

Best,

I like both of those options, but probably lean towards SF Kebab—some items—e.g. salads, humus, etc, probably wouldn't need refrigeration during the time of our celebration. We need to be sure to have some gluten free options.
Thanks,
Steve

Subject: CAGC 10-year Celebration Party Planning!

Hi All,

Really glad to be celebrating in-person soon! Just wanted to get some ideas from the group about catering ideas.

[redacted] and I were talking about getting a nice celebratory cake as well.

For local options, I like SF Kebab. La Fromagerie makes really delicious sandwiches as well (which might be an easier food to consume). We should probably keep in mind that people may trickle in and out so maybe think about foods that don't need to be very hot to stay delicious!

Any other ideas?

Best,

Hi Maddie,

Thanks for your email. I would enjoy shadowing the surgeons to get a sense of what the procedure is like and able to talk a little bit more about the procedures with patients. Happy to check in again in a few months regarding this once [redacted] has shadowed and settled in.

I think a Monday dinner would be lovely. I can make time pretty much any Monday in November. Let me which know dates work best for your schedule and I can make it work.

Thank you,

Subject: Surgery observing, assessments, other things

Hi there. I know we'd discussed your interest in shadowing surgeons. For some reason they have been a little dodgy about shadowing lately. I'm not sure what is going on. Right now I am working on trying to get [redacted] into the OR as much as possible as a priority. Once that is sorted, let's revisit our efforts to get you in too.

Also, when we met last week, we ran out of time - which is a good thing, having so many good topics to discuss - but when I had asked you about knowing about surgery referrals, I meant more the actual mechanics now that [redacted] is here, and also how we are going to deal with the updates in SOC8, which is evolving. Perhaps we can put this on our agenda for this week.

Lastly, I'd like to take you to lunch or dinner. This could be lunch during work hours or dinner on a Monday evening if that works for you. With some advance planning, I could come meet you at Lakeshore for lunch if that works better. Please let me know.

Cheers,

Maddie

All sounds fine. La Mediterranee also does great party platters. Don't know the bakery, but sounds great.

Hi All,

Really glad to be celebrating in-person soon! Just wanted to get some ideas from the group about catering ideas.

[redacted] and I were talking about getting a nice celebratory cake as well.

For local options, I like SF Kebab. La Fromagerie makes really delicious sandwiches as well (which might be an easier food to consume). We should probably keep in mind that people may trickle in and out so maybe think about foods that don't need to be very hot to stay delicious!

Any other ideas?

Best,
~[redacted]

Hi All,

Really glad to be celebrating in-person soon! Just wanted to get some ideas from the group about catering ideas.

[redacted] and I were talking about getting a nice celebratory cake as well.

For local options, I like SF Kebab. La Fromagerie makes really delicious sandwiches as well (which might be an easier food to consume). We should probably keep in mind that people may trickle in and out so maybe think about foods that don't need to be very hot to stay delicious!

Any other ideas?

Best,

ORDER

Jane Magnus-Stinson, Judge

***1** Indiana Code § 20-33-13-4, which took effect just a few weeks ago on July 1, 2022, explicitly prohibits a male, based on an individual's sex at birth, from participating on an athletic team that is designated as being a female, women's, or girls' athletic team. Plaintiff A.M. is a ten-year-old transgender girl whose birth-assigned sex was male. Since informing her family before she was four years old that she was a girl, she has been living as a girl and has consistently used her preferred female first name and dressed and appeared as a girl. A.M. has been diagnosed with gender dysphoria,[1] receives medical treatment, and is currently taking a puberty blocker. In 2021, an Indiana state court entered an order changing the gender marker on A.M.'s birth certificate to female and changing her legal first name to her preferred female first name. A.M. is a rising fifth grader at one of the elementary schools within Defendant Indianapolis Public Schools ("IPS"), and her classmates know her only as a girl. Last school year, she played on an IPS girls' softball team, but IPS has informed A.M.'s mother that because of Indiana Code § 20-33-13-4, A.M. will not be able to play on the girls' softball team this year.

A.M., by her mother and next friend, E.M., initiated this litigation against IPS and the Superintendent of IPS ("the Superintendent"), alleging that § 20-33-13-4 violates Title IX, 20 U.S.C. § 1681(a), and the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution by discriminating against A.M. and all transgender-female students. [Filing No. 1.] She has filed a Motion for Preliminary Injunction, seeking to enjoin the enforcement of § 20-33-13-4 so that she can play on the girls' softball team beginning in mid-August. [Filing No. 8.] IPS and the Superintendent take no position regarding whether the Court should issue a preliminary injunction, [Filing No. 35], but the State of Indiana ("the State") has intervened in this case and opposes A.M.'s motion, [Filing No. 27; Filing No. 36]. Additionally, both A.M. and the State have filed motions to exclude expert opinions offered by the other in connection with the Motion for Preliminary Injunction, [Filing No. 38; Filing No. 47], and five female athletes have filed a Motion for Leave to File Brief of Amici Curiae in support of the State's opposition to the issuance of a preliminary injunction ("the Amici Curiae Motion"), [Filing No. 31]. All of these motions are now ripe for the Court's adjudication.

I.

Evidentiary Motions

Before addressing A.M.'s Motion for Preliminary Injunction, the Court considers the Amici Curiae Motion, [Filing No. 31], the State's Motion to Exclude Opinions of Fortenberry, [Filing No. 38], and A.M.'s Motion to Exclude Expert Testimony, [Filing No. 47]. All of these motions bear on what evidence the Court will consider in ruling on the Motion for Preliminary Injunction.

A. The Amici Curiae Motion

***2** In its Amici Curiae Motion, the State seeks leave to file a Brief of Amici Curiae on behalf of five female athletes who, the State argues, "bring a unique perspective to this case and to the public discourse more generally." [Filing No. 31 at 2.] The State asserts that: (1) several of the proposed amici are female athletes who are materially interested in this case because they are involved in cases pending elsewhere; (2) all of the proposed amici offer a unique perspective on how § 20-33-13-4 will affect biological females; and (3) the amicus brief will assist the Court by offering "ideas, arguments, theories, insights, facts, or data that are not to be found in the parties' briefs." [Filing No. 31 at 2-4 (quotation and citation omitted).] A.M. did not file a response to the Amici Curiae Motion.

The Seventh Circuit "has held that whether to allow the filing of an amicus curiae brief is a matter of 'judicial grace.' " *Voices for Choices v. Illinois Bell Tel. Co.*, 339 F.3d 542, 544 (7th Cir. 2003) (quoting *National Organization for Women, Inc. v. Scheidler*, 223 F.3d 615, 616 (7th Cir. 2000)). In deciding whether to permit such a brief, courts should consider "whether the brief will assist the judges by presenting ideas, arguments, theories, insights, facts, or data that are not to be found in the parties' briefs." *Voices for Choices*, 339 F.3d at 545. "The criterion is more likely to be satisfied in a case in which a party is inadequately represented; or in which the would-be amicus has a direct interest in another case that may be materially affected by a decision in this case; or in which the amicus has a unique perspective or specific information that can assist the court beyond what the parties can provide." *Id.* (citing *Scheidler*, 223 F.3d at 616-17).

The five women who seek to file the amicus brief all wish to bring to the Court's attention their experiences either participating in athletics before and after the enactment of Title IX, competing against transgender female athletes, or observing others competing against transgender female athletes. They include Debbie Powers, who played basketball in Indiana before Title IX was enacted and then coached volleyball after its enactment; Selina Soule, a Connecticut track and field athlete who lost to two transgender female athletes in her preliminary race at the state championship and did not qualify for the finals in her event by two spots; Chelsea Mitchell, a runner who lost to two transgender female athletes more than twenty times; Cynthia Monteleone, a track coach, athlete, and mother, who watched her daughter lose to a transgender female athlete at her first high school track meet; and Madison Kenyon, a collegiate track athlete who has competed against transgender female athletes and who watched her teammate be bumped from placing in a race by a transgender female athlete. The Court acknowledges these experiences, and discusses them generally below in connection with its consideration of the public interest involved in the grant or denial of A.M.'s Motion for Preliminary Injunction. But the Court's duty in deciding A.M.'s Motion for Preliminary Injunction is to consider the effect of an injunction on the parties to this litigation – A.M. on the one hand, and IPS and the Superintendent on the other – and not on the five amici or other hypothetical individuals. The Court finds that the proposed amicus brief will not aid the Court and does not alter its analysis. Accordingly, the Amici Curiae Motion, [Filing No. 31], is **DENIED**.

B. Motions to Exclude

1. The State's Motion to Exclude Opinions of Fortenberry

In its Motion to Exclude Opinions of Fortenberry, the State asks the Court to exclude Dr. James Fortenberry's opinions on "athletic performance, competitiveness, and transgender athletes" from consideration in connection with A.M.'s Motion for Preliminary Injunction. [Filing No. 39 at 8.] The State contends that A.M. did not adequately disclose all of the information underlying Dr. Fortenberry's opinions. [Filing No. 39 at 3-5.] It argues further that Dr. Fortenberry is not an expert on those issues and that his opinions are not reliable because he has not pointed to any studies or data that support his opinions. [Filing No. 39 at 5-8.]

***3** In her response, A.M. outlines Dr. Fortenberry's experience and argues that his report adequately identifies the source of his opinions, that his opinions are the same types that are set forth by the State's experts, and that he is qualified to testify regarding the physical effects of testosterone-induced puberty on athletic advantage. [Filing No. 49 at 6-14.] A.M. also asserts that the fact that the State's expert disagrees with Dr. Fortenberry's opinions does not make those opinions unreliable. [Filing No. 49 at 14-17.]

The State replies that Dr. Fortenberry was obligated to disclose all materials he reviewed, not only those he actually relied upon. [Filing No. 54 at 3-4.] It also reiterates its arguments that Dr. Fortenberry is not an expert regarding

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.
Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00655

Obtained via CPRA by Judicial Watch, Inc.

athletic performance and that his opinions are not reliable. [Filing No. 54 at 8-14.]

As will be addressed below, the Court relies on the Declaration of Dr. Fortenberry only to set forth basic background information regarding gender identity and gender dysphoria – information with which the State's expert does not appear to disagree. [*See* Filing No. 8-1.] Because the State does not seek to exclude the only information Dr. Fortenberry provides that is relied upon by the Court, the State's Motion to Exclude Opinions of Fortenberry is **DENIED AS MOOT**. [Filing No. 38.]

2. A.M.'s Motion to Exclude Expert Testimony

A.M. seeks to exclude the expert testimony of Dr. James Cantor and Dr. Emma Hilton in its entirety, and the expert testimony of Dr. Tommy Lundberg to a certain extent. The Court considers each expert's testimony in turn.

a. Dr. Cantor

A.M. seeks to exclude the opinions of Dr. Cantor, who opines that gender dysphoria in adults is not the same as in children or adolescents, that many children who experience gender dysphoria cease to do so during puberty, that there is little evidence that social transition improves the mental health of gender dysphoric children, and that suicide in transgender individuals is rare. [*See* Filing No. 36 at 12-14.] A.M. argues that Dr. Cantor does not discuss any facts or circumstances specific to her or the facts of this case, but instead that he opines generally regarding the diagnosis of gender dysphoria and the standard of care. [Filing No. 48 at 8.] She also contends that Dr. Cantor's opinions are not relevant to the State's purported interests in connection with § 20-33-13-4 – to foster separate athletic opportunities for girls and boys, to promote the safety of student athletes, and to maintain the integrity of sports – that he is not qualified to offer his opinions, and that his opinions are unreliable because they conflict with applicable standards of care and legal precedent. [Filing No. 48 at 8-18.]

In its response, the State argues that Dr. Cantor's opinions are relevant because A.M. asserts that § 20-33-13-4 is overbroad and does not set forth an as-applied challenge, so Dr. Cantor need not address A.M.'s medical situation specifically. [Filing No. 57 at 14.] It asserts that Dr. Cantor is qualified even though he has not treated anyone under the age of 16 because he only seeks to "provide an overview of the scientific literature relevant to this case." [Filing No. 57 at 15.] The State highlights Dr. Cantor's qualifications as a "neuroscientist and sex researcher" who completed "a clinical internship assessing and treating people with a wide range of sexual and gender identity issues." [Filing No. 57 at 15 (quotation and citation omitted).] The State also takes issue with A.M.'s assertion that Dr. Cantor's methodology is flawed, noting that he relied on numerous studies for his opinions and that A.M. does not point to additional studies he should have considered but did not. [Filing No. 57 at 16-18.]

***4** A.M. reiterates many of her arguments in her reply brief. [Filing No. 58.]

The Court can make short shrift of A.M.'s request to exclude Dr. Cantor's opinions. The main disagreements Dr. Cantor has with Dr. Fortenberry relate to the effects of gender dysphoria generally and the appropriate treatment. Here, the Court is concerned with the effects of gender dysphoria on A.M. and the treatment she has had and hopes to receive, and A.M.'s mother has provided sufficient evidence such that the Court need not and will not look to the dueling testimony of Dr. Cantor and Dr. Fortenberry on those issues. Consequently, the Court **DENIES AS MOOT** A.M.'s Motion to Exclude as it applies to Dr. Cantor's testimony. [Filing No. 47.]

b. Dr. Hilton

A.M. seeks to exclude the opinions of Dr. Hilton, upon whom the State relies for testimony regarding "sex differences in development and how they affect sporting performance, ... [and] performance gaps between males and females in sports," and for her proposition that puberty blockers do not completely negate "male athletic advantage." [Filing No. 36 at 14-15.] A.M. argues that Dr. Hilton is not qualified to opine regarding differences in athletic performance between transgender women and cisgender women, or on the nature, treatment, or "reversibility" of gender dysphoria. [Filing No. 48 at 22-26.]

The State argues in its response that Dr. Hilton is qualified because she has a Ph.D. in developmental biology and extensive "experience in the field," that her research with animals is applicable to humans, and that she can opine regarding "how biology affects sports performance." [Filing No. 57 at 6-13.]

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00656

Obtained via CPRA by Judicial Watch, Inc.

In her reply, A.M. argues that Dr. Hilton's general experience does not make her qualified to opine on the specific issues in this case. [Filing No. 58 at 10-15.]

As discussed above, the Court need not, and will not, consider expert evidence regarding the general effects of or appropriate treatment for gender dysphoria. Additionally, the issue here is whether A.M. has met her burden of showing that the requirements for the issuance of a preliminary injunction are present under the circumstances of this case, and the Court – as discussed more fully below – need not, and will not, consider expert evidence regarding the athletic performance of transgender athletes in order to resolve that issue. Accordingly, A.M.'s Motion to Exclude is **DENIED AS MOOT** as it applies to Dr. Hilton's testimony. [Filing No. 47.]

c. Dr. Lundberg

Finally, A.M. seeks to exclude Dr. Lundberg's opinion that "biological differences between birth males and birth females affect [athletic] performance before the onset of puberty." [Filing No. 48 at 31.] A.M. argues that Dr. Lundberg's opinion is flawed for various reasons and "is not good science." [Filing No. 48 at 26-31.] The state responds that Dr. Lundberg's opinion is supported by available literature and data, and is consistent with his deposition testimony. [Filing No. 57 at 2-6.] A.M. argues in her reply that Dr. Lundberg's opinion that males have an athletic advantage over females even before puberty due to biological differences is based on speculation. [Filing No. 58 at 16-18.]

***5** Consistent with the Court's findings regarding the testimony of Dr. Fortenberry and Dr. Hilton, the Court need not consider opinions regarding whether differences between the sexes in athletic performance exist before the onset of puberty in order to decide A.M.'s Motion for Preliminary Injunction. The Court **DENIES AS MOOT** A.M.'s Motion to Exclude to the extent that Dr. Lundberg opines regarding that issue. [Filing No. 47.][2]

II.

Motion for Preliminary Injunction

A. Factual Background

1. Gender Identity and Gender Dysphoria

Gender identity refers to one's sense of oneself as being a particular gender. [Filing No. 8-1 at 4.] Individuals whose gender identities are congruent with the sex that they were assigned at birth are referred to as "cisgender." [Filing No. 8-1 at 4.] Conversely, transgender and nonbinary individuals have gender identities that are not the same as their sex as assigned at birth. [Filing No. 8-1 at 4.] Studies indicate that up to 0.6% of adolescent and adult individuals in Indiana identify as transgender, but no studies provide reliable estimates of the population proportion of pre-pubertal children with gender dysphoria. [Filing No. 8-1 at 4.] Gender dysphoria is a recognized condition – codified in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders and the World Health Organization's International Classification of Diseases – that occurs when a transgender person experiences a constant sense of distress because of the incongruence between their experienced gender and their birth-assigned sex. [Filing No. 8-1 at 4.]

2. A.M.

A.M. is ten years old and finished fourth grade at an IPS elementary school in the spring of 2022. [Filing No. 23 at 1.] She will be attending the same elementary school for her fifth grade year. [Filing No. 23 at 1.] A.M.'s birth-assigned sex was male, but before she was four years old she informed her mother and other family members that she was a girl. [Filing No. 23 at 1.] At that time, A.M. informed her mother that she was having thoughts of mutilating herself to get rid of her penis. [Filing No. 23 at 1.] Since that time, A.M. has been living as a girl. [Filing No. 23 at 2.] She consistently uses her preferred female first name and consistently dresses and appears as a girl, both at home and in public. [Filing No. 23 at 2.] Very few people outside of A.M.'s immediate family know that A.M.'s sex assigned at birth was male. [Filing No. 23 at 2.]

A.M.'s mother has informed A.M.'s teachers and administrators at her school that A.M.'s sex assigned at birth was male, but her classmates know her only as a girl. [Filing No. 23 at 2.] The teachers and administrators at her school refer to her by her female first name and allow her to use the girls' restrooms at the school. [Filing No. 23 at 2.]

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

A.M. was diagnosed with gender dysphoria by the Riley Gender Clinic when she was six years old. [Filing No. 23 at 2.] Gender dysphoria has caused A.M. to be suicidal, depressed, anxious, angry about her body, and afraid that she will not be able to be a girl. [Filing No. 23 at 2.] A.M. has been receiving care at the Gender Health Clinic at Riley Hospital in Indianapolis since 2018. [Filing No. 23 at 2.] Since August 2021, she has been taking a puberty blocker, Leuprorelin, to prevent her from going through puberty. [Filing No. 23 at 2.] A.M. is not experiencing any of the physiological changes that an adolescent male would experience during puberty. [Filing No. 23 at 3.] A.M. and her mother would like for her to be given estrogen, or some other appropriate feminizing hormone, when she is old enough so that she can develop female physical characteristics. [Filing No. 23 at 3.]

***6** In the fall of 2021, a Marion County court entered an order changing the gender marker on A.M.'s birth certificate from male to female and changing her first name to her preferred female first name. [Filing No. 23 at 3.] Also in 2021, A.M. played on her elementary school's girls' softball team, which plays in the late summer and fall. [Filing No. 23 at 3.] At that time, her team played against another IPS school that also had a girls' softball team. [Filing No. 23 at 3.] A.M. has enjoyed playing softball and did not appear to have a competitive advantage over the other girls on the team. [Filing No. 23 at 3.] In fact, she was one of the weaker athletes on the team. [Filing No. 23 at 3.] Playing softball helps to lessen the distressing symptoms of gender dysphoria that A.M. suffers from and has allowed her to experience her life more fully as a girl. [Filing No. 23 at 3.] Softball participation has resulted in a better self-image and confidence for A.M. [Filing No. 23 at 3.]

3. Indiana Code § 20-33-13-4

On May 24, 2022, both houses of the Indiana General Assembly approved House Enrolled Act 1041 over the veto of Governor Eric Holcomb, and it became law as codified at Indiana Code § 20-33-13-4. Section 20-33-13-4 applies to the following:

> (1) An athletic team or sport that is organized, sanctioned, or sponsored by a school corporation or public school in which the students participating on the athletic team or in the sport compete against students participating on an athletic team or in a sport that is organized, sanctioned, or sponsored by another school corporation, public school, or nonpublic school.
>
> (2) An athletic team or sport that is organized, sanctioned, or sponsored by a nonpublic school that voluntarily competes against an athletic team or sport that is organized, sanctioned, or sponsored by a school corporation or public school.
>
> (3) An athletic team or sport approved or sanctioned by an association for purposes of participation in a high school interscholastic event.

Ind. Code § 20-33-13-1.

Section 20-33-13-4 provides that:

> (a) A school corporation, public school, nonpublic school, or association that organizes, sanctions, or sponsors an athletic team or sport described in section 1 of this chapter shall expressly designate the athletic team or sport as one (1) of the following:
>
> (1) A male, men's, or boys' team or sport.
>
> (2) A female, women's, or girls' team or sport.
>
> (3) A coeducational or mixed team or sport.
>
> (b) *A male, based on a student's biological sex at birth in accordance with the student's genetics and reproductive biology,* may not participate on an athletic team or sport designated under this section as being a female, women's, or girls' athletic team or sport.

Ind. Code § 20-33-13-4 (emphasis added).

Section 20-33-13-5 provides a grievance procedure for students and parents, stating:

> (a) A student or parent of a student may submit a grievance to a school corporation, public school, nonpublic school, or association for a violation of section 4 of this chapter.
>
> (b) Each school corporation, public school, nonpublic school, and association described in section 4 of this chapter shall:
>
> (1) establish and maintain a grievance procedure; or
>
> (2) maintain a grievance or protest procedure that the school corporation, public school, nonpublic school, or association established before July 1, 2022;

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00658

for the resolution of a grievance submitted under this section.

Ind. Code § 20-33-13-5.

4. The Effect of Indiana Code § 20-33-13-4 on A.M.

In 2022, there will be four elementary schools, including the elementary school A.M. attends, that will field girls' softball teams that will compete against each other. [Filing No. 23 at 3.] IPS staff have informed A.M.'s mother that because of § 20-33-13-4, A.M. will not be able to play on the girls' softball team. [Filing No. 23 at 4.] A.M.'s school has a boys' baseball team, but she cannot play on it because she is not a boy and no one at school recognizes her as anything but a girl. [Filing No. 23 at 4.] A.M.'s mother believes that forcing A.M. to play on the boys' team would undermine her core identity as a girl and her social transition that is essential to moderate the symptoms of her gender dysphoria, and would be so traumatic that she would not play on the boys' team. [Filing No. 23 at 4.] Additionally, denying her the opportunity to participate on the girls' team will "out" her to her classmates as someone who is not "really" a girl, which would be extremely traumatic for her, would undermine her social transition, and would injure her. [Filing No. 23 at 4.] A.M. would like to be able to play girls' team sports as she progresses through school. [Filing No. 23 at 4.]

B. Standard of Review

***7** "A preliminary injunction is an extraordinary remedy." *Whitaker By Whitaker v. Kenosha Unified Sch. Dist. No. 1 Bd. of Educ.*, 858 F.3d 1034, 1044 (7th Cir. 2017). It is " 'an exercise of a very far-reaching power, never to be indulged in except in a case clearly demanding it.' " *Cassell v. Snyders*, 990 F.3d 539, 544 (7th Cir. 2021) (quoting *Girl Scouts of Manitou Council, Inc. v. Girl Scouts of U.S. of Am., Inc.*, 549 F.3d 1079, 1085 (7th Cir. 2008)). "[A] party requesting a preliminary injunction must generally show reasonable diligence." *Benisek v. Lamone*, —— U.S. ——, 138 S. Ct. 1942, 1944, 201 L.Ed.2d 398 (2018) (holding that "plaintiffs' unnecessary, years-long delay in asking for preliminary injunctive relief weighed against their request").

The purpose of a preliminary injunction is to preserve the parties' positions until a trial on the merits can be held. *GEFT Outdoors, LLC v. City of Westfield*, 922 F.3d 357, 371 (7th Cir. 2019). "To determine whether a situation warrants such a remedy, a district court engages in an analysis that proceeds in two distinct phases: a threshold phase and a balancing phase." *Valencia v. City of Springfield, Ill.*, 883 F.3d 959, 965 (7th Cir. 2018) (quotation and citation omitted).

In the "threshold phase," a party seeking a preliminary injunction must show that: "(1) it will suffer irreparable harm in the period before the resolution of its claim; (2) traditional legal remedies are inadequate; and (3) there is some likelihood of success on the merits of the claim." *HH-Indianapolis, LLC v. Consol. City of Indianapolis & Cnty. of Marion, Ind.*, 889 F.3d 432, 437 (7th Cir. 2018) (citation omitted). "If the plaintiff fails to meet any of these threshold requirements, the court must deny the injunction." *GEFT Outdoors, LLC*, 922 F.3d at 364 (quotation and citation omitted). "However, if the plaintiff passes that threshold 'the court must weigh the harm that the plaintiff will suffer absent an injunction against the harm to the defendant from an injunction, and consider whether an injunction is in the public interest.' " *Id.* (quoting *Planned Parenthood of Ind. & Ky., Inc. v. Comm'r of Ind. State Dep't of Health*, 896 F.3d 809, 816 (7th Cir. 2018)).

C. Discussion

A.M. argues that § 20-33-13-4 violates both Title IX and the Equal Protection Clause of the Fourteenth Amendment. The Court first considers whether A.M. has met the standard for the issuance of a preliminary injunction as to her Title IX claim.

1. Title IX Claim

a. Likelihood of Success on the Merits

In support of her Motion for Preliminary Injunction, A.M. argues that she will succeed on the merits of her Title IX claim because discrimination on the basis of a student's transgender status constitutes discrimination on the basis of sex under Title IX. [Filing No. 24 at 17.] A.M. points to *Whitaker v. Kenosha Unified Sch. Dist. No. 1 Bd. of Educ.*, 858 F.3d 1034 (7th Cir. 2017), and *Bostock v. Clayton Cnty., Ga.*, —— U.S. ——, 140 S. Ct. 1731, 207 L.Ed.2d 218 (2020), to support her argument. [Filing No. 24 at 17-19.] A.M. asserts that, under § 20-33-13-4, she is being treated differently than her cisgender classmates because they can play on the girls' softball team and she cannot, based solely on the fact that she is a transgender girl. [Filing No. 24 at 20.] A.M. points to the fact that the State of Indiana changed the gender marker on her birth certificate and recognizes that she is a

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00659

Obtained via CPRA by Judicial Watch, Inc.

girl, and that because she is taking puberty blockers, she "is indistinguishable from other girls her age and she has no competitive or physiological advantages over her teammates or opponents" and "is not particularly accomplished at the sport." [Filing No. 24 at 20.] A.M. asserts that because she, as a transgender female, is being subjected to different rules, sanctions, and treatment than non-transgender students, § 20-33-13-4 violates Title IX. [Filing No. 24 at 21.]

***8** In its response, the State argues that "[t]he statutory context of Title IX confirms that its drafters understood sex as a binary concept." [Filing No. 36 at 19.] It asserts that *Whitaker* is distinguishable because the Seventh Circuit applied the wrong standard to the likelihood of success on the merits analysis, determining that the plaintiff had a "better than negligible" chance of succeeding rather than requiring a "strong showing" of success on the merits. [Filing No. 36 at 20-21.] The State also argues that the Seventh Circuit in *Whitaker* did not address "the interplay between Title IX's ban on sex discrimination and its requirement that schools provide equal opportunities to girls." [Filing No. 36 at 21.] It further contends that *Bostock* involved Title VII, and that the Supreme Court expressly refused to "prejudge any ... question" about what "other federal or state laws" addressing "sex discrimination" require. [Filing No. 36 at 22 (quotation and citation omitted).] The State asserts that § 20-33-13-4 actually promotes the same goals as Title IX by providing equal opportunities to both sexes. [Filing No. 36 at 22.] It further argues that § 20-33-13-4 restricts a male, based on a student's biological sex at birth, from participating in a girls' athletic sport, but A.M. claims discrimination based on her status as transgender – a status that, it argues, Title IX does not govern. [Filing No. 36 at 22.] The State argues that changing A.M.'s birth certificate does not change her biological sex at birth, "which is [§ 20-33-13-4 's] only concern." [Filing No. 36 at 23.] It contends that A.M. is then left with a claim of discrimination based on gender identity, which Title IX does not address. [Filing No. 36 at 23.] The State also asserts that Title IX does not govern opportunities for "high and low testosterone individuals, however that might be defined," and that A.M.'s individual athletic performance "says nothing about Title IX." [Filing No. 36 at 24.] Finally, the State argues that A.M.'s position creates an untenable situation for schools because Title IX requires schools to create equal opportunities for girls in athletics, but "[a]ccess of biological males to girls' sports threatens those opportunities and places Title IX in tension with itself." [Filing No. 36 at 24-25.]

In her reply, A.M. argues that *Whitaker* remains good law, and that the Seventh Circuit's application of the "better than negligible" standard does not affect its holding that discriminating against a transgender student based on his or her transgender status is discrimination on the basis of sex and is prohibited by Title IX. [Filing No. 50 at 5-7.] She asserts that although the Supreme Court in *Bostock* did not address the propriety of sex-segregated athletics under Title IX, it did hold that discriminating against an individual for being transgender constitutes sex discrimination. [Filing No. 50 at 8.] A.M. argues that the State asks the Court to ignore the Seventh Circuit's holding in *Whitaker*, and that Title IX "does not purport to define transgender students by their sex assigned at birth or by other physiological characteristics" in any event. [Filing No. 50 at 10.] A.M. takes issue with the State's argument that she wants participation in girls' sports to be determined by self-identification, testosterone, and athletic skill, arguing that "it is insulting to A.M. and other transgender persons to imply that persons will casually choose or switch gender identities," and that "the State presents no evidence that such a practice is an actual problem in need of [a] solution." [Filing No. 50 at 11.] A.M. notes that IPS does not claim that allowing A.M. to play on the girls' softball team would place it in a difficult position and that, instead, IPS has no issue with letting her play. [Filing No. 50 at 11.] Finally, A.M. points to "numerous athletic organizations that have found ways to accommodate transgender persons and that would allow A.M. to participate if she had the athletic ability," including the Indiana High School Athletic Association's ("IHSAA") policy that allows transgender athletes to play sports consistent with their gender identities if certain standards are met, such as completing one year of hormone treatment for transgender females. [Filing No. 50 at 12-13.]

"The likelihood of success on the merits is an early measurement of the quality of the underlying lawsuit." *Michigan v. U.S. Army Corps of Eng'rs*, 667 F.3d 765, 788 (7th Cir. 2011). "A plaintiff need not prove beyond a preponderance of the evidence that it will win on the merits, but it must at least make a 'strong' showing of likelihood of success." *Protect Our Parks, Inc. v. Buttigieg*, 39 F.4th 389, 397 (7th Cir. 2022) (citing *Ill. Republican Party v. Pritzker*, 973 F.3d 760, 762-63 (7th Cir. 2020)).

Title IX provides that no person "shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any educational program or activity receiving Federal financial assistance." 20 U.S.C. §

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.

UCSF-DCNF-00660

Obtained via CPRA by Judicial Watch, Inc.

1681(a). Among other things, an institution covered by Title IX may not:

> ***9** (1) Treat one person differently from another in determining whether such person satisfies any requirement or condition for the provision of such aid, benefit, or service;
>
> (2) Provide different aid, benefits, or services or provide aid, benefits, or services in a different manner;
>
> (3) Deny any person such aid, benefit, or service; [or]
>
> (4) Subject any person to separate or different rules of behavior, sanctions, or other treatment.

34 C.F.R. § 106.31(b). The parties do not dispute that IPS receives federal funds and is an institution covered by Title IX. The question is whether A.M. has a strong likelihood of showing that IPS's and the Superintendent's application of § 20-33-13-4 to prohibit A.M. from playing on the girls' softball team constitutes discrimination against A.M. based on her sex.

The United States Supreme Court has not yet considered whether "sex" for purposes of Title IX means just an individual's biological sex at birth, or also includes their gender identity. In *Bostock*, however, it considered the meaning of "sex" in the Title VII context, a context that the Seventh Circuit has found instructive when defining "sex" under Title IX. *See Whitaker*, 858 F.3d at 1047 ("[T]his court has looked to Title VII when construing Title IX."); *Smith v. Metro. Sch. Dist. Perry Twp.*, 128 F.3d 1014, 1023 (7th Cir. 1997) ("[I]t is helpful to look to Title VII to determine whether the alleged sexual harassment is severe and pervasive enough to constitute illegal discrimination on the basis of sex for purposes of Title IX."). In *Bostock*, the Supreme Court found that an employer violates Title VII by firing an employee based on their status as homosexual or transgender. In doing so, the Supreme Court stated:

> [H]omosexuality and transgender status are inextricably bound up with sex. Not because homosexuality or transgender status are related to sex in some vague sense or because discrimination on these bases has some disparate impact on one sex or another, but because to discriminate on these grounds requires an employer to intentionally treat individual employees differently because of their sex....
>
> ***
>
> At bottom, these cases involve no more than the straightforward application of legal terms with plain and settled meanings. For an employer to discriminate against employees for being homosexual or transgender, the employer must intentionally discriminate against individual men and women in part because of sex. That has always been prohibited by Title VII's plain terms.

Bostock, 140 S. Ct. at 1742-43. As to the fact that Title VII does not mention homosexuality or transgender status as a protected characteristic, the Supreme Court "agree[d] that homosexuality and transgender status are distinct concepts from sex," but found that:

> [D]iscrimination based on homosexuality or transgender status necessarily entails discrimination based on sex; the first cannot happen without the second. Nor is there any such thing as a 'canon of donut holes,' in which Congress's failure to speak directly to a specific case that falls within a more general statutory rule creates a tacit exception. Instead, when Congress chooses not to include any exceptions to a broad rule, courts apply the broad rule.... As enacted, Title VII prohibits all forms of discrimination because of sex, however they may manifest themselves or whatever other labels might attach to them.

***10** *Id.* at 1746-47.

The Supreme Court has not similarly considered whether discrimination based on an individual's transgender status constitutes discrimination on the basis of sex in the Title IX context, and the Court acknowledges the Supreme Court's caveat in *Bostock* that no "other federal or state laws that prohibit sex discrimination" were before it. 140 S. Ct. at 1753. But the Supreme Court also did not foreclose the application of its holding to the Title IX context, and the Court finds it appropriate to look to *Bostock* for guidance here. Moreover, the Seventh Circuit has considered whether discrimination based on one's status as transgender constitutes discrimination based on sex under Title IX. In *Whitaker*, decided more than three years before *Bostock*, the Seventh Circuit found that a school's unwritten policy barring a transgender boy from using the boys' bathroom violated Title IX. The Seventh Circuit stated:

> By definition, a transgender individual does not conform to the sex-based stereotypes of the sex that he or she was assigned at birth.... A policy that requires an individual to use a bathroom that does not conform with his or her gender identity punishes that individual for his or her gender non-conformance, which in turn violates Title IX. The School

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00661

Obtained via CPRA by Judicial Watch, Inc.

> District's policy also subjects [plaintiff], as a transgender student, to different rules, sanctions, and treatment than non-transgender students, in violation of Title IX.

Whitaker, 858 F.3d at 1048-49. As to the School District's argument in *Whitaker* that the plaintiff could not "unilaterally declare" his gender, the Seventh Circuit noted that "[t]his is not a case where a student has merely announced that he is a different gender. Rather, [plaintiff] has a medically diagnosed and documented condition. Since his diagnosis, he has consistently lived in accordance with his gender identity." *Id.* at 1050.

Courts within this district have followed *Whitaker* and *Bostock*, finding that it is a violation of Title IX for a public institution to discriminate against an individual on the basis of their transgender status in the context of prohibiting a transgender student from using the bathroom of the sex with which he or she identifies. *See, e.g.*, *B.E. v. Vigo Cnty. Sch. Corp.*, — F. Supp. 3d —, 2022 WL 2291763 (S.D. Ind. June 24, 2022) (granting motion for preliminary injunction filed by transgender male students who were undergoing gender-affirming testosterone therapy, and who have been prohibited from using male bathrooms at school); *A.C. by M.C. v. Metro. Sch. Dist. of Martinsville*, — F. Supp. 3d —, 2022 WL 1289352 (S.D. Ind. April 29, 2022) (holding that transgender male student had established a likelihood of success on the merits of his claim that school district violated Title IX when it prohibited him from using male bathrooms). The court in *B.E.* specifically noted that the fact that the Seventh Circuit applied the "better than negligible" standard in *Whitaker* to the issue of whether there was a likelihood of success on the merits does not affect *Whitaker*'s ultimate holding. *B.E.*, — F.Supp.3d at —, 2022 WL 2291763 at *4 ("[I]t makes sense intuitively that a court's view is not rendered meaningless merely because it looked through the wrong lens.... That seems particularly true here, where the *Whitaker* court never indicated that the issue was a close one or hinted that the low threshold it applied was determinative."). And the court in *A.C. by M.C.* stated that *Whitaker* "remains good law and thus is binding on this court." — F.Supp.3d at —, 2022 WL 1289352, at *6.

***11** Applying *Bostock* and *Whitaker* – both of which are binding on this Court – to the facts of this case leads to a result that is not even a close call: A.M. has established a strong likelihood that she will succeed on the merits of her Title IX claim. IPS and the Superintendent cannot discriminate against A.M. based on her sex, and § 20-33-13-4 will force them to do just that. A law that prohibits an individual from playing on a sports team that does not conform to his or her gender identity "punishes that individual for his or her gender non-conformance," *Whitaker*, 858 F.3d at 1049, which violates the clear language of Title IX. *See also B.P.J. v. West Virginia St. Bd. of Educ.*, 550 F. Supp. 3d 347, 356 (S.D. W. Va. 2021) (granting preliminary injunction in favor of transgender female who wished to join girls' cross country and track teams but was prohibited by West Virginia law from doing so, and noting "[a]ll other students in West Virginia secondary schools – cisgender girls, cisgender boys, transgender boys, and students falling outside of any of these definitions trying to play on the boys' teams – are permitted to play on sports teams that best fit their gender identity. Under this law, B.P.J. would be the only girl at her school ... that is forbidden from playing on a girls' team and must join the boys' team.... [T]his law both stigmatizes and isolates B.P.J."). And, notably, § 20-33-13-4 does not prohibit all transgender athletes from playing with the team of the sex with which they identify – it only prohibits transgender females from doing so. The singling out of transgender females is unequivocally discrimination on the basis of sex, regardless of the policy argument as to why that choice was made. The Court finds that A.M. has established a strong likelihood that she will succeed on the merits of her Title IX claim.

b. Adequacy of Traditional Legal Remedies

A.M. argues that she has no adequate remedy at law because "the emotional harm identified by [A.M.] could not be fully rectified by an award of damages." [Filing No. 24 at 29 (quotation and citation omitted).] The State does not address the adequacy of traditional legal remedies requirement in its response brief, [*see* Filing No. 36], nor does A.M. address it in her reply brief, [Filing No. 50].

A.M.'s mother has identified significant emotional harm that she believes A.M. will suffer if she cannot play on the girls' softball team, including that it will undermine her social transition and potentially cause her the trauma of being "outed" as not "really" a girl. [Filing No. 23 at 4.] The Court finds that this emotional harm could not be addressed adequately through a remedy at law. *See Whitaker*, 858 F.3d at 1046 (holding there was no adequate remedy at law where transgender male had shown that he would suffer prospective emotional harm absent an injunction allowing him to use male restrooms at school). A.M. has sustained her burden of showing that there is no adequate remedy at law for the harm she would suffer absent a preliminary injunction.

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00662

Obtained via CPRA by Judicial Watch, Inc.

c. Likelihood of Suffering Irreparable Harm Absent an Injunction

A.M. argues that a violation of Title IX constitutes irreparable harm *per se*. [Filing No. 24 at 28.] She also asserts that she will suffer the irreparable harm of having her social transition disrupted and being "outed" as a transgender girl. [Filing No. 24 at 28-29.]

The State responds that there are many activities that "enable social transition," and relies on its expert witness, Dr. Cantor, for the proposition that "there is little evidence that transition improves the mental well-being of children." [Filing No. 36 at 36 (quotation and citation omitted).]

In her reply, A.M. reiterates her argument that denying an injunction would force her to disclose that she is a transgender girl, which would be "an irreparable event that would be extremely traumatizing for her." [Filing No. 50 at 19-20.]

"A finding of irreparable harm to the moving party, if the injunction is denied, is 'a threshold requirement for granting a preliminary injunction.' " *DM Trans, LLC v. Scott*, 38 F.4th 608, 617 (7th Cir. 2022) (quoting *Life Spine, Inc. v. Aegis Spine, Inc.*, 8 F.4th 531, 539 (7th Cir. 2021)). Establishing a likelihood of irreparable harm "requires more than a mere possibility of harm. It does not, however, require that the harm actually occur before injunctive relief is warranted. Nor does it require that the harm be certain to occur before a court may grant relief on the merits." *Whitaker*, 858 F.3d at 1045 (quotations and citations omitted). The Seventh Circuit has instructed that "[h]arm is irreparable if legal remedies available to the movant are inadequate, meaning they are seriously deficient as compared to the harm suffered." *DM Trans, LLC*, 38 F.4th at 618.

***12** As discussed above, A.M.'s mother has explained that although teachers and administrators at A.M.'s school know that A.M.'s sex at birth was male, she is known at school only as a female, is referred to by her female first name, and uses the girls' restrooms at school. [Filing No. 23 at 2.] She explains further that A.M.'s gender dysphoria has caused A.M. to be suicidal, depressed, anxious, and angry. [Filing No. 23 at 2.] A.M.'s mother believes that playing softball helped "to lessen the distressing symptoms of [A.M.'s] gender dysphoria and allowed her to experience her life more fully as a girl," which has "resulted in a better self-image and confidence." [Filing No. 23 at 4.] A.M.'s mother notes that prohibiting A.M. from playing on the girls' softball team will "out" her to her classmates as someone who is not "really" a girl, and "[t]his will be extremely traumatic for her and will also undermine her social transition and will injure her." [Filing No. 23 at 4.] The Court finds that A.M. has sustained her burden of showing that she would suffer irreparable harm absent an injunction.

d. Balance of Harms

A.M. argues that the balance of harms favors entering a preliminary injunction, stating that "[i]t is difficult to theorize what possible harm can occur in maintaining the status quo so that A.M. may continue to play with the other girls on the softball team." [Filing No. 24 at 29.] She asserts that an injunction will only force IPS to conform its conduct to Title IX, which it cannot claim is harmful. [Filing No. 24 at 29.]

In response, the State argues that issuing an injunction would "inflict harm to the governance process" and also "could force biological girls to compete against students who identify as girls but retain all the biological advantages of boys." [Filing No. 36 at 37.]

A.M. asserts in her reply that "no harm has occurred by allowing A.M. to play on her softball team and this is all that will occur when the preliminary injunction is granted." [Filing No. 50 at 20.]

Once the plaintiff has met her burden of showing that she has a likelihood of success on the merits, that she has no adequate remedy at law, and that she will suffer irreparable harm absent an injunction, "the court must weigh the harm that the plaintiff will suffer absent an injunction against the harm to the defendant from an injunction, and consider whether an injunction is in the public interest." *Planned Parenthood of Ind. and Ky., Inc.*, 896 F.3d at 816. The Seventh Circuit "employs a sliding scale approach," where " '[t]he more likely the plaintiff is to win, the less heavily need the balance of harms weigh in [her] favor; the less likely [she] is to win, the more need it weigh in [her] favor.' " *Id.* (quoting *Valencia*, 883 F.3d at 966).

As the Court has already recognized, A.M. has presented evidence that the harm she would face absent an injunction is substantial. On the other side of the scale, there is no evidence of concrete harm to IPS or the State that would occur

Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00663

Obtained via CPRA by Judicial Watch, Inc.

if an injunction issues. The harm the State suggests could occur – that biological girls will be forced to compete against transgender girls who allegedly have an athletic advantage – is speculative, and there is no evidence in the record that allowing A.M. to play on the girls' softball team will make this harm a reality. Indeed, A.M. played on the girls' softball team last season, and the State has not set forth any evidence that this harmed anyone. There is no evidence that other players complained about A.M. being on the team due to an athletic advantage, or that she actually has an athletic advantage. Given the strong likelihood that A.M. will succeed on the merits of her Title IX claim, the State would need to show that the balance of harms significantly weighs in IPS's or the State's favor. *Planned Parenthood of Ind. and Ky., Inc.*, 896 F.3d at 816. It has not done so, and the Court finds that the balance of harms weighs in favor of issuing a preliminary injunction.

e. Public Interest

Finally, A.M. argues that the public interest would be furthered by issuing an injunction because "an injunction in favor of ... the rights secured by Title IX is always in the public interest." [Filing No. 24 at 29-30.]

***13** The State reiterates its balance-of-harms arguments – that an injunction would harm the governance process and could harm others by "forc[ing] biological girls to compete against students who identify as girls but retain all the biological advantages of boys." [Filing No. 36 at 37.]

In her reply, A.M. also relies on her balance-of-harms arguments, noting that no harm has occurred from A.M. playing on the girls' softball team thus far. [Filing No. 50 at 20.]

After finding that the plaintiff has satisfied the threshold requirements for a preliminary injunction, the Court must also consider "whether an injunction is in the public interest." *Planned Parenthood of Ind. and Ky.*, 896 F.3d at 816. Again, the State has not presented any tangible evidence that the public will be harmed by the issuance of an injunction in this case. The State relies on situations where high school female athletes in other states have had to compete against transgender females, to the detriment of their athletic goals. The State warns of dire consequences if an injunction issues that "reaches beyond A.M. alone." [Filing No. 36 at 37.] The Supreme Court in *Bostock* acknowledged similar "policy appeals" set forth by employers arguing that Title VII should not be applied to protect homosexual and transgender employees, noting:

> [T]he employers are left to abandon their concern for expected applications and fall back to the last line of defense for all failing statutory interpretation arguments: naked policy appeals. If we were to apply the statute's plain language, they complain, any number of undesirable policy consequences would follow.... Gone here is any pretense of statutory interpretation; all that's left is a suggestion we should proceed without the law's guidance to do as we think best. But that's an invitation no court should ever take up. The place to make new legislation, or address unwanted consequences of old legislation, lies in Congress.

Bostock, 140 S. Ct. at 1753.

Following the Supreme Court's lead, the Court declines the State's invitation to delve into the "what ifs." Here, in this case, the public interest lies in enjoining IPS and the Superintendent from applying a statute that discriminates against A.M. based on her status as a transgender female in violation of Title IX. *See B.E.*, — F.Supp.3d at —, 2022 WL 2291763, at *7 (finding it was in the public interest to issue injunction prohibiting school district from implementing policy requiring transgender boys to use girls' restrooms). The State has not presented any countervailing legal right that should outweigh A.M.'s right to be protected by Title IX.

f. Security

A.M. argues in support of her Motion for Preliminary Injunction that the Court should not require a bond because the issuance of a preliminary injunction "will not impose any monetary injuries on IPS." [Filing No. 24 at 30.] IPS and the Superintendent do not discuss the bond requirement in their response brief.

Federal Rule of Civil Procedure 65(c) provides that a court may issue a preliminary injunction "only if the movant gives security in an amount that the court considers proper to pay the costs and damages sustained by any party found to have been wrongfully enjoined." But if "there's no danger that the opposing party will incur any damages from the injunction," a court may choose not to require a bond. *Habitat Educ. Ctr. v. U.S. Forest Serv.*, 607 F.3d 453, 458 (7th Cir. 2010). Because IPS and the Superintendent do not address A.M.'s argument

 © 2022 Thomson Reuters. No claim to original U.S. Government Works.
Obtained via CPRA by Judicial Watch, Inc.

UCSF-DCNF-00664

Obtained via CPRA by Judicial Watch, Inc.

in their response, the Court presumes that they do not object to A.M.'s request that the Court not require a bond. *See Sojka v. Bovis Lend Lease, Inc.*, 686 F.3d 394, 395 (7th Cir. 2012) (noting that a party concedes a point by failing to respond to it in their response brief). Consequently, and because IPS and the Superintendent have not shown that they will incur any damages if an injunction issues in any event, the Court will not require A.M. to post a bond.

***14** In sum, A.M. has established that she has a strong likelihood of succeeding on the merits of her claim that IPS's and the Superintendent's application of § 20-33-13-4 to prohibit her from playing on the girls' softball team violates Title IX. She has also established that she would suffer irreparable harm for which there is no adequate legal remedy, and that both the balance of harms and the public interest favor issuing an injunction. Consequently, A.M.'s Motion for Preliminary Injunction, [Filing No. 8], is **GRANTED** and the Court will not require A.M. to post a bond.

2. Equal Protection Claim

A.M. also alleges that prohibiting her from playing on the girls' softball team pursuant to § 20-33-13-4 violates her rights under the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution. [Filing No. 1 at 13.] "[F]ederal courts are supposed to do what they can to avoid making constitutional decisions, and strive doubly to avoid making unnecessary constitutional decisions." *ISI Int'l, Inc. v. Borden Ladner Gervais LLP*, 256 F.3d 548, 552 (7th Cir. 2001). Because the Court has found that A.M. is entitled to a preliminary injunction on her Title IX claim, it will not consider whether she is entitled to a preliminary injunction on her Equal Protection claim.

III.

Conclusion

A.M.'s challenge to the lawfulness of § 20-33-13-4 raises controversial issues regarding the boundaries of Title IX and whether and how those boundaries should stretch and shift in an ever-changing world. But "the limits of the drafters' imagination supply no reason to ignore the law's demand. When the express terms of a statute give us one answer and extratextual considerations suggest another, it's no contest. Only the written word is the law, and all persons are entitled to its benefit." *Bostock*, 140 S. Ct. at 1737. A.M. has shown – along with satisfying the other requirements for the issuance of a preliminary injunction – that she has a likelihood of succeeding on the merits of her claim that § 20-33-13-4 violates Title IX. Accordingly, the Court **GRANTS** A.M.'s Motion for Preliminary Injunction, [8]. The Court also **DENIES** the Motion for Leave to File Brief of Amici Curiae From Five Female Athletes in Support of Defendant-Intervenor the State of Indiana, [31], **DENIES AS MOOT** the State's Motion to Exclude Opinions of Fortenberry, [38], **DENIES AS MOOT** A.M.'s Motion to Exclude Expert Testimony, [47], and **DENIES AS MOOT** the State's Motion for Leave to File Surreply in Opposition to Plaintiff's Motion to Exclude Expert Testimony, [59]. IPS and the Superintendent are **PRELIMINARILY ENJOINED** until further order of this Court from applying Indiana Code § 20-33-13-4 to prohibit A.M. from playing on the girls' softball team. The injunction shall issue in a separate Order.

All Citations

--- F.Supp.3d ----, 2022 WL 2951430

Footnotes

1 As discussed more fully below, gender dysphoria occurs when a transgender person experiences a constant sense of distress because of the incongruence between their experienced gender and their birth-assigned sex. [Filing No. 8-1 at 4.]

2 The State has filed a Motion for Leave to File Surreply in Opposition to Plaintiff's Motion to Exclude Expert Testimony. [Filing No. 59.] Because the Court denies as moot A.M.'s Motion to Exclude, it also **DENIES AS MOOT** the State's Motion for Leave to File Surreply. [Filing No. 59.]

Subject: RE: New CRC position
Attachment(s): "JD ERF Clinical Research Coordinator.doc"

Hi Steve,

For new staff recruitments, we will need to submit an essential hire request to the department to approve. The information I need for that is included below. I'll also need you to complete the attached Job Description (JD). You'll also want to make sure you have enough funding to support this position. Please provide me with the funding source you would like to use?

Once you complete the JD and the essential hire request information, I'll submit it to the department for approval. After the department approves, I will then submit new hire requests to HR. They will then post the positions in BrassRing and you will manage the search process.

Info needed for essential hire request.

- Are these new or replacement positions
- Type
  - Full Time
  - Part Time
  - Contract
  - Limited
- Job Code
- Job title
- Briefly describe the position's responsibilities
- %FTE for the position
- Supervisor name
- Funding Source for Position*
  - *Only positions with 100% confirmed funding will be approved. Please list the confirmed funding sources - include percent effort, Fund-DeptID-Project and if applicable, start & end dates.*

Let me know if you have any questions.

Best,

[redacted]

Dear Steve, thank you very much

Yes, we had a kind answer from [redacted] several months ago. We would just like to see if you were reconsidered without COVID restriction, by 2023
I am going to talk with [redacted] about the chance to do telemedicine with you. Is a great possibility for me too!

Moreover, if you could invite us to any education talk (o line) could be great!

Are you travelling to Buenos Aires in March?
Thank you very much to all your group for the support!

Also, I am sending a small study about quality of life in chilean children with gender diversity

regards!

Hi [redacted]

I wanted to be sure you saw the message that I just received from [redacted]. I'm sorry that as of now, UCSF is still not accepting international observerships due to COVID restrictions. I would recommend inquiring again at the beginning of 2023.

[redacted]:
Is there the possibility for [redacted] to observe remotely, via Telehealth? We anticipate that we will likely still have some of our Child and Adolescent Gender Center (CAGC) clinics by Telehealth (Tuesday afternoons starting at Noon, Pacific Time) in the March-May, 2023 time-frame. I'm not sure if this would be of interest, but just wanted to suggest this possibility.

Thanks,

Steve

Dear [redacted]

Feliz Año Nuevo!

I hope you are doing well! Thanks for your inquiry about an observership for our Child and Adolescent Gender Center (CAGC) for your resident, [redacted]. Access to the CAGC is through an elective in Pediatric Endocrinology. Currently, the CAGC meets 2 half-days/week (we will likely be expanding to 3-4 half-days/week in the coming year). Currently, to the best of my knowledge, UCSF is not accepting foreign trainees because of Covid; however, this situation may hopefully change during March-May, 2023. I have cc'd [redacted] and [redacted], who can provide additional information.

Best wishes,

Steve

Hi Steve,

So good to be with you a few weeks back. The GnRHa R01 team would love to meet with you in the near future. We have a number of critical topics to discuss with you.

Our network meets on Wednesdays at 2pm Eastern (11am Pacific). Might this time ever work?

We'd have openings on either of the dates below, or we could look at December:

November 2nd
November 9th

Thanks!

Hi [redacted], Steve and [redacted],

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Subject: RE: New CRC position

Hi Steve,

For new staff recruitments, we will need to submit an essential hire request to the department to approve. The information I need for that is included below. I'll also need you to complete the attached Job Description (JD). You'll also want to make sure you have enough funding to support this position. Please provide me with the funding source you would like to use?

Once you complete the JD and the essential hire request information, I'll submit it to the department for approval. After the department approves, I will then submit new hire requests to HR. They will then post the positions in BrassRing and you will manage the search process.

Info needed for essential hire request.

- Are these new or replacement positions
- Type
  - Full Time
  - Part Time
  - Contract
  - Limited
- Job Code
- Job title
- Briefly describe the position's responsibilities
- %FTE for the position
- Supervisor name
- Funding Source for Position*
  - *Only positions with 100%confirmed funding will be approved. Please list the confirmed funding sources - include percent effort, Fund-DeptID-Project and if applicable, start & end dates.*

Let me know if you have any questions.

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Subject: Re: CSW II/III Job Description

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Subject: Re: CSW II/III Job Description

Yes that is what [redacted]'s level actually is so we should write the job that way. He is currently a 1. If we put 2-3 he won't qualify

Subject: Re: CSW II/III Job Description

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Dear NIH team, Dr. [redacted] and Ms. [redacted],

Christina Jewett and Megan Twohey here, from The New York Times.

We are preparing to publish a story on the use of puberty blockers on transgender adolescents that we have been working on for many months.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

The story includes some information related to the big N.I.H. multi-site study on blockers and hormone treatment:

–In a 2014 funding proposal to the National Institutes of Health, four prominent American gender clinics pointed out that the United States had never produced data on the physiological and mental health impact, safety and tolerability of the drugs, particularly among transgender patients under 12, leaving a "gap in evidence for this practice."

–Awarded nearly $8 million to examine the effects of blockers and sex hormones, the investigators have yet to report on key outcomes of treatment.

– A child in the N.I.H. study who started blockers at age 8, developed "significant osteopenia," and switched to hormone treatment at 11 "to support bone health," according to investigator reports submitted to the N.I.H.

Please let us know any of the information is inaccurate.

Also, we know that the N.I.H investigators have produced some reports out of their study – such as baseline measures, telehealth dynamics and height velocity. **But why have they yet to report on key *outcomes* of treatment, such as the effects of blockers on mental health and bones (Aim 1)?**

Do you have any comment on the case of the 8-year-old study participant who was put on CSH as a result of developing osteopenia, per the 2019 study update?

Please let us know.

Our deadline is close of business Friday.

If we don't hear back, we will say you declined to comment.

Best,
Christina & Megan

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted]

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers,

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Subject: RE: New CRC position

Hi Steve,

For new staff recruitments, we will need to submit an essential hire request to the department to approve. The information I need for that is included below. I'll also need you to complete the attached Job Description (JD). You'll also want to make sure you have enough funding to support this position. Please provide me with the funding source you would like to use?

Once you complete the JD and the essential hire request information, I'll submit it to the department for approval. After the department approves, I will then submit new hire requests to HR. They will then post the positions in BrassRing and you will manage the search process.

Subject: RE: New CRC position

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

Hi Steve,

For new staff recruitments, we will need to submit an essential hire request to the department to approve. The information I need for that is included below. I'll also need you to complete the attached Job Description (JD). You'll also want to make sure you have enough funding to support this position. Please provide me with the funding source you would like to use?

Once you complete the JD and the essential hire request information, I'll submit it to the department for approval. After the department approves, I will then submit new hire requests to HR. They will then post the positions in BrassRing and you will manage the search process.

Info needed for essential hire request.

- Are these new or replacement positions
- Type
  - Full Time
  - Part Time
  - Contract
  - Limited
- Job Code
- Job title
- Briefly describe the position's responsibilities
- %FTE for the position
- Supervisor name
- Funding Source for Position*
  - *Only positions with 100% confirmed funding will be approved. Please list the confirmed funding sources - include percent effort, Fund-DeptID-Project and if applicable, start & end dates.*

Let me know if you have any questions.

Best,

[redacted]

Subject: New CRC position

Hi [redacted],

We would like to initiate a job search for a new part-time CRC position at 40% effort. This will be someone that [redacted], cc'd here, and I will both supervise. Please let us know how to proceed. We will be happy to complete the job description portions.

Thanks,

Steve

Hi [redacted],

Thanks for your quick response to this request. I am working on gathering this information and will get it back to you as soon as possible.

Per your first bullet point, would this be a new position, since it is in addition to the position I am currently in? Even though it's technically the same position?

Thanks for your guidance,
[redacted]

Subject: Re: New CRC position

Hi [redacted],

[redacted] and I will provide all of the requested information. As you know, [redacted] is currently 100% FTE as CRC. This 100% effort is fully funded by our NIH grant through 1/31/2026. We are looking at decreasing [redacted]s CRC effort by 40% and simply using those same funds to pay for a new part-time CRC at the same 40%.

Thanks,

Steve

Subject: Re: Final Qs on Trans Youth Care study --

Thanks, [redacted]

[redacted]

OK, [redacted] and I have now reviewed all UCSF participants in both cohorts.
First, with respect to the blocker cohort, we did not start a blocker on anyone age 8 years. The youngest participant in the blocker cohort from our site was 9 years, 3 months, and this individual did not develop osteopenia. Second, with respect to the GAH cohort, we had 7 participants who entered into the study having been previously treated with a blocker. None of these 7 participants started a blocker at 8 years of age, but were significantly older.

The email from the NYT reporters states the following:

> *– A child in the N.I.H. study who started blockers at age 8, developed "significant osteopenia," and switched to hormone treatment at 11 "to support bone health," according to investigator reports submitted to the N.I.H.*
>
> Please let us know any of the information is inaccurate.
>
> Do you have any comment on the case of the 8-year-old study participant who was put on CSH as a result of developing osteopenia, per the 2019 study update?

Here is the relevant text from the 2019 study update:

"Within the CSH cohort, 311 participants have been enrolled across all study sites. Participants range in age from 11 to 20 years old, with a mean age of 16 +/- 1.9 years. Participants aged 13 and older made up 98% of the CSH cohort. **The single 11-year-old who enrolled in the study was receiving cross-sex hormones in order to support bone health due to significant osteopenia. "**

This participant was not previously treated with a blocker at age 8, so the information described by the NYT reporters is incorrect.

[redacted]

In terms of the 24 month f/u bone paper, they can be told (as previously communicated to them through our email to the NIH) that the data analysis and related manuscript preparation are underway, and we are targeting December for manuscript submission.

Thanks,

Steve

Dear [redacted] and [redacted],

[redacted], cc'd here, let me know that she has tried multiple times to contact you for an update on the status of [redacted], PhD, as the leading candidate for the CAGC Psychologist position. Dr. [redacted] checked in with Dr. [redacted] today and he noted that after many interviews quite a while ago he hasn't heard anything about next steps from UCSF. Quite some time ago, we were told that he would be onboarded by the beginning of November. As that's now less than a month away, we would be grateful if you could please reply to this email and let us know where things stand with Dr. [redacted]. As you know, we are in urgent need of onboarding a psychologist for the CAGC.

Thanks and best wishes,

Steve

Subject: RE: New CRC position

Hi Steve,

For new staff recruitments, we will need to submit an essential hire request to the department to approve. The information I need for that is included below. I'll also need you to complete the attached Job Description (JD). You'll also want to make sure you have enough funding to support this position. Please provide me with the funding source you would like to use?

Once you complete the JD and the essential hire request information, I'll submit it to the department for approval. After the department approves, I will then submit new hire requests to HR. They will then post the positions in BrassRing and you will manage the search process.

Info needed for essential hire request.

- Are these new or replacement positions
  Splitting already existing position
- Type
  - Full Time
  - Part Time
  - Contract
  - Limited
- Job Code 9335
- Job title Clinical Research Coordinator
- Briefly describe the position's responsibilities
  The CRC will execute, manage, and coordinate research protocols, as directed by the Clinical Research Supervisor and/or Principal Investigator (PI) for the Trans Youth Care Study. Duties may include, but will not be limited to: understanding the regulatory, institutional, sponsor and protocol requirements for the study; recruiting and screening potential participants; conducting all aspects of the informed consent process with potential participants; scheduling and managing study participant study visits; collecting data from participants' medical records and entering it into study database.
- %FTE for the position
  40%
- Supervisor name
  Stephen M. Rosenthal, MD
- Funding Source for Position*
  - *Only positions with 100% confirmed funding will be approved. Please list the confirmed funding sources - include percent effort, Fund-DeptID-Project and if applicable, start & end dates.*

  NIH Grant, award number A138395, Trans Youth Care study. 40% FTE through 1/31/2026

Let me know if you have any questions.

Best,

[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let M[redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]'s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let M[redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is 69160BR). Please let [redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers,

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hello Dr. Rosenthal and Dr. [redacted],

Thanks, [redacted], for your introduction. I write stewardship reports for UCSF, and I am eager to talk to you both about this gift. It can be difficult to interview two people at the same time -- so if I can focus on one person for one part of the story and the other person for the other part of the story, that might be the most efficient way to handle this. And if you would both like to be present for the entire interview -- that's fine.

If you could send me times and days that you are both available during the next week -- that would be greatI would like to handle this interview before Oct. 25 because I will be gone for a week starting Oct. 26. I hope that doesn't make this too inconvenient.

I look forward to hearing from you.
Thanks so much,
[redacted]

Good morning Steve and [redacted],

I'd like to introduce you to my esteemed colleague [redacted] who is drafting a stewardship report for [redacted]. You might recall Mr. [redacted] gave last year per [redacted]'s request.

[redacted] would like to speak with you about the highlights that should be included. I suggested:

- Established new position Director of Advocacy and recruited highly sought-after candidate
- Moving into the Pritzker building
- Hiring for a new position Director of Education
- Strengthened community partnership with Mind the Gap
- Hired [redacted], RN, who is fluent in Cantonese and English.

I will not be part of the meeting with you and [redacted], so I will defer to her on scheduling.

Best,
[redacted]

When: Saturday, October 29, 2022 11:00 AM-2:00 PM.
Where: TBD

Dear Esteemed and Treasured Colleagues,

We are excited to finally gather and reconnect for our postponed 10-year anniversary of the UCSF Child and Adolescent Gender Center! Thank you all for your past and ongoing contributions to the UCSF CAGC - it's wonderful to see how this program has grown over the years. We plan to have an in-person lunch celebration in Dogpatch/Potrero Hill near the Mission Bay campus (location to be confirmed after we hear back about whether we have the Rooftop of the new Nancy Friend Pritzker Psychiatry Building reserved). Please save-the-date and be on the lookout for additional details to come!

Please RSVP so we can get an approximate headcount for food. We are so grateful to the UCSF Division of Pediatric Endocrinology for supporting our clinic and sponsoring this celebration - THANK YOU, [redacted]!

Why: To celebrate the 10-year anniversary of the UCSF Child and Adolescent Gender Center
When: Saturday, 10/29/2022 from 11:00am-2:00pm
Where: TBD in SF Dogpatch/Potrero Hill

Lunch will be served - please send me food allergies or restrictions if you plan to join!

Best,
[redacted], Steve, [redacted] & [redacted] (CAGC Party Planning Committee!)

Subject: Re: CSW II/III Job Description

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let M[redacted] know that she can apply. You will need to interview 2 other people as well. [redacted] is the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Obtained via CPRA by Judicial Watch, Inc.

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Subject: SAVE THE DATE: UCSF Child and Adolescent Gender Center 10-Year Anniversary Celebration
When: Saturday, October 29, 2022 11:00 AM-2:00 PM.
Where: TBD

Dear Esteemed and Treasured Colleagues,

We are excited to finally gather and reconnect for our postponed 10-year anniversary of the UCSF Child and Adolescent Gender Center! Thank you all for your past and ongoing contributions to the UCSF CAGC - it's wonderful to see how this program has grown over the years. We plan to have an in-person lunch celebration in Dogpatch/Potrero Hill near the Mission Bay campus (location to be confirmed after we hear back about whether we have the Rooftop of the new Nancy Friend Pritzker Psychiatry Building reserved). Please save-the-date and be on the lookout for additional details to come!

Please RSVP so we can get an approximate headcount for food. We are so grateful to the UCSF Division of Pediatric Endocrinology for supporting our clinic and sponsoring this celebration - THANK YOU, [redacted]!

Why: To celebrate the 10-year anniversary of the UCSF Child and Adolescent Gender Center
When: Saturday, 10/29/2022 from 11:00am-2:00pm
Where: TBD in SF Dogpatch/Potrero Hill

Lunch will be served - please send me food allergies or restrictions if you plan to join!

Best,
[redacted], Steve, [redacted] & [redacted] (CAGC Party Planning Committee!)

Sent: Friday, October 14, 2022 2:47 PM
To: 'Christina Jewett' <christina.jewett@nytimes.com>
Subject: RE: Final Qs on Trans Youth Care study -- (EXTERNAL EMAIL)

Hi Christina,

Here's clarification on the following statement you provided:

- *A child in the N.I.H. study who started blockers at age 8, developed "significant osteopenia," and switched to hormone treatment at 11 "to support bone health," according to investigator reports submitted to the N.I.H*

This statement is incorrect. There is no such participant in our study.

Hi [redacted], Steve and [redacted],

I spoke with [redacted], [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.

** If you happen to get other candidates that seem qualified please forward them to me as we are also hiring for a 90% within the Pediatric Social Work department that would be dedicated to the gender clinic.

Thank you,
[redacted]

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Subject: Re: CSW II/III Job Description

Hi [redacted] and Steve ..

Obtained via CPRA by Judicial Watch, Inc.

Obtained via CPRA by Judicial Watch, Inc.

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Subject: RE: CSW II/III Job Description

Hi Steve and [redacted],

The Clinical Social Worker I/II position we created for [redacted] is live and in BrassRing now (the req # is69160BR). Please let M[redacted] know that she can apply. You will need to interview 2 other people as well. [redacted]s the resume receiver for the position. The position must stay open for 14 days, then I can submit the new hire request to HR for [redacted]. I've included the link to the position for you below.

@[redacted] can you send the candidate list along with resumes to Steve and [redacted], so they can interview 2 other candidates aside from [redacted]?

External job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5861&Areq=69160BR
Internal job link: https://jobs.brassring.com/TGnewUI/Search/home/HomeWithPreLoad?PageType=JobDetails&partnerid=6495&siteid=5862&Areq=69160BR

Feel free to let me know if you have any questions.

@[redacted] Please let me know once [redacted] applies.

Best,

[redacted]

Obtained via CPRA by Judicial Watch, Inc.

Yes that is what [redacted]'s level actually is so we should write the job that way. He is currently a 1. If we put 2-3 he won't qualify

Subject: Re: CSW II/III Job Description

Thank you. Just making sure also you saw the thread that it is a clinical social worker I/II and he is a I at this time
It was put in as an error II/III

Please verify with HR

Should be

Clinical Social Worker I/II

And he is a level I

Thank you!

Obtained via CPRA by Judicial Watch, Inc.

Hi [redacted] and Steve ..

I'm working intermittently..

Everything looks good except the Level.

For Clinical Social Worker 2 you need a minimum of 3 yrs and registered with BNS etc

So It should be written as a CSW I/Ii and [redacted]s pay scale would qualify as a Level I

It will still be more than the research pay scale so the .2 will be at CSW I

Please remember to mark this as paid from the SFDPH grant and is temp ending 6/30/2023 - please make sure this .2 is not coming from the permanent Pedi SW budget

It could be renegotiated with Pedi Endocrine after the grant cycle ends should they wa T to use other funds.

Otherwise all tasks and descriptions look good.

Thank you

Subject: CSW II/III Job Description

Hi [redacted],

Here is the revised job description for CSW II/III, as approved by [redacted]

The Clinical Social Worker II/III is a temporary 0.2/FTE position housed in Pediatric Endocrinology and specifically assigned to the Child and Adolescent Gender Center. The Clinical Social Worker II/III will primarily assist in psychosocial assessments and follow up on case management needs for clinic patients residing in the City and County of San Francisco and other duties as needed. Clinical case management tasks can include but are not exclusive to linkage to resources, obtaining gender and psychosocial timelines, parent support, coordination of care outside and within CAGC providers, insurance denials/advocacy, support group facilitation, and curating talks for families on varied gender care topics. The Clinical Social Worker II/III will track data of who is served and solicit and compile feedback from direct patient care services and training events. The Clinical Social Worker II/III will work exclusively on the CAGC – DPH partnership under the supervision of the Director of Community Based Clinical Services and Training/CAGC Clinical Social Worker. As indicated, the Clinical Social Worker II/III can receive BBS clinical hours under this supervision for all tasks that are defined under clinical case management/direct service. The Clinical Social Worker II/III will attend the weekly CAGC- DPH team meeting and may also be assigned tasks from the CAGC Director of Community Based Programs. The position may include both remote and on-site tasks and it is understood the position is considered "hybrid" for this reason. To that end, the Clinical Social Worker II/III will need remote access to direct patient care information to properly assess all needs including risk or barriers to healthcare access.

Thanks,

Steve

Dr Rosenthal,

Megan Twohey here again, from The Times.
Thank you again for taking so much time to talk last week. Christina and I really appreciated it.
Wanted to circle back to see if you'd have a half hour to hop back on the phone with me this week. I'd value hearing more about the benefits of puberty-blockers (we spent a lot of time talking about bones!). And hearing about the formation of the 2017 guidelines crafted by the endocrine society.
I'm on vacation through Wednesday. Would you perhaps have some time Thursday?
Please let me know.
And thanks again for your assistance!
Best,
Megan

Dr. Rosenthal,

Megan Twohey here again, from The Times.
I hope this email finds you well.
I'm finally finishing up my story on the use of puberty blockers and I'd value the chance to go over the quotes in the story from you.
Do you have time to talk today or tomorrow? It need not take long!
My deadline is Wednesday.
Please let me know!

Best,
Megan

Hi [redacted] and Steve,

Should I reach out to [redacted] to apply? [redacted] has not applied. Here is the screen shot of the applicants who have applied.

Best,

[redacted]

Thank you for the update [redacted], greatly appreciated! [redacted] still needs to apply. Can you please inform them to apply so I can move forward with HR on next steps?

Best,

[redacted]

Hi [redacted], Steve and [redacted],

I spoke with [redacted] and [redacted].

As you know from my previous email the other candidate [redacted] had no relevant experience for this 20% role and if Steve was interested for research he can follow up there.

My pick is [redacted]. [redacted] has since accepted another position and [redacted] did not have enough relevant experience.

let me know if. we need to do anything else in the process or if we can indeed move ahead and offer [redacted] the 20%.
